Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; abdominal pain - rt upper quad

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; abdominal pain, gas, bloating

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Abdominal pain, irritable bowel syndrome. medicine is not helping and pain is getting worse. Gas pattern large amount of stool present.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Abnormal Abdominal Ultrasound. Recommended CT for the patient

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; abnormal ultrasound

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; ADDITIONAL CLINICAL NOTES WILL BE FAXED IF NEEDED.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; C/O PAIN INHISRIGHT LOWER QUAD 1 WEEK  STILL PRESENT NOW BUT NOT AS SEVERE NO NAUSEA OR VOMITING

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; chronic ABD and Pelvic, and work up done

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Constipation lower right quad pain

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Esophageal Reflux: Follow up, still gets heartburn occasionally, feels better with the nexium, but within 3 days the heartburn comes back. reports nexium worked better than omeprazole but still having a weird sensation in her epigastric region.  Nausea

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; gall bladder symptoms

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; generlized left sided abdominal tenderness. HPI    Abdominal Pain   Reported by patient.  Location: generalized - LUQ but also periumbilical and sometimes llq  Quality: pain; bloating; cramping; tender Severity: moderate  Duration: intermitte

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; gradual onset right lower abd/groin pain it pulls with running or any strenuous activity, he cannot do set ups do to pain

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; groin pain". He has seen a urologist and was not found to have problem He has continued to have the pain

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; HAS HISTORY OF DIVERTICULOSIS WITH SUSPECTED DIVERTICULITIS.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Looking for blood clot, History of blood clots. superficial thrombophlebitis in the abdomen

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; none

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; pain

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; pain for 2 months for several hours, GYN negative

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient complains of abdominal pain in the RLQ, pain started 10-28-2015. Patient has presented today with same symptoms without any relief. The area is tender to touch, pain radiated and is positional.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; patient feels swollen inside & Malaise and fatigue

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient has a family history of Adrenal cancer and has concerns that she might have this

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient has had diarrhea, abdominal pain and low grade fever for three months

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient has previously had a lump removed from her stomach and it is now hurting at scar site.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; patient has recurrent abdominal pain, changes in bowel habits.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; PATIENT HAS UNEXPLAIN LOWER ABDOMINAL PAIN AND HAD ULTRASOUND DONE BUT NOTHING FOUND.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; patient having pain and tenderness ruq at burney's point

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; patient is diabetic and in pain for 3 months and getting worse

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient is experiencing abdominal pain and change in bowel habits. Patient is also type 2 diabetic.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; patient is experiencing abdominal pain and is also reporting nausea, we are wanting to rule out diverticulitis. In office tenderness upon palpation was noted.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient is having left lower quadrant pain. She states having felt a golf ball size mass in her left side but it has since gone away.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient is having severe abdominal pain for 6 weeks. Includes a lot of gas.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Patient is suprapubic pain, urinary frequency, urinary urgency, urinary leaking, and low back pain.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Persistent gastric pain and burning, difficulty swelling, some weight loss, r/o diverticulitis

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Possible Hernia.; Pain for 3 weeks.; Periumbilical abdominal pain.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Pt. has ABD pain, with rebound tenderness, pain at Mcburney's point with nausea/vomiting.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; r/o a bowel obstruction

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; right sided abdominal pain

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; right sided abdominal pain, especially with lifting. Need to rule out Hernia

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; RLQ ABD PAIN.; MENOPAUSAL SINCE DEC 2014.; STILL HAS APPENDIX

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; She will need an EGD to further evaluate her right upper quadrant tenderness, although doctor suspects she has some adhesions causing her discomfort.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; suspected diverticulitis

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; This patient came in today as a new patient. Sharon's chief complaint was that she was constipated with a history of adhesion that had blocked her colon. She was also complaining of abdomen pain. Also, her bowel movements have been normal.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; unexplained abdominal pain

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Will fax

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement; <Enter Additional clinical information >

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement; abdominal distension, splenomegaly palpitated by physician on exam

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; Suspicious Mass or Tumor

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; It is not known if there is a suspicion of an adrenal mass.; It is not known if this is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor;

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is not a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor; Pt is having increasing pain in the lower abdomen hurting into the left lower back. Pt has tenderness on palpation.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has been a recent previous abdominal and or pelvis CT scan.; This would be a repeat of a CT of the abdomen and or pelvis within 6 weeks.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.; low density area of the tail of the pancreas found in 2011

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.;

Radiology Services Denied Not Medically Necessary

unknown; This is a request for an abdomen-pelvis CT combination.; The reason for the study is none of the listed reasons.; It is not know if this study is being requested for abdominal and/or pelvic pain.; It is not known if the study is requested for hematuria. This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; A abnormality was found on the pancreas during a previous CT, MRI or Ultrasound.

Radiology Services Denied Not Medically Necessary

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.; patient has had 2 siblings die from pancreatic cancer this year and it was recommended that she be screened with mri

Radiology Services Denied Not Medically Necessary

; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

blood pressure issues  medication was given; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

chest pain on exertion; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; It is not known whether the patient has one or more of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

chest pain with shortness of breath and diaphoresis. c/o cough, pain is pleuritic. Relieved by rest or with nitroglycerin.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has not had other testing done to evaluate new or changing symptoms.; The patient has 1 or less cardiac risk factors; The study is not requested for pre op evaluation, cardiac mass, CHF, septal defects, or valve disorders.; There are new or changing cardiac symptoms including atypical chest pain (angina) and/or shortness of breath.; The study is requested for suspected coronary artery disease.; The member has known or suspected coronary artery disease.; The BMI is not know

Radiology Services Denied Not Medically Necessary

chest pain x's two weeks. ekg shows a right bundle branch block. needs stress test for further evaluation; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

Chest Pain, shortness of breath , COPD; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

chest pain; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

COPD and HTN. She has occasional spells of chest pressure and pain, they are so bad that she gets SOB. She can usually eat a spoonful of mustard and it will help. She works as a house keeper and does not have the pain with exertion of cleaning. At times s; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

dizzy spell and fell; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Patient has been in the hospital previously for chest pain and shortness of breath.; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Patient is having precordial, atypical chest pain, with pain noted in left arm.; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Patient was hospitalized for blood clots, having achy pain in left arm that radiates to neck.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has not had other testing done to evaluate new or changing symptoms.; The patient has 2 cardiac risk factors; The study is not requested for pre op evaluation, cardiac mass, CHF, septal defects, or valve disorders.; There are new or changing cardiac symptoms including atypical chest pain (angina) and/or shortness of breath.; The study is requested for suspected coronary artery disease.; The member has known or suspected coronary artery disease.; The BMI is 30 to 39

Radiology Services Denied Not Medically Necessary

Pt reports chest tightness on and off for the past couple of weeks. Sometimes she gets short of breath with minimal exertion. Fam hx of CAD in both grandfathers, mother has HTN. She is fatigued and under increased stress at work. Wakes up with her heart r; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

shortness of breath episodes that last 20-30 minutes; The patient's age is between 45 and 64.; The patient has had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

The patient comes in for followup. She feels like her throat is closing up. She states it is almost like a pain that grabs her throat. She has had this at rest after stress. She also had it during walking one time. She denies any specific chest pain but t; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

unknown; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Unknown; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Soft Tissue Sarcoma, Pancreatic or Testicular Cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lung Cancer.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/9/2015; It is not known if there has been any treatment or conservative therapy.; chest pain and radioing to left should, left arm and right jaw, nausea and shortness of breathe and dizziness for about 15 minutes, had before

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 06/072015; It is not known if there has been any treatment or conservative therapy.; dizziness/headache/ low BP/ fatigue unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/19/2015; There has been treatment or conservative therapy.; Chronic chest pain. Abnormal EKG. Palpatations.; EKG.Hydrocoton. Nuerotin Norvask Trimadol.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Low Dose CT for Lung Cancer Screening (S8032); No, I do not want to request a Chest CT instead of a Low Dose CT for Lung Cancer Screening (S8032).; The patient is presenting with pulmonary signs or symptoms of lung cancer or there are other diagnostic test suggestive of lung cancer.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has NOT had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; The patient is 54 years old or younger.

Radiology Services Denied Not Medically Necessary

Current smoker, 30 pack years smoking history; This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has NOT had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; The patient is 54 years old or younger.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

n.a; This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has NOT had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; The patient is between 55 and 80 years old.; It is unknown if this patient is a smoker or has a history of smoking.; The patient is NOT presenting with pulmonary signs or symptoms of lung cancer nor are there other diagnostic test suggestive of lung cancer.

Radiology Services Denied Not Medically Necessary

She continues to complain of nausea, vomiting, diarrhea and RUQ pain for 3 months. She has noted these symptoms to be worse with fried or greasy foods. We did order labs and an Abdominal US recently that were within normal limits.; This is a request for MRCP.; There is no reason why the patient cannot have an ERCP.

had seizure and fell 11/14/15, blurred vision on the left eye ever since the fall; This is a request for a brain/head CT.; The study is requested for new onset of seizures or newly identified change in seizure activity or pattern.

This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient has one sided arm or leg weakness.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for trauma or injury.

possible bulging disc; This is a request for cervical spine MRI; Trauma or recent injury; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; severe djd, numbness and tingling down the arm; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc.; There are clinical findings or indications of unexplained weight loss of greater than 10% body weight in 1 month

Rebound. expecting appendicitis; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were abnormal.

This is a request for an abdomen-pelvis CT combination.; There are NO abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; This study is being ordered for another reason besides Crohn's disease, Abscess, Ulcerative Colitis, Acute Non-ulcerative Colitis, Diverticulitis, or Inflammatory bowel disease.; There are no findings that confirm hepatitis C.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.; NONE

Radiology Services Denied Not Medically Necessary

looking for possible tear; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; It is not known if the patient has completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

S: Ms. Jesse is a 51 y/o female who has stage IIIC high grade serous of the ovary s/p 6 cycles of dose dense paclitaxel with carboplatin. She had a scan after completion of chemotherapy which showed residual disease, but decrease in size of pelvic mass. D; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

assessment prior to chemotherapy to see if treatment needs to be changed or stay the same.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Diagnosis: carcinosarcoma; Stage: stage IVB (lung mets) ; Surgeon: Dr Zorn ; Treatment: neoadjuvant carbo/taxol x 6 cycles with good response of lung lesions on PET scan, followed by debulking surgery (TAH/BSO/omentectomy/LOA/cystoscopy) on 3/12/15 and ; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Diagnosis: SCC of the cervix  Stage: IIB Surgeon: Dr. P. Moore (OSH)  Treatment: robotic hyst/BSO at OSH/chemoradiation completed 9/2014, carbo/taxol and avastin for 6 cycles for recurrence Complications: Recurrence   HPI   Ms. Smith is a 46 y; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist. This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

assessment prior to chemotherapy to see if treatment needs to be changed or stay the same.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

She had a scan after completion of chemotherapy which showed residual disease, but decrease in size of pelvic mass. D; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for an abdomen-pelvis CT combination.; The reason for the study is known tumor.; This study is being ordered for follow-up.; The patient is presenting new symptoms.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The patient is female.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is not a first follow up study for a post operative complication.; Pre-op or post op evaluation; post-op care

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has not been a recent abdominal and or pelvis CT scan.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; It is not known if there is a palpable or observed abdominal mass.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for Cervical Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; It is unknown why the study is being ordered.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

This is a request for a Pelvis MRI.; The request is for suspicion of pelvic inflammatory disease or abscess.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient does not have dizziness, fatigue or malaise, sudden change in mental status, Bell's palsy, Congenital abnormality, loss of smell, hearing loss or vertigo.; This study is being ordered for something other than trauma or injury, evaluation of known tumor, stroke or aneurysm, infection or inflammation, multiple sclerosis or seizures.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Enter answer here - or Type In UnknEvidence of disease, progression by CT PET 05/08/2015 own If No Info Given.; This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient does not have dizziness, fatigue or malaise, sudden change in mental status, Bell's palsy, Congenital abnormality, loss of smell, hearing loss or vertigo.; This study is being ordered for something other than trauma or injury, evaluation of known tumor, stroke or aneurysm, infection or inflammation, multiple sclerosis or seizures.

Enter answer here - or Type In UnknReturn for imaging:   Ct brain and CT/PET for restaging of breast cancer wn If No Info Given.; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected. Evaluation of patient with Esophageal Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing rec.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing records; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

has station 7 lymph node , test Is for staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI. Initial staging of patient newly diagnosed with Esophageal Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Procedure is needed for clinical trial. There is a 28 day window for results to be valid. Needing to get patient started on treatment ASAP.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Restaging Lymphoma; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

See Attachment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; The headache is described as a “thunderclap” or the worst headache of the patient’s life.; The patient does NOT have a recent onset (within the last 4 weeks) of neurologic symptoms.

This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; This study is being ordered for evaluation of known tumor.

This is a request for a brain/head CT.; The study is requested for known or suspected bleed such as subdural hematoma or subarachnoid bleed.

This is a request for a brain/head CT.; There is a suspected or known brain tumor.; The study is requested for known or suspected brain tumor, mass or cancer.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

mouth pain, tube is swollen and discolored; "This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is not a suspicion of neoplasm, tumor or metastasis.fct"; "There is not a suspicion of bone infection, [osteomyelitis].fct"; This is not a preoperative or recent postoperative evaluation.

This study is being ordered for a known or suspected tumor.; This is a request for a Sinus CT.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is immune-compromised.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

1) LYMPHADENOPATHY- Mr. Beckham is a middle aged gentleman who presented with syncopal episode. During work up, he was found to have HILAR AND MEDIASTINAL ADENOPATHY. His CT scan chest (6/11/13 @ WRMC) showed BILATERAL HILAR AND MEDIASTINAL LYMPHADENOPATH; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 06/11/2013; There has not been any treatment or conservative therapy.; His repeat CT N/C/A/P (8/28/14) showed STABLE minimally prominent cervical nodes-felt to be reactive, STABLE prominent mediastinal and hilar nodes previously seen, slightly prominent retroperitoneal nodes-STABLE since 7/10/13.

f/u; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months. faxing records.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing recs.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Follow up scans to evaluate response to current treatment and see if changes are needed.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Imaging PET-CT tumor skull thigh / head and neck: 9/22/15
IMPRESSION:  1. THERE IS NO FOCAL METABOLICALLY ACTIVE LESIONS SEEN IN THE HEAD AND  NECK AREA.  2. NO DEFINITE FOCAL METABOLICALLY ACTIVE ADENOPATHY SEEN IN THE CHEST  ABDOMEN PELVIS WIT; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

INITIAL STAGING; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Known Stage IV lung cancer, scans to evaluate disease response to current treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Procedure is needed for clinical trial. There is a 28 day window for results to be valid. Needing to get patient started on treatment ASAP.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

pt is currently having chemo they are doing treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Restaging after radiation; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Restaging Lymphoma; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Restaging of the chemotherapy.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

This is a request for neck soft tissue CT.; The study is being ordered for Follow Up.; The patient has a known tumor or metastasis in the neck.; The patient completed a course of chemotherapy or radiation therapy within the past 90 days.

This is a request for neck soft tissue CT.; The study is being ordered for Follow Up.; The patient has a known tumor or metastasis in the neck.; They have not had a previous Neck CT in the last 10 months.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.; There are NO new or changing symptoms in the neck.

This is a request for neck soft tissue CT.; There has been recent trauma or other injury to the neck.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is no suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is not a suspicion of an infection or abscess.; It is unknown if this is being ordered by an ENT specialist.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

will fax records; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

A patient with therapy-related MDS. He was diagnosed with multiple myeloma in May 2014, complex karyotype, MS molecular subtype. He was treated as per Total Therapy 5 protocol, however, no response after induction chemotherapy. Subsequently, he received; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months. There is not a suspicion of an infection or abscess.; This examination is being requested to evaluate lymphadenopathy or mass.; This is a request for a Face MRI.; There is not a history of orbit or face trauma or injury.

There is not a suspicion of an infection or abscess.; This examination is being requested to evaluate lymphadenopathy or mass.; This is a request for an Orbit MRI.; There is not a history of orbit or face trauma or injury.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

Will fax; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Will Fax; It is not known if there has been any treatment or conservative therapy.; Will FAX

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

2mm cut mri brain for SRS protocol.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has dizziness.; The patient has a sudden and severe headache.; The patient had a recent onset (within the last 3 months) of neurologic symptoms.

checking for tumor. Recently diagnosed with non small cell metastatic lung cancer. Further staging to check for METS to the brain.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; It is not known if the tumor is a pituitary tumor or pituitary adenoma.

Evaluation of patient with Cervical Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluation of patient with lung cancer; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Lymphoma.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Evaluation of patient with stage IV Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with stage IV Lung Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing rec.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing rec; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

follow up glioblastoma malformation has surgery 2012; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The patient has not undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are not recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; Surgery is not planned within the next 4 weeks.; An operation for shunt placement (for brain fluid drainage) is not being considered or a non-metallic shunt is not functioning correctly.; The patient has a congenital abnormality.

Follow up; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Initial staging of patient newly diagnosed with Gastric Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

initial staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Known small cell carcinoma with mental status change. Ruling out brain mets.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

Metastatic cancer to brain - Primary  -Pt likely has too many IC lesions to tx w/ GK radiosurgery. She will most likely require WBRT, but repeat MR imaging could be performed in 6 weeks to reassess for progression prior to committing to radiation treatm; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

MRI Brain to complete staging of metastatic pulmonary adenocarcinoma.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient is experiencing fatigue or malaise. newly diagnosed colon cancer, scans to complete initial staging workup.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

None; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Patient has a CA 27-29 of 65.7. Pain and new lesions in bone and lung suspicious for metastatic disease.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

Patient has Neuroendocrin carcinoma metastatic to bone and thoracic spine tumor.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

PET impression performed on 9/22/2015: 1. THERE IS NO FOCAL METABOLICALLY ACTIVE LESIONS SEEN IN THE HEAD AND NECK AREA.; 2. NO DEFINITE FOCAL METABOLICALLY ACTIVE ADENOPATHY SEEN IN THE CHEST; ABDOMEN PELVIS WITH RESOLUTION OF THE ACTIVITY SEEN PREVIO; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

pt has pulmonary nodule.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

Pt with primary breast cancer and brain mets with new onset of headache.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is not a new and sudden onset of a headache less than 1 week not improved by medications.; It is not known if there is a family history (parent, sibling, or child) of stroke, aneurysm, or AVM (arteriovenous malformation)

Pt. has non small cell lung cancer stage 4, secondary bone and brain cancer and having cycle 6 of her CHEMO today.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

response to treatment. Patient had SRS for brain tumor and is continuing on the tamoxifen; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Scans to evaluate disease response to treatment and to see if known brain mets are needing radiation.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

See attachment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Stage IV lung cancer with brain mets. Completed radiation to the brain late 08/2015. Currently on chemotherapy treatment. Tests are to evaluate disease response to treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing dizziness.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing vertigo

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for a tumor.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

will fax records; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

will fax recs.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Will fax; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Will Fax; It is not known if there has been any treatment or conservative therapy.; Will FAX

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. > no; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given > unknown; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given > Always feels tired . Dizzy spells. low abdominal pain; < Describe treatment / conservative therapy here - or Type In Unknown If No Info Given > CT of chest was given

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; It is unknown if other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 09/17/2015; There has not been any treatment or conservative therapy.; Pt is having abdominal pain and discomfort. Dr will be using procedure to stage cancer.

; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for Congenital Anomaly.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for Inflammatory/ Infectious Disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; faxing rec; There has not been any treatment or conservative therapy.; RUQ abdominal pain, liver lesion, & ground glass attenuation & 1cm hilar lymph node

1) LYMPHADENOPATHY- Mr. Beckham is a middle aged gentleman who presented with syncopal episode. During work up, he was found to have HILAR AND MEDIASTINAL ADENOPATHY. His CT scan chest (6/11/13 @ WRMC) showed BILATERAL HILAR AND MEDIASTINAL LYMPHADENOPATH; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 06/11/2013; There has not been any treatment or conservative therapy.; His repeat CT N/C/A/P (8/28/14) showed STABLE minimally prominent cervical nodes-felt to be reactive, STABLE prominent mediastinal and hilar nodes previously seen, slightly prominent retroperitoneal nodes-STABLE since 7/10/13.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.
A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

A f/u PET scan on 9/18/15 showed several retroperitoneal lymph nodes measuring up to 1.2cm so he subsequently had a robotic bilateral non nerve sparing retroperitoneal lymph node dissection on 10/19/15. Final pathology for his lymph node dissection sh; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Abnormal liver function and elevated tumor markers; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

check for recurrence of cancer; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

CLL: THE WHITE COUNT APPEARS TO BE INCREASING OVER THE PAST FEW MONTHS. DR. WANTING CT SCANS FOR SURVEILLANCE.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; It is unknown if imaging studies have been performed on the member in the past 3 months.

Doctor is wanting new baseline scans since previous scans were done 6 weeks ago.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Enter answer here - or Type ICT scan of chest with contrast at Baptist NLR for current smoker over 30pack per year, leukocytosis, erythrocytosis, Hep C and elevated liver function prior to return exam visit in 2 weeks. (need Monday appt for CT scan due to; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Enter answer here - or Type In Unknown If No Info Given; restaging ct scan for patient with known follicular lymphoma; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evalaution of patient with abnormal lung finds.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluate her response to treatment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Barrett's Esophagus.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Bladder Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Breast Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with cancer of the large intestine.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Cervical Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Cervical Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Coagulopathy.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/2014; There has been treatment or conservative therapy.; Evaluation of patient with Coagulopathy.; Coumadin

Evaluation of patient with Esophageal Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with groundglass opacity.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Evaluation of patient with Kidney Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluation of patient with lung cancer; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with lung nodules.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

evaluation of patient with lung nodules; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Rectal Cancer with Liver Mets.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with SPN.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with stage IV Colon Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Stage IV Kidney Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with stage IV Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

evaluation of patient with thyroid cancer; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

evaluation of pt with Malignant neoplasm of overlapping sites of corpus uteri; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

evaluation of pt with Malignant neoplasm of rectosigmoid junction, above perineal reflection; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

f/u; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing rec.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

faxing rec.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing rec; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing records.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing records.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

faxing records; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing records; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

follow up after chemo and radiation therapy for rectal cancer; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Follow up chemo therapy treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

follow up ct. bone metastasis; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Follow up of pulmonary nodules.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Follow up scans to evaluate disease response to current treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up scans to evaluate disease, worried there might be progression.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up scans to evaluate response to current treatment and see if changes are needed.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up scans to evaluate response to current treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Following up on known PE from several months ago to ensure no other problems.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Grade 3 chemo therapy on weekly carbo and taxol x12 cycles, had radiation, wanting to do another CT to check if lung lesion had decrease in size and document stability; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Having recurrent leukocytosis, anemia, and thrombocytosis.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately 09/2015; There has not been any treatment or conservative therapy.; Night sweats, weight loss, shortness of breath on exertion.

Imaging; PET-CT tumor skull thigh / head and neck: 9/22/15; IMPRESSION: 1. THERE IS NO FOCAL METABOLICALLY ACTIVE LESIONS SEEN IN THE HEAD AND NECK AREA. 2. NO DEFINITE FOCAL METABOLICALLY ACTIVE ADENOPATHY SEEN IN THE CHEST ABDOMEN PELVIS WIT; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Initial staging of patient newly diagnosed with Breast Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Initial staging of patient newly diagnosed with Endometrial Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

INITIAL STAGING; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Interval worsening of somewhat nodular interstitial opacity in the right upper lung as well as scarring/airspace opacity in the right lower lung which is pleural; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

just completed treatment this is a 3 month follow up patient is complaining of pain fever dizziness cough vomiting; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Known Hodgkin's lymphoma originating in the chest area. Patient complaining of chest pain that is similar to when she was initially diagnosed. CT to evaluate disease.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Known Stage IV lung cancer, scans to evaluate disease response to current treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

MEMBER IS A SMOKER WITH A CONSTANCE COUGH ABDOMIAL WEIGHT LOSS; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

METASTATIC ANDROGEN SENSITIVE PROSTATE CA: HE HAS BEEN ON ANDROGEN BLOCKADE. TAKE HAS TAKE 3 TREATMENTS OF TAXOTERE. PSA HAS GONE UP DESPITE THERAPY. DR. WANTING CT SCANS TO EVALUATE DISEASE.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; It is unknown if imaging studies have been performed on the member in the past 3 months.

Mr. Estes is a 65 year old male with pT3N2M0 Stage IIB pure seminoma of the left testicle status post inguinal orchiectomy. He received 2 cycle of cisplatin and etoposide both of which were complicated with two relatively prolonged hospitalizations. In bo; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

MRI breast.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Newly diagnosed cancer of the cecum. CT Chest was not done previously, needing one to complete initial workup.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

None.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

On 10/2 pt had a biopsy confirmed evasive carcinoma; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Patient has completed 3 of 6 cycles of chemo. Restaging needed to evaluate response to chemo.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

patient when to the ER and had ct chest; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/2/2015; There has not been any treatment or conservative therapy.; contipation, pain when breathing,

Patient with known Rectal Cancer, scan to evaluate disease.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Patient with newly diagnosed colon cancer. Doctor is wanting diagnostic CTs for baseline purposes so treatment response can be measured in the future. PET was done to rule out distant mets.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Patient's cancer progressed on last CT Scan performed. He was started on a new chemo regimen and treatment needs to be evaluated.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

persistent leukocytosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 9/28/15; There has not been any treatment or conservative therapy.; low white blood count leukocytosis back pain

PNEUMONIA/ELEVATED CRP DESPITE ANTIBIOTIC THERAPY; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Previous CT showing splenomegaly, lymphadenopathy; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Portohepatic lymph node swelling in past. CT to check to see if abdominal lymphadenopathy is worsening or improving.; There has not been any treatment or conservative therapy.;

Procedure is needed for clinical trial. There is a 28 day window for results to be valid. Needing to get patient started on treatment ASAP.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Pt had a previous CT and 3 lung nodules were found ranging in size from 4 to 7mm. Dr wants to follow up to see if size has changed.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

pt has a pulmonary nodule that MDO is following up on; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for none of the above.

pt is currently having chemo they are doing treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI. response to treatment. Patient had SRS for brain tumor and is continuing on the tamoxifen; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Restaging after radiation; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

restaging in a patient with known lung cancer with liver metastasis. last scans were 8-20-15; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging in a patient with known lung cancer, c/o cough and chest pain. patient has been taking chemotherapy.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging in a patient with unknown primary cancer. Basically nonsymptomatic. patient has been taking chemotherapy. This is to assess status of current disease.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.
Restaging Lymphoma; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Restaging of the chemotherapy.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Restaging prior to resection of liver mets. Late chemo given on 10/5/2015.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging. Last Pet CT scans were done 9-18-2015. patient c/o weakness and fatigue, nausea, vomiting, dysphagia.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Rising in CA 19-9 increasing. Suspected of DZ progression; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Scans to evaluate disease response to current treatment regimen.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Scans to evaluate disease response to treatment and to see if known brain mets are needing radiation.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

staging; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

surveillance. Patient has a gene mutation that puts her at risk for further cancer.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; patient has history of 2 cancers, breast cancer in 4/2006 and ovarian cancer in 2009; There has been treatment or conservative therapy.; fatigue.; surgery and chemotherapy for both cancers.

The ordering physician a Surgeon, Pulmonologist, or Cardiologist.; A Chest/Thorax CT is being ordered.; A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.; The study is being ordered for none of the above.; This study is being ordered for follow up trauma.

The Pt had a chest ct in Jan 2015 that showed a chest mass.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

There is no radiologic evidence of non-resolving pneumonia.; There is no radiologic evidence of asbestosis.; unknown; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; "There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is no radiologic evidence of a lung abscess or empyema.; There is no radiologic evidence of pneumoconiosis e.g. black lung disease or silicosis.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

unknown; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

UNKNOWN; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Unknown; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

will fax rec.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; faxing rec; There has not been any treatment or conservative therapy.; weight loss

will fax rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

will fax rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

will fax records; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

will fax records; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

; This study is not requested to evaluate suspected pulmonary embolus.; This study will not be performed in conjunction with a Chest CT.; This study is being ordered for Known Vascular Disease.; This is a post-operative evaluation.; There is physical evidence of re-bleed or re-stenosis.; Yes, this is a request for a Chest CT Angiography.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is requested to evaluate suspected pulmonary embolus.; Yes, this is a request for a Chest CT Angiography.

A patient with therapy-related MDS. He was diagnosed with multiple myeloma in May 2014, complex karyotype, MS molecular subtype. He was treated as per Total Therapy 5 protocol, however, no response after induction chemotherapy. Subsequently, he received; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Heterozygous hemochromatosis with H63D mutation. TIBC=260.0 on 10/19/15.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately late 2014.; There has not been any treatment or conservative therapy.; unknown

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING NEEDED PRIOR TO STEM CELL TRANSPLANT.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

This study is being ordered for a known tumor.; This study is being ordered for a known tumor.; The ordering physician is an oncologist, surgeon, pulmonologist, or cardiologist.; The ordering physician is an oncologist, surgeon, pulmonologist, or cardiologist.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; This study is being ordered for follow-up.; The patient is undergoing active treatment for cancer.; The patient is not undergoing active treatment for cancer.; This is a request for a chest MRI.; This is a request for a chest MRI.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Enter answer here - or Type In UnToni has multiple myeloma. She has not had a bone marrow. She had diffuse bony disease involving predominately the spine. She started out with a lambda light chain quantitative in the 5500 range that dates back to March ; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Follow up; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

He is currently on single-agent thalidomide. He has had issues with a UTI for which he received Levaquin together with prophylactic vancomycin. He is feeling somewhat more tired on the thalidomide. His counts are still not good. The hemoglobin is 1; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

LESION MEASURING 4.4 CM CENTERED AT THE RIGHT T10. Initial Staging Multiple Myeloma.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Patient is post chemo and MD is looking to see results of treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Pt had a restaging scan on 8/17. It showed a metastatic lesion in L2 but looks much improved as compared to the last scan. Her lytic lesions in thoracic spine have disappeared on the last scan. She will stop chemotherapy for now to help her recover and; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING AFTER CHEMO. RULE OUT RECURRENCE OF DISEASE; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING FOR MM RELAPSE; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging prior to stem cell transplant/post chemo; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

The patient is not presenting new symptoms.; This study is being ordered for follow-up.; This is a request for cervical spine MRI; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; The last spine MRI was performed more than 6 months ago.; Known Tumor with or without metastasis

The patient is presenting new symptoms.; This study is being ordered for follow-up.; This is a request for cervical spine MRI; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; Known Tumor with or without metastasis

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for staging.; This is a request for cervical spine MRI; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; Known Tumor with or without metastasis

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Enter answer here - or Type In UnToni has multiple myeloma. She has not had a bone marrow. She had diffuse bony disease involving predominately the spine. She started out with a lambda light chain quantitative in the 5500 range that dates back to March ; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Follow up; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

He is currently on single-agent thalidomide. He has had issues with a UTI for which he received Levaquin together with prophylactic vancomycin. He is feeling somewhat more tired on the thalidomide. His counts are still not good. The hemoglobin is 1; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

LESION MEASURING 4.4 CM CENTERED AT THE RIGHT T10.; Initial Staging Multiple Myeloma.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Patient is post chemo and MD is looking to see results of treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Pt had a restaging scan on 8/17. It showed a metastatic lesion in L2 but looks much improved as compared to the last scan. Her lytic lesions in thoracic spine have disappeared on the last scan. She will stop chemotherapy for now to help her recover and; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING AFTER CHEMO. RULE OUT RECURRENCE OF DISEASE; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING FOR MM RELAPSE; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging prior to stem cell transplant/post chemo; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

The patient does not have any neurological deficits.; The patient has not failed a course of anti-inflammatory medication or steroids.; This is a request for a thoracic spine MRI.; There has not been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.; Unknown

The patient is not presenting new symptoms.; It is not known if the study is for follow up or staging.; The patient is not undergoing active treatment for cancer.; This is a request for a thoracic spine MRI.; The patient has had 3 or fewer thoracic spine MRIs.; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; The study is being ordered due to known tumor with or without metastasis.

The patient is not presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; This is a request for a thoracic spine MRI.; The patient has had 3 or fewer thoracic spine MRIs.; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; The study is being ordered due to known tumor with or without metastasis.

This is a request for a thoracic spine MRI.; "The patient has been seen by, or the ordering physician is, a neuro-specialist, orthopedist, or oncologist."; The study is being ordered due to follow-up to surgery or fracture within the last 6 months.

This is a request for a thoracic spine MRI.; There is no evidence of tumor or metastasis on a bone scan or x-ray.; The study is being ordered due to suspected tumor with or without metastasis.; Evaluation of patient with bone lesions.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for staging.; This is a request for a thoracic spine MRI.; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; The study is being ordered due to known tumor with or without metastasis.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

CANCER PT WITH INCREASING LUMBAR PAIN. LOOKING FOR METS; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Enter answer here - or Type In UnToni has multiple myeloma. She has not had a bone marrow. She had diffuse bony disease involving predominately the spine. She started out with a lambda light chain quantitative in the 5500 range that dates back to March ; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluate low back pain for possible metastatic cancer; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

faxing records; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

Follow up; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging prior to stem cell transplant/post chemo; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Known or suspected tumor with or without metastasis

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality
The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

The study requested is a Lumbar Spine MRI.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection; The patient has Neurological deficit(s)

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

see attached; The patient is undergoing active treatment for cancer.; This study is being ordered for known tumor, cancer, mass, or rule-out metastasis.; "The ordering physician is an oncologist, urologist, gynecologist, gastroenterologist or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; This study is not being ordered for initial staging.; This is a request for a Pelvis CT.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

unknown; This study is being ordered for known tumor, cancer, mass, or rule-out metastasis.; "The ordering physician is an oncologist, urologist, gynecologist, gastroenterologist or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; This study is being ordered for initial staging.; This is a request for a Pelvis CT.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Enter answer here - or Type In UnToni has multiple myeloma. She has not had a bone marrow. She had diffuse bony disease involving predominately the spine. She started out with a lambda light chain quantitative in the 5500 range that dates back to March ; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Heterozygous hemochromatosis with H63D mutation. TIBC=260.0 on 10/19/15.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately late 2014.; There has not been any treatment or conservative therapy.; unknown

Restaging Multiple Myeloma after Chemotherapy.; This is a request for a Pelvis MRI.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; An abnormality was found in something other than the bladder, uterus or ovary.; The study is being ordered for suspicion of tumor, mass, neoplasm, or metastatic disease.

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING NEEDED PRIOR TO STEM CELL TRANSPLANT.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

This is a request for a Pelvis MRI.; The request is for suspicion of pelvic inflammatory disease or abscess.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is suspicion of upper extremity neoplasm or tumor or metastasis.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

will fax records; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

; This study is being ordered for trauma or injury.; 08/11/2015; There has been treatment or conservative therapy.; PT IS HAVING CONSTANT ACHING, BURNING,TINGLING PAIN, DECREASED ROM, AND UNABLE TO MOVE ARMS ABOVE HEAD. PAIN IS AGGRAVATED WITH MOVING IN A SWEEPING MOTION, THE PAIN RADIATES TO THE ARMS AND FINGERS; PT HAS DONE PHYSICAL THERAPY, ALSO HOME THERAPY, PT HAS ALSO USED HEATING PAD AND ICE AND REST, ALSO OTC MEDS AND PRESCRIBED MEDS

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is an orthopedist.

The requested study is a Shoulder MRI.; Study being ordered for suspicious mass/tumor/metastasis.; The patient has had a recent bone scan.; The bone scan was not normal.; The patient has not had recent plain films of the shoulder.; < Enter answer here - or Type In Unknown If No Info Given. >

The requested study is a Shoulder MRI.; Study being ordered for suspicious mass/tumor/metastasis.; The patient has had recent plain films of the shoulder.; The plain films were not normal.

The requested study is a Shoulder MRI.; This study is being ordered for Known Tumor.; The ordering physician is an oncologist or orthopedist.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

Patient has had pain and swelling in her left knee for 1 mo. She completed a course of steroids and antibiotics and it is still inflamed and painful. the patient has ttp as well; This is a request for a Knee MRI.; The patient has not had recent plain films of the knee.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days; Yes, patient has completed and failed a course of conservative treatment.; There is conservative treatment other than physical Therapy, physician directed course of non-steroidal medications, Immobilization or Physical directed exercise.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

CT-Abdomen w/wo contrast with Adrenal Protocol for increase mass on previous CT.; This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; It is not known if this is a request for initial staging of a known tumor other than prostate.; There is no known prostate cancer with a PSA greater than 10.; No, this is not a request for follow up to a known tumor or abdominal cancer.; Yes, there is a palpable or observed abdominal mass.; Yes, there has been a recent abdominal CT scan.; Yes, this is a repeat of a CT of the abdomen within 6 weeks.

Evaluation of the liver.; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone, Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement, Known or suspected infection such as pancreatitis, etc.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis

f/u; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.
This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; Yes, this is a request for follow up to a known tumor or abdominal cancer.

This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.

This is a request for an Abdomen CT.; This study is being ordered for organ enlargement.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.
This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 09/17/2015; There has not been any treatment or conservative therapy.; Pt is having abdominal pain and discomfort. Dr will be using procedure to stage cancer.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for Congenital Anomaly.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for Inflammatory/ Infectious Disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; faxing rec; There has not been any treatment or conservative therapy.; RUQ abdominal pain, liver lesion, & ground glass attenuation & 1cm hilar lymph node

1) LYMPHADENOPATHY- Mr. Beckham is a middle aged gentleman who presented with syncopal episode. During work up, he was found to have HILAR AND MEDIASTINAL ADENOPATHY. His CT scan chest (6/11/13 @ WRMC) showed BILATERAL HILAR AND MEDIASTINAL LYMPHADENOPATHY; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 06/11/2013; There has not been any treatment or conservative therapy.; His repeat CT N/C/A/P (8/28/14) showed STABLE minimally prominent cervical nodes-felt to be reactive, STABLE prominent mediastinal and hilar nodes previously seen, slightly prominent retroperitoneal nodes-STABLE since 7/10/13.

A f/u PET scan on 9/18/15 showed several retroperitoneal lymph nodes measuring up to 1.2cm so he subsequently had a robotic bilateral non nerve sparing retroperitoneal lymph node dissection on 10/19/15.; Final pathology for his lymph node dissection sh; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Abnormal liver function and elevated tumor markers; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

CLL: THE WHITE COUNT APPEARS TO BE INCREASING OVER THE PAST FEW MONTHS. DR. WANTING CT SCANS FOR SURVEILLANCE.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; It is unknown if imaging studies have been performed on the member in the past 3 months.

Doctor is wanting new baseline scans since previous scans were done 6 weeks ago.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

enlarged lymph nodes; This is a request for an abdomen-pelvis CT combination.; The reason for the study is none of the listed reasons.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.

Enter answer here - or Type In Unknown If No Info Given; restaging ct scan for patient with known follicular lymphoma; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

eval of pt with liver cancer; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluate her response to treatment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Barrett's Esophagus.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Breast Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with cancer of the large intestine.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Cervical Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Coagulopathy.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/2014; There has been treatment or conservative therapy.; Evaluation of patient with Coagulopathy.; Coumadin

Evaluation of patient with Esophageal Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Kidney Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluation of patient with lung cancer; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Rectal Cancer with Liver Mets.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with stage IV Colon Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Evaluation of patient with Stage IV Kidney Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with stage IV Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

evaluation of patient with thyroid cancer; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

evaluation of pt with Malignant neoplasm of overlapping sites of corpus uteri; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

evaluation of pt with Malignant neoplasm of rectosigmoid junction, above perineal reflection; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing rec; This is a request for an abdomen-pelvis CT combination.; The reason for the study is known tumor.; This study is being ordered for follow-up.; The patient is not presenting new symptoms.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The patient is female.; The last Abdomen/Pelvis CT was performed within the past 10 months.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing rec; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing records.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing records.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing records.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

faxing records; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

follow up after chemo and radiation therapy for rectal cancer; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Follow up chemo therapy treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

follow up ct. bone metastasis; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Follow up scans to evaluate disease response to current treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up scans to evaluate response to current treatment and see if changes are needed.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up scans to evaluate response to current treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Follow up; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Having recurrent leukocytosis, anemia, and thrombocytosis.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately 09/2015; There has not been any treatment or conservative therapy.; Night sweats, weight loss, shortness of breath on exertion.

Initial staging of patient newly diagnosed with Endometrial Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

INITIAL STAGING; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

just completed treatment this is a 3 month follow up patient is complaining of pain fever dizziness cough vomiting; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Known Stage IV lung cancer, scans to evaluate disease response to current treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

METASTATIC ANDROGEN SENSITIVE PROSTATE CA: HE HAS BEEN ON ANDROGEN BLOCKADE. TAKE HAS TAKE 3 TREATMENTS OF TAXOTERE. PSA HAS GONE UP DESPITE THERAPY. DR. WANTING CT SCANS TO EVALUATE DISEASE.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; It is unknown if imaging studies have been performed on the member in the past 3 months.

Mr. Estes is a 65 year old male with pT3N2M0 Stage IIB pure seminoma of the left testicle status post inguinal orchiectomy. He received 2 cycle of cisplatin and etoposide both of which were complicated with two relatively prolonged hospitalizations. In bo; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months. MRI breast.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

None.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

On 10/2 pt had a biopsy confirmed evasive carcinoma; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Patient has completed 3 of 6 cycles of chemo. Restaging needed to evaluate response to chemo.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.
patient when to the ER and had ct chest; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.;
10/2/2015; There has not been any treatment or conservative therapy.; contipation, pain when breathing,

Patient with newly diagnosed colon cancer. Doctor is wanting diagnostic CTs for baseline purposes so treatment response can be measured in the future. PET was done to rule out distant mets.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Patient's cancer progressed on last CT Scan performed. He was started on a new chemo regimen and treatment needs to be evaluated.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

persistent leukocytosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 9/28/15; There has not been any treatment or conservative therapy.; low white blood count leukocytosis back pain

PNEUMONIA/ELEVATED CRP DESPITE ANTIBIOTIC THERAPY; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Previous CT showing splenomegaly, lymphadenopathy; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Portohepatic lymph node swelling in past. CT to check to see if abdominal lymphadenopathy is worsening or improving.; There has not been any treatment or conservative therapy.;

pt has completed a round of chemotherapy and needs ct for restaging of rectal cancer.; This is a request for an abdomen-pelvis CT combination.; The reason for the study is none of the listed reasons.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.

pt is currently having chemo they are doing treatment.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI. response to treatment. Patient had SRS for brain tumor and is continuing on the tamoxifen; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

restaging in a patient with known lung cancer with liver metastasis. last scans were 8-20-15; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging in a patient with known lung cancer, c/o cough and chest pain. patient has been taking chemotherapy.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging in a patient with unknown primary cancer. Basically nonsymptomatic. patient has been taking chemotherapy. This is to assess status of current disease.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Restaging Lymphoma; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Restaging of the chemotherapy.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Restaging prior to resection of liver mets. Late chemo given on 10/5/2015.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

restaging. Last Pet CT scans were done 9-18-2015. patient c/o weakness and fatigue, nausea, vomiting, dysphagia.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Rising in CA 19-9 increasing. Suspected of DZ progression; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Scans to evaluate disease response to current treatment regimen.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Scans to evaluate disease response to treatment and to see if known brain mets are needing radiation.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

staging; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

surveillance. Patient has a gene mutation that puts her at risk for further cancer.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; patient has history of 2 cancers, breast cancer in 4/2006 and ovarian cancer in 2009; There has been treatment or conservative therapy.; fatigue.; surgery and chemotherapy for both cancers.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; The reason for the study is known tumor.; This is not request for evaluation of prostate cancer.; This study is being ordered for follow-up.; The patient is presenting new symptoms.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The patient is male.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.

This is a request for an abdomen-pelvis CT combination.; The reason for the study is known tumor.; This study is being ordered for follow-up.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The patient is female.; The patient completed a course of chemotherapy or radiation therapy within the past 90 days.

This is a request for an abdomen-pelvis CT combination.; The requested studies are being ordered for known or suspected blood clot, thrombosis, or stenosis and are being ordered by a surgeon or by the attending physician on behalf of a surgeon.; Vascular disease

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other;

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Abd pain, acute abd x-ray indicates possible obstruction, and diarrhea.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Evaluation of patient with abdominal pain.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; LEUKOCYTOSIS: THIS APPEARS TO BE CHRONIC. HE DOES HAVE SYMPTOMS OF DEEP BONE PAIN WHICH IS CONCERNING. HE ALSO HAS PERSISTENT RT UPPER QUADRANT PAIN. NEED CT SCAN TO EVALUATE THE PERSISTENT RT UPPER QUADRANT PAIN WHICH RADIATES BETWEEN THE SCAPULA.

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is not a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor; faxing rec

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is a request for initial staging of a known tumor other than prostate.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; It is not known if there is an abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Diffused large b-cell lymphoma, complete remission. last chemo 7/24/13. Last abd/pel Ct 7/31/13. this is for follow up.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has been a recent previous abdominal and or pelvis CT scan.; This would not be a repeat of a CT of the abdomen and or pelvis within 6 weeks.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has not been a recent abdominal and or pelvis CT scan.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is a known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is an abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Doctor is trying to determine if previous course of treatment had any effect

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Follow up scan to evaluate disease, last chemo treatment 08/2015. Checking to see if more treatment is needed.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Lung cancer restaging after 6 cycles of chemotherapy.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Patient establishing care for known carcinoid tumor and scans are needed to establish new baseline.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Patient with known Stage III lung cancer. Scan for follow up to monitor disease.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

Unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

UNKNOWN; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Unknown; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms do not indicate that the cancer may be present or reoccurring.

will fax rec.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; faxing rec; There has not been any treatment or conservative therapy.; weight loss

will fax rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

will fax records; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Evaluation of patient with bone cancer and hepatic mass and SPN.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Heterozygous hemochromatosis with H63D mutation. TIBC=260.0 on 10/19/15.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately late 2014.; There has not been any treatment or conservative therapy.; unknown

This request is for an Abdomen MRI.; This study is being ordered for follow-up trauma.; The ordering physician is not a gastroenterologist or surgeon.; There are no laboratory or physical evidence of an intra-abdominal bleed.; It is unknown if there are physical or abnormal blood work consistent with peritonitis or abdominal abscess.; < Enter answer here - or Type In Unknown If No Info Given. >

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is not presenting new symptoms.; The patient has had 3 or fewer follow-up abdomen MRIs.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; under went ablation on June 17 2015 mri needed to evaluate poor response

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon.";

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; Evaluation of patient with Angiosarcoma.

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; follow up liver cancer

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; Last chemotherapy was 8/2015, now experiencing abdominal pain

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; Severe diarrhea and abdominal pain and swelling;suspected metastatic disease

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for follow-up.; The patient is undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; Evaluation of patient with Liver Cancer.

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for follow-up.; The patient is undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; Pt had last chemo tx and will have the MRI to evaluate for tumor restion of the liver or see if additional chemo is needed.

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for follow-up.; The patient is undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; unknown

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for staging.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon.";

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for staging.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; unknown

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study.";

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; < Enter answer here - or Type In Unknown If No Info Given. >

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; 3.5 CM IRREGUGULAR MASS FOUND ON CT

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; Abnormal Ultrasound

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; Evaluation of splenomegaly, follow up after abnormal findings on prior imaging.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has not had an abdominal ultrasound, CT, or MR study."; LFT results as of 11/9/15; Total Bilirubin 9.1; Alk Phos 1442; AST 393; ALT 601; LD 308

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are no documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study.";

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are no documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has not had an abdominal ultrasound, CT, or MR study."; Follow up scan to evaluate/monitor known hepatic adenoma and liver lesion.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are no documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has not had an abdominal ultrasound, CT, or MR study."; Known stage IV colon cancer with known liver mets. Recent PET shows possible slight progression of mets, MRI to get a better picture of liver.

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.;

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Reoccurrence of cancer; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This is a request for a heart or cardiac MRI

Yes, this is a request for CT Angiography of the abdominal arteries.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; ; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are NOT benign lesions in the breast associated with an increased cancer risk.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Ovarian Cancer with new breast pain.; This is a request for Breast MRI.; This study is being ordered for something other than known breast cancer, known breast lesions, screening for known family history, screening following genetic testing or a suspected implant rupture.

Newly diagnosed breast cancer 11/6/15. Missed by first mamogram.; This is a request for Breast MRI.; This study is being ordered for something other than known breast cancer, known breast lesions, screening for known family history, screening following genetic testing or a suspected implant rupture.

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; Yes, this is a confirmed breast cancer.; Yes, the results of this MRI (size and shape of tumor) affect the patient's further management.

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; Yes, this is an individual who has known breast cancer in the contralateral (other) breast.

This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are benign lesions in the breast associated with an increased cancer risk.

This patient had MRI guided biopsies for areas not targetable by u/s. Due to the previous MRI that dictated a complicated exam due to the extensive fibrocystic changes throughout the breast, they recommend a 1yr follow up MRI.; This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There are NOT benign lesions in the breast associated with an increased cancer risk.; There is NOT a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

A patient with therapy-related MDS. He was diagnosed with multiple myeloma in May 2014, complex karyotype, MS molecular subtype. He was treated per Total Therapy 5 protocol, however, no response after induction chemotherapy. Subsequently, he received; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

PT IS COMING FOR RESTAGING AFTER CHEMO TO BE FOLLOWED BY HIS FIRST TRANSPLANT; This is a request for an MRI Bone Marrow.

restaging multiple myeloma after chemo therapy; This is a request for an MRI Bone Marrow.

Restaging Multiple Myeloma after Chemotherapy.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING NEEDED PRIOR TO STEM CELL TRANSPLANT.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

RESTAGING; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

for initial staging of cancer and to evaluate the heart before chemo; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Pathology results reveal diffuse large B cell lymphoma and will require treatment to include chemotherapy. Pet is required to see if she has local versus extensive disease as well as check Hepatitis panels. MUGA scan is required ASAP in preparation for ch; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Patient completed radiation therapy on 9/25/2015. PET is needed for restaging prior to start of chemo. MUGA is needed for baseline evaluation prior to start of chemo. Neither procedure has been performed yet.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI. See Attachment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

staging; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is a change in cardiac signs or symptoms (shortness of breath, etc.)."; The last MUGA scan was performed more than 3 months ago.; Patient is currently on chemotherapy with new symptoms of shortness of breath.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is a change in cardiac signs or symptoms (shortness of breath, etc.)."; The last MUGA scan was performed more than 3 months ago.; patient is symptomatic

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient has not had a previous MUGA scan.; Evaluation of heart to prepare for chemotherapy

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; It is not known if the patient will be undergoing more chemotherapy.; The last MUGA scan was performed more than 3 months ago.; STAGE 11A ER/PR POSITIVE, HER2 POSITIVE BREAST CA. COMPLETED HERCEPTIN ON 11/24/15. DR. WANTING MUGA SCAN AFTER COMPLETION OF HERCEPTIN.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The last MUGA scan was performed more than 3 months ago.;

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The last MUGA scan was performed more than 3 months ago.; Muga scan ordered to check ejection fraction of heart during chemotherapy

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The last MUGA scan was performed more than 3 months ago.; Patient has completed Radiation and is continuing with Herceptin, a known cardiotoxic drug

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The last MUGA scan was performed more than 3 months ago.; Patient is getting R-EPOCH and needs to make sure that post C5 prior to C6 patient can tolerate another round. this is according to protocol post stem cell collection for transplant

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The last MUGA scan was performed more than 3 months ago.;
RESTAGING MULTIPLE MYELOMA AFTER CHEMOTHERAPY

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The patient has not had a previous MUGA scan.;

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The patient has not had a previous MUGA scan.; Newly diagnosed breast cancer, with the intent of starting chemotherapy

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The patient has not had a previous MUGA scan.; Restaging Lymphoma

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; "There is not a change in cardiac signs or symptoms (shortness of breath, etc.)."; The patient will be undergoing more chemotherapy.; The patient has not had a previous MUGA scan.; unknown

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; The last MUGA scan was performed within the last 3 months.;

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; The last MUGA scan was performed within the last 3 months.; Enter answer here - or Type In Unknown If No Info GiLAST LAST MUGA WAS ON 7/6/.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has been initiated or completed.; The last MUGA scan was performed within the last 3 months.; Patient is taking Herceptin IV Q 3 Weeks along with Arimidex. Surveillance

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has not been initiated or completed.; Chemotherapy is planned.;

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has not been initiated or completed.; Chemotherapy is planned.; Baseline needed prior to start of chemo.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has not been initiated or completed.; Chemotherapy is planned.; Malignant lymphoma diffuse large b cell type in right ureter. Chemotherapy treatment plan CHOP + R beginning 12/29/2015.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has not been initiated or completed.; Chemotherapy is planned.; Patient is HER2+. MUGA is needed before we start her on Kadcylla for her Breast cancer.

This is a request for a MUGA scan.; This study is being ordered for Chemotherapy.; Chemotherapy has not been initiated or completed.; Chemotherapy is planned.; unknown

This is a request for a MUGA scan.; This study is being ordered for Congestive Heart Failure.; The patient has not recently been diagnosed with and/or treated for congestive heart failure.; It is not known if the patient is presenting new cardiac signs or symptoms.; Has Metastatic breast cancer, currently on therapy. Would like to restart pertuzumab and trastuzumab on 12/1/15. Has hypertension. Wants MUGA before treatment

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

evaluation of pt with dementia.; This is a request for a Metabolic Brain PET scan; This study is being ordered for dementia.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

eval of pt with liver cancer; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

evaluation of patient with lung cancer; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

newly diagnosed colon cancer, scans to complete initial staging workup.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Stage IV lung cancer with brain mets. Completed radiation to the brain late 08/2015. Currently on chemotherapy treatment. Tests are to evaluate disease response to treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a more than 1 of the following; diagnostic test, imaging sstudy, or biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Colorectal Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Breast Cancer.; This is for evaluation of axillary lymph nodes.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Colo-rectal Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Head/Neck Cancer.; The patient has Thyroid cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Melanoma.; This is NOT for evaluation of regional lymph nodes.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient is experiencing new signs, symptoms indicating a reoccurrence of cancer or a rising CEA.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs, symptoms or a rising CEA.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; The patient does NOT have Thyroid or Brain cancer.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; It is unknown if the patient has been diagnosed with small cell or non small cell lung cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new sings or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with abd pain and abd mass.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Evaluation of patient with abd pain and abd mass.; There has not been any treatment or conservative therapy.; Evaluation of patient with abd pain and abd mass.

Evaluation of patient with Bladder Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with bone cancer and hepatic mass and SPN.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Breast Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Cervical Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Cervical Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with CLL/SLL.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Esophageal Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Head and Neck Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Lung Cancer with Bone Mets.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Lymphoma.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Lymphoma.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Melanoma.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Rectal Cancer with Liver Mets.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Evaluation of patient with stage IV Lung Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluation of pt with Malignant neoplasm of rectosigmoid junction, above perineal reflection; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing rec.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing rec; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing rec; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing records.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing records; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing records; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

faxing records; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

faxing recs.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

has station 7 lymph node , test Is for staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Initial staging of patient newly diagnosed with Breast Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Initial staging of patient newly diagnosed with Endometrial Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Initial staging of patient newly diagnosed with Esophageal Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Initial staging of patient newly diagnosed with Gastric Cancer.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

initial staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Pathology results reveal diffuse large B cell lymphoma and will require treatment to include chemotherapy. Pet is required to see if she has local versus extensive disease as well as check Hepatitis panels. MUGA scan is required ASAP in preparation for ch; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Patient completed radiation therapy on 9/25/2015. PET is needed for restaging prior to start of chemo. MUGA is needed for baseline evaluation prior to start of chemo. Neither procedure has been performed yet.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Pt. has non small cell lung cancer stage 4, secondary bone and brain cancer and having cycle 6 of her CHEMO today.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

See attachment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Staging for CA; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a Tumor Imaging PET Scan; A nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; The solitary pulmonary nodule was identified on an imaging study in the last 30 days.; This study is being requested for Lung Cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; A nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; The solitary pulmonary nodule was identified on an imaging study in the last 30 days.; This study is being requested for Lung Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; A nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; The solitary pulmonary nodule was NOT identified on an imaging study in the last 30 days.; This study is being requested for Lung Cancer.

This is a request for a Tumor Imaging PET Scan; It is unknown why the study is being ordered.; This study is being requested for Lymphoma or Myeloma.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a more than 1 of the following; diagnostic test, imaging sstudy, or biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Colo-rectal Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a more than 1 of the following; diagnostic test, imaging sstudy, or biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lymphoma or Myeloma.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a more than 1 of the following; diagnostic test, imaging sstudy, or biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on an imaging study.; This study is being ordered to establish a cancer diagnosis.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on an imaging study.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on an imaging study.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Ovarian or Esophageal Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for Cervical Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Breast Cancer.; This is for evaluation of axillary lymph nodes.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Breast Cancer.; This is NOT for an evaluation of axillary lymph nodes.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Colo-rectal Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Head/Neck Cancer.; The patient does NOT have Thyroid or Brain cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Head/Neck Cancer.; The patient does NOT have Thyroid or Brain cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Lung Cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Lung Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Soft Tissue Sarcoma, Pancreatic or Testicular Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for Brain Cancer/Tumor or Mass.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for Cervical Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; It is unknown if the patient completed a course of treatment initiated in the last 8 weeks or are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; It is unknown how many PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient is experiencing new signs, symptoms indicating a reoccurrence of cancer or a rising CEA.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient is experiencing new signs, symptoms indicating a reoccurrence of cancer or a rising CEA.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient is experiencing new signs, symptoms indicating a reoccurrence of cancer or a rising CEA.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient is experiencing new signs, symptoms indicating a reoccurrence of cancer or a rising CEA.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs, symptoms or a rising CEA.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; The patient does NOT have Thyroid or Brain cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; The patient does NOT have Thyroid or Brain cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; The patient does NOT have Thyroid or Brain cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; The patient does NOT have Thyroid or Brain cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; The patient does NOT have Thyroid or Brain cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; It is unknown if the patient completed a course of treatment initiated in the last 8 weeks or are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new sings or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with small cell lung cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; More than 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Ovarian or Esophageal Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Soft Tissue Sarcoma, Pancreatic or Testicular Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Breast Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lung Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being requested for Head/Neck Cancer.; It is unknown if the patient has Thyroid or Brain cancer.
This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

UNKNOWN; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

will fax recs.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; The reason for ordering this study is unknown.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Left Ventricular Function.; The patient has a history of hypertensive heart disease.; There is a change in the patient's cardiac symptoms.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

Radiology Services Denied Not Medically Necessary

Pt with a hx of thrombocytosis with a JAK2 mutation. Pt is on Hydrea and her immune system is low.; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is immune-compromised.

Radiology Services Denied Not Medically Necessary

Evaluation of patient with Head and Neck Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Radiology Services Denied Not Medically Necessary

Evaluation of patient with stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

Following up previous scans to evaluate lymphadenopathy in bilateral hilar and mediastinal regions.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/2014; There has not been any treatment or conservative therapy.; Patient did not report any symptoms recently.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; It is unknown if there is a suspicion of an infection or abscess.; It is unknown if this examination is being requested to evaluate lymphadenopathy or mass.; It is unknown if there is a suspicion of a bone infection (osteomyelitis).; It is unknown if there is a suspicion of an orbit or face neoplasm, tumor, or metastasis.; This is a request for a Face MRI.; It is unknown if there is a history of orbit or face trauma or injury.

Radiology Services Denied Not Medically Necessary

patient finished chemotherapy, lesions; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Radiology Services Denied Not Medically Necessary

Evaluation of patient with Stage IV Breast Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; A nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; The solitary pulmonary nodule was NOT identified on an imaging study in the last 30 days.; This study is being requested for Lung Cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Melanoma.; This is for evaluation of regional lymph nodes.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs, symptoms or a rising CEA.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.; The patient does NOT have Thyroid or Brain cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with small cell lung cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; This would be the first PET Scan performed on this patient for this cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new sings or symptoms.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient completed a course of treatment initiated within the last 8 weeks.; 3 PET Scans have already been performed on this patient for this cancer.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new sings or symptoms.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Soft Tissue Sarcoma, Pancreatic or Testicular Cancer.

Radiology Services Denied Not Medically Necessary

will fax rec; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Radiology Services Denied Not Medically Necessary

; This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.

This is a request for a brain/head CT.; The study is requested for known or suspected bleed such as subdural hematoma or subarachnoid bleed.

Enter   March 25, 2014         John K. Heifner, MD 9601 Baptist Health Drive Suite 400 Little Rock AR 72205     Dear John:   I am seeing Tom and followup for lambda light chain myeloma and primary amyloidosis of the heart and kidne; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The study is requested for congestive heart failure.; It is not known if the member has known or suspected coronary artery disease.

Enter   March 25, 2014         John K. Heifner, MD 9601 Baptist Health Drive Suite 400 Little Rock AR 72205     Dear John:   I am seeing Tom and followup for lambda light chain myeloma and primary amyloidosis of the heart and kidne; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

shortness od breathe, and cough, long time smoker, bronchitis after antibiotics, white cell count of 18,000, COPD diagnosis,; This is a request for neck soft tissue CT.; The patient has a neck lump or mass.; It is not known if there is a palpable neck mass or lump.

This is a request for neck soft tissue CT.; It is unknown if there has been recent trauma or other injury to the neck.; It is unknown if there is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is a suspicion of an infection or abscess.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient is experiencing dizziness.

abnormal chest x-ray and granulomatous lymphadenitis; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

FATIGUE; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

There is radiologic evidence of non-resolving pneumonia for 6 weeks after antibiotic treatment was prescribed.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

Unknown; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

; This study is being ordered for Inflammatory/ Infectious Disease.; 10/21/2015; There has been treatment or conservative therapy.; pneumonia; meds

Patient fell in 2014 and hit her head requiring stitches. Diagnosed with a TIA in 2014. She has worsening headaches, nausea and double or blurry vision. CT done 8-17-14 and 8-18-14 were abnormal. Patient did not follow-in a year as recommended. Patient; This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.

patient has lung cancer. mental status changes, vision changes. weakness in extremities; This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient has vision changes.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or aneurysm.; This study is being ordered for neurological deficits.

PT HAS HAD HX OF A FALL, HAVING HEADACHES SINCE THEN. NO RELIEF WITH MEDS; This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.

PT HAS RISK FACTOR OF DIABETES AND HTN ALSO HAS HX OF CVA. HE IS A SMOKER; This study is being ordered for a neurological disorder.; 12/01/2015; There has not been any treatment or conservative therapy.; NUMBNESS LEFT SIDE/SYNCOPE/BLURRED VISION/SLURRED SPEECH

she is having TIA with vertigo/speech difficulty/high risk for a stroke; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected. Suspected stroke; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

This is a request for a brain/head CT.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

This is a request for a brain/head CT.; The study is requested for history of stroke, (CVA) known or follow-up.

This is a request for a brain/head CT.; The study is requested for known or suspected bleed such as subdural hematoma or subarachnoid bleed.

This is a request for a brain/head CT.; There is a suspected or known brain tumor.; The study is requested for known or suspected brain tumor, mass or cancer.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

UNKNOWN; This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

Unknown; This study is being ordered for trauma or injury.; 11/3/2015; There has been treatment or conservative therapy.; Headache, neck pain and muscle aches.; Tramadol and fall prevention education. Using a cane.

"This request is for face, jaw, mandible CT.239.8"; "There is a history of serious facial bone or skull, trauma or injury.fct"

"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is suspicion of neoplasm, tumor or metastasis.fct"

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/1/2014; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; Sinus RX's

; This study is being ordered for Inflammatory/ Infectious Disease.; 10/21/2015; There has been treatment or conservative therapy.; pneumonia; meds

Evaluation for presence of fungal infection, etc., in a patient with recurrent episodes of acute sinusitis despite treatment.; "This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is not a suspicion of neoplasm, tumor or metastasis.fct"; "There is not a suspicion of bone infection, [osteomyelitis].fct"; This is not a preoperative or recent postoperative evaluation.

NCAT, PERRLA, EOMI, B/L TM normal appearance with visible landmarks, conjunctiva and sclera with no erythema, no eye discharge, clear to yellowish green nasal discharge, pharynx with erythema and PND, MM wet with no lesions; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been less than 14 days since onset

This study is being ordered for follow-up to trauma.; This is a request for a Sinus CT. This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is immune-compromised.

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

during eval and physical exam, doctor noticed enlarged and non tender lymph nodes; This study is being ordered for Inflammatory/ Infectious Disease.; referred by pcp after being treated for 3 weeks; There has been treatment or conservative therapy.; cough, pulmonary adema, pneumonia, weight loss, dyspnea, wheezing; azithromycin, cefdinir
This is a request for neck soft tissue CT.; There has been recent trauma or other injury to the neck.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is no suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is not a suspicion of an infection or abscess.; This is not being ordered by an ENT specialist.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 9/30/2015; There has not been any treatment or conservative therapy.; DIZZNESS, UNSTEADY GAIT

This patient had an MRI today(12/3/15). The radiologist called and stated that the patient may have a saccular aneurysm, but needed her to have a CT cerebral angiogram and a non-contrasted CT of the head to determine if patient in fact had, a saccular an; This study is being ordered for Vascular Disease.; 11/10/2015; There has not been any treatment or conservative therapy.; This patient presented to the clinic complaining of dizziness, headaches, and blurred vision.
Yes, this is a request for CT Angiography of the brain.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 9/30/2015; There has not been any treatment or conservative therapy.; DIZZNESS, UNSTEADY GAIT
Yes, this is a request for CT Angiography of the Neck.

"This is a request for orbit,face, or neck soft tissue MRI.239.8"; The study is ordered for suspicion of infection or abscess
There is not a suspicion of an infection or abscess.; This examination is being requested to evaluate lymphadenopathy or mass.; This is a request for a Face MRI.; There is not a history of orbit or face trauma or injury.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

mother died of CNS aneurysm at age 53 and father died of stroke with possible aneurysm; This study is being ordered for a neurological disorder.; 09/26/2015; There has been treatment or conservative therapy.; vertigo, nystagmus, nausea & vomiting; patient was seen at ER on 9/26/15, treated with ondansetron and scopolamine patch

Patient with Headache, Tinnitus, visual changes, and abnormal vascular loop contacting 7th and 8th nerves on prior MRI. Patient has tried prior therapy for all listed above.; This study is being ordered for a neurological disorder.; new neurologic symptoms:The symptoms began 1 month ago and generally lasts varies.  She has developed a feeling of imbalance or "listing" more to the right.1 month.  She is been having dysesthetic symptoms with tingling, burning, and numb feelings in ; There has been treatment or conservative therapy.; Headache, Imbalance problems, Visual changes; magnesium 400 mg once a day to improve headache frequency and improve muscular pain  Lyrica 75mg capsules BID  Maxalt 10mg take 1 tablet at onset of migraine  Tramadol 50mg take 1-2tablets BID PRN for pain

There is an immediate family history of aneurysm.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has been a stroke or TIA within the past 2 weeks.; This is a request for a Brain MRA.
The patient has had a recent MRI or CT for these symptoms.; This is a request for a Neck MR Angiography.

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/20/2015; There has been treatment or conservative therapy.; aphasia, carotid occlusion of 100%; speech therapy

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were normal; The patient is experiencing fatigue or malaise.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/oncologist.

bilateral upper extremity pain; This study is being ordered for a neurological disorder.; 10/2015; There has not been any treatment or conservative therapy.; loss of feeling from elbow to hand on right dife

Enter answer here - or Type In Unknown If No Info
decreased sensation of forward 1/3 of tongue and decreased sensation of taste; present over past several months; stable not getting worse; nfo Given.; This study is being ordered for a neurological disorder.; ; There has been treatment or conservative therapy.; ; Describe treatment / conservative therapy here - or Type In Unknown If No Info Give; Blood pressure meds were changed to see if patient was having side effects from that. Symptoms did not get better.

Facial numbness for a couple of months, works around mold, using antibiotics and nothing helps; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; The patient does not have a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.; The doctor does not note on exam that the patient has delirium or acute altered mental status.; The patient does not have a Brain CT showing abscess, brain infection, meningitis or encephalitis.

Headache; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/28/2015; There has been treatment or conservative therapy.; Pt c/o trigger point a base of scalp, sore eyes and headache with neck stiffness.; RX injection at base of skull.

mother died of CNS aneurysm at age 53 and father died of stroke with possible aneurysm; This study is being ordered for a neurological disorder.; 09/26/2015; There has been treatment or conservative therapy.; vertigo, nystagmus, nausea & vomiting; patient was seen at ER on 9/26/15, treated with ondansetron and scopolamine patch

PATIENT COMPLAINS OF HEADACHES AND DIZZINESS WHEN CLOSING EYES OR TURNING HEAD WORSE WHEN HEAD IS UP OR DOWN; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Patient fell down a set of stairs and hit her head; traumatic brain injury with loss of consciousness of 30 minutes or less; intermittent memory loss; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested due to trauma or injury.; There are not new, intermittent symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; The trauma or injury to the head was between 24 hours and 1 week ago.

Patient has dementia with behavioral disturbance, patient is only 64yrs old; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were normal; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

Patient has headache for 1 month; entire head. Patient feels like something is crawling across his head, dizziness, nausea, increase blood pressure, hypertension.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Patient is having hallucination, seeing people with no face. He woke up in his car and was confused as to why.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has a sudden change in mental status.; It is unknown why this study is being ordered.

patient is showing signs of fatigue; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; This headache is not described as sudden, severe or chronic recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Patient passed out, couldn't talk, ringing in ear and chest tight.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

Patient with Headache, Tinnitus, visual changes, and abnormal vascular loop contacting 7th and 8th nerves on prior MRI. Patient has tried prior therapy for all listed above.; This study is being ordered for a neurological disorder.; new neurologic symptoms:The symptoms began 1 month ago and generally lasts varies.  She has developed a feeling of imbalance or "listing" more to the right.1 month.  She is been having dysesthetic symptoms with tingling, burning, and numb feelings in ; There has been treatment or conservative therapy.; Headache, Imbalance problems, Visual changes; magnesium 400 mg once a day to improve headache frequency and improve muscular pain  Lyrica 75mg capsules BID  Maxalt 10mg take 1 tablet at onset of migraine  Tramadol 50mg take 1-2tablets BID PRN for pain

possible demyelination; This study is being ordered for a neurological disorder.; 11/18/156; There has been treatment or conservative therapy.; abnormal neurological exam right upper extremity, left lower extremity. Motor and sensory deficits.; blood evaluation

ruling out or evaluating for MS, family history of MS, family history of brain cancer; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has not undergone treatment for multiple sclerosis.; There are not intermittent or new neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.

See Tracking 112244665; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient does not have dizziness, one sided arm or leg weakness, the inability to speak, or vision changes.; It is unknown if the patient has HIV or cancer.; The patient has a sudden and severe headache.; The patient had a recent onset (within the last 3 months) of neurologic symptoms.

seizures, headaches; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Severe migraines x 1 week; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a sudden and severe headache.; The patient has NOT had a recent onset (within the last 3 months) of neurologic symptoms.

Syncope episodes passes out; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

This is a request for an Internal Auditory Canal MRI.; There is not a suspected Acoustic Neuroma or tumor of the inner or middle ear.; There is not a suspected cholesteatoma of the ear.; The patient has not had a recent brain CT or MRI within the last 90 days.; There are no neurologic symptoms or deficits such as one-sided weakness, speech impairments, vision defects or sudden onset of severe dizziness.; This is not a pre-operative evaluation for a known tumor of the middle or inner ear.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is described as a “thunderclap” or the worst headache of the patient’s life.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; This headache is not described as sudden, severe or chronic recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing dizziness.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing fatigue or malaise.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient is experiencing dizziness.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested due to trauma or injury.; There are new, intermittent symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has not undergone treatment for multiple sclerosis.; There are intermittent or new neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has undergone treatment for multiple sclerosis.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has been a previous Brain MRI completed.; The brain MRI was abnormal.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for a tumor.

UNKNOWN; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

Unknown; This study is being ordered for a neurological disorder.; Unknown; There has been treatment or conservative therapy.; Chest wall pain, left arm weakness, headache, epileptic seizures, dysmetria, chest wall tenderness and swelling; Medication

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/20/2015; There has been treatment or conservative therapy.; aphasia, carotid occlusion of 100%; speech therapy

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2 weeks ago; There has been treatment or conservative therapy.; Headaches and chronic sinusitis; Pt was given medication

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Medical notes said "years"; There has been treatment or conservative therapy.; (Lumbar Spine MRI) lower back pain, radiating down left thy and back café. (chest CT) Nodular in upper left chest; Medications/ Back Brace/ PT/ ; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

; This study is being ordered for Inflammatory/ Infectious Disease.; 10/21/2015; There has been treatment or conservative therapy.; pneumonia; meds

; This study is being ordered for Inflammatory/ Infectious Disease.; Biopsy performed on 10/08/15; There has been treatment or conservative therapy.; non-healing oral ulcerative lesion on upper inner lip with a positive biopsy Crohns disease vs. sarcoidosis; nystatin swish and swallow, acyclovir, fluconasone, Valtrex, treatment by ENT, dentist, oral and maxillofacial surgeon and oral and maxillofacial pathologist, who performed the biopsy

1.5 cm nodule in the medial right lung base. A short-term follow-up chest CT is recommended for further evaluation.; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

10/10/14 patient had a screening CT chest due to smoking history - quit smoking 8/12/13 - has a 17 pack year history. CT showed :There are scattered pleural-based nodules identified within the lungs as described above measuring up to 3.6 mm in size. Give; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

A Chest/Thorax CT is being ordered.; The patient had a Chest x-ray in the past 2 weeks.; The study is being ordered for none of the above.; This study is being ordered for hemoptysis.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.

A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient does NOT have signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient quit smoking in the past 15 years.; The patient does NOT have signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

a spot enlarged chest x-ray came back abnormal; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Coronary artery disease involving native coronary artery of native heart without angina pectoris,Hyperlipidemia, unspecified hyperlipidemia,Type 2 diabetes, controlled, with peripheral circulatory disorder,Tobacco use,Essential hypertension,Peripheral vas; This study is being ordered for Vascular Disease.; 2011; There has been treatment or conservative therapy.; shortness of breath; chest pain; dizziness; occasional back pain; weight loss; EKGs, Echocardiography, heart cath, tobacco counseling and medication management.

CT chest was done on 3-16-2015 that detected a 6 mm nodule in the right lung area. A follow up CT was recommended.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

during eval and physical exam, doctor noticed enlarged and non tender lymph nodes; This study is being ordered for Inflammatory/ Infectious Disease.; referred by pcp after being treated for 3 weeks; There has been treatment or conservative therapy.; cough, pulmonary edema, pneumonia, weight loss, dyspnea, wheezing; azithromycin, cefdinir F/U for noted aortic aneurysm six months; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

f/u to previous imaging; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Follow up CT for lung nodule.; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

had an abnormal chest ct, found lumps throughout the neck, small asymmetric area of nodule plus thickening in the left lung apact; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

history of dvt...now with bright red blood production; The patient has NOT had a chest x-ray recently.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for hemoptysis.

history of tobacco use and exposure to asbestos and chronic shortness of breath; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

IP bypassing Medical Necessity Questions; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

It is not known if there is radiologic evidence of non-resolving pneumonia.; The patient is presenting new signs or symptoms.; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; "There is radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

none; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; It is unknown if the patient has a 30 pack per year history of smoking.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

none; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/17/15; There has not been any treatment or conservative therapy.; pain

patient had a CT chest 3/11/15 - has a stable 4mm non calcified nodule left upper lobe - radiologist recommended 6 month follow up CT.; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

patient had a CT coronary calcium score on 4/9/15 which showed a right lung base 3.7 mm nodule. Recommend followup in 6 months.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

patient had a CT lung screening done 5/2015 which showed : Small nodules bilaterally, the largest which measures up to 6 mm in the left upper lobe. These are nonspecific. Follow-up CT in 6 months is recommended to evaluate for any interval change. Current; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Patient is having a cough with discharge along with an abnormal chest xray showing large calcification and hilar density.; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

PT WITH FEVER OF UNKNOWN ORIGIN; ELEVATED CADMIUM BLOOD LEVEL. ABD PAIN, ANOREXIA HX OF LUNG NODULES. RULE OUT CANCER; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

rule out lung disease; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

seen in office 10/21/15. He reports a CT chest in July 2014 (with another provider) that showed pulmonary nodules, he is due for follow up CT; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

test completed on 09/19/2015; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

There is no radiologic evidence of non-resolving pneumonia.; There is no radiologic evidence of asbestosis.; Patient has infiltrates and consolidation on plain xray. Unresolved cough; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; "There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is no radiologic evidence of a lung abscess or empyema.; There is no radiologic evidence of pneumoconiosis e.g. black lung disease or silicosis.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

There is no radiologic evidence of non-resolving pneumonia.; There is no radiologic evidence of asbestosis.; pleural effusion and ground glass infiltrates.; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; "There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is no radiologic evidence of a lung abscess or empyema.; There is no radiologic evidence of pneumoconiosis e.g. black lung disease or silicosis.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

There is no radiologic evidence of non-resolving pneumonia.; There is no radiologic evidence of asbestosis.; Unexplained chest & rib pain for 3 years; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; "There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is no radiologic evidence of a lung abscess or empyema.; There is no radiologic evidence of pneumoconiosis e.g. black lung disease or silicosis.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

There is radiologic evidence of non-resolving pneumonia after at least 4 weeks of treatment.; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

This is a f/u from abnormal CT in May; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

unintentional weight loss; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Pt has unintentionally lost over 100lbs since Sept 2014.; There has been treatment or conservative therapy.; weight loss; diagnostic testing - all looks normal

will fax clinical upon request; "Caller is NOT SURE if there is evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Xray of chest shows, mass or solitary nodule of lung; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 3 weeks ago had Xray in ER; There has been treatment or conservative therapy.; chest pain, sinus and chest congestion; antibiotics

Yearly FU for stability; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for none of the above.

; This study is not requested to evaluate suspected pulmonary embolus.; This study will not be performed in conjunction with a Chest CT.; This study is being ordered for another reason besides Known or Suspected Congenital Abnormality, Known or suspected Vascular Disease.; Yes, this is a request for a Chest CT Angiography.
chest ct of 6/4/15 showed increasing aneurysmal dilation of the descending thoracic aorta - requires follow-up; This study is not requested to evaluate suspected pulmonary embolus.; This study will be performed in conjunction with a Chest CT.; Yes, this is a request for a Chest CT Angiography.

ECHO to evaluate bicuspid vs trileaflet aortic valve; - CTA for aortic root evaluation; 38 yo CF with h/o congenital aortic stenosis' and a dilated aortic root comes for follow up. She was last seen by Dr Hayes in June 2013 and had a MRA of the chest that ; This study is not requested to evaluate suspected pulmonary embolus.; This study will be performed in conjunction with a Chest CT.; Yes, this is a request for a Chest CT Angiography.

Ms Alcorn-Smith is a pleasant 40 y/o lady referred for evaluation of a rapid heart rate/palpitations. She is here today for follow up after a TTE/Bubble- Mildly dilated left atrium and moderately enlarged right atrium and ventricle, normal global left ven; This study is being ordered for Vascular Disease.; Ms Alcorn-Smith is a pleasant 40 y/o lady referred for evaluation of a rapid heart rate/palpitations. She is here today for follow up after a TTE/Bubble- Mildly dilated left atrium and moderately enlarged right atrium and ventricle, normal global left ven; It is not known if there has been any treatment or conservative therapy.; Ms Alcorn-Smith is a pleasant 40 y/o lady referred for evaluation of a rapid heart rate/palpitations. She is here today for follow up after a TTE/Bubble- Mildly dilated left atrium and moderately enlarged right atrium and ventricle, normal global left ven

This study is requested to evaluate suspected pulmonary embolus.; Yes, this is a request for a Chest CT Angiography.

; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; There is no reason why the patient cannot have a Cervical Spine MRI. cross-sectional imaging warranted by radiologist on x-ray report; It is not known if the patient has any neurological deficits.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to trauma or acute injury within 72 hours.; There is a reason why the patient cannot have a Cervical Spine MRI.

Patient was denied cervical spine MRI. Neck pain with parasthesia in bil arms.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; There is no reason why the patient cannot have a Cervical Spine MRI.

Recent MVA with neck pain, patient complains of decreased sense of touch with numbness and tingling in bilateral hands with worsening headaches.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; Call does not know if there is a reason why the patient cannot have a Cervical Spine MRI.

The patient does have neurological deficits.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to chronic neck pain or suspected degenerative disease.; There is a reason why the patient cannot have a Cervical Spine MRI.; The patient is experiencing or presenting symptoms of Lower extremity weakness.

This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to neurological deficits.; The patient is experiencing or presenting symptoms of asymmetric reflexes.; There is a reason why the patient cannot have a Cervical Spine MRI.

This study is to be part of a Myelogram.; This is a request for a Cervical Spine CT

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is experiencing symptoms of radiculopathy for six weeks or more.

This is a request for a lumbar spine CT.; The patient has a history of severe low back trauma or lumbar injury.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; april 2015; There has not been any treatment or conservative therapy.; tingling trmor over shoulders and upper chest/

bilateral upper extremity pain; This study is being ordered for a neurological disorder.; 10/2015; There has not been any treatment or conservative therapy.; loss of feeling from elbow to hand on right dife
Enter answer here - or Type In Unknown If No InfAdditionally, she presents with history of neck pain. the location of discomfort is on the right side. It radiates to the upper back and intrascapular area. Initial onset was one week ago. Associated sym; This study is being ordered for a neurological disorder.; ; There has been treatment or conservative therapy.;

Headache; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/28/2015; There has been treatment or conservative therapy.; Pt c/o trigger point a base of scalp, sore eyes and headache with neck stiffness.; RX injection at base of skull.

It is not known if the patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.; It is not known if the patient had six weeks of Chiropractic care related to this episode.; UNKNOWN

Musculoskeletal: Musculoskeletal: no muscle weakness or cramps, no difficulty walking, and arthralgias/joint pain (mostly in hands) and back pain; no swelling of joints no warmth or fever of joints.  Neurologic: Neurologic: no loss of consciousness or b; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; It is not know if the patient has seen the doctor more then once for these symptoms.

patient did undergo 6 wks of physical therapy for strengthening and pain control without any improvement; This is a request for cervical spine MRI; None of the above; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness affects his ability to do activities of daily living, limits his ROM; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

possible demyelination; This study is being ordered for a neurological disorder.; 11/18/156; There has been treatment or conservative therapy.; abnormal neurological exam right upper extremity, left lower extremity. Motor and sensory deficits.; blood evaluation

radicular arm pain starting 4 months ago, moderate intensity, no obvious aggravating factors, right lateral shoulder pain radiating down arm and into 3rd finger, numbness; This is a request for cervical spine MRI; None of the above; The patient does not have new or changing neurologic signs or symptoms.; The patient has NOT had back pain for over 4 weeks.

seen in office 11/17/15 for chronic back and neck pain. Worsening for the past 3 years. Had cervical spine surgery in 2009. Has been seeing a chiropractor routinely for 3 years with some relief early on, not helping as much now. Takes Flexeril and aleve; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; chronic pain - worse in past 3 years; There has been treatment or conservative therapy.; pain, numbness and tingling; Sees a chiropractor routinely for the past 3 years

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has not failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.; Yes, the patient had six weeks of Chiropractic care related to this episode.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; Known or Suspected Multiple Sclerosis, Infection or abscess; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.; yes, there are documented clinical findings of Multiple sclerosis.

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; None of the above; &Enter Additional Clinical Information>; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; Duration of Symptoms: Start: 08/25/2015   Physical Exam Findings: 1 month of progressive worsening of neck pain with associated paresthesias in fingers and jaw r/o pinched nerve, herniated disc, discitis, disc dislocation

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; neck pain
Wants to send Pt. to a pain specialist and they require a MRI before referral.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/2014; There has been treatment or conservative therapy.; Pain for about the last year, numbness in the R arm when he moves his neck, numbness in 4th and 5th fingers and pain down into the hips and legs.; PT and pain medications

There are no documented clinical findings of immune system suppression.; This is a request for a thoracic spine MRI.; The patient is not experiencing back pain associated with abdominal pain.; The caller indicated the the study was not ordered for: Chronic Back pain, Trauma, Known or suspected tumor with or without metastasis, Follow up to or Pre-operative evaluation, or Neurological deficits."; patient had CT of t-spine on 6/25/15 was order 6 weeks of chiropractic therapy & is still experiencing pain so MRI was ordered

The patient does not have any neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to trauma or acute injury within 72 hours.; 11/03/2015 FALL Procedure Date: 11/04/2015; Abnormal; showed some wedging at t9-11 and possible compression fracture patient had a fall where he struck his back on some stairs and has had pain since that time. pain with standing, sitting, and walkin

The patient does not have any neurological deficits.; This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.

This is a request for a thoracic spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have a new foot drop.

This is a request for a thoracic spine MRI.; The study is being ordered due to Neurological deficits.; The patient is experiencing or presenting symptoms of radiculopathy documented on EMG or nerve conduction study.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 09-02-2015; There has been treatment or conservative therapy.; chronic prostatitis, neuropathy, chronic testicular pain, stabbing pain,; pt,ibuprofen

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; unknown; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Patient is having trouble walking. Stating that she has radiating pain down both legs.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

bilateral upper extremity pain; This study is being ordered for a neurological disorder.; 10/2015; There has not been any treatment or conservative therapy.; loss of feeling from elbow to hand on right dife

EVAL FOR SHOTS OR POSSIBLE NEUROSURGEON REFERRAL; This study is being ordered for a neurological disorder.; 07/01/2015; There has been treatment or conservative therapy.; WEAKNESS PARESTHESIA IN RIGHT LEG PAIN IN UPPER BACK AND LOWER BACK, RADIATING DOWN TO BUTTOCKS,POSTERIOR THIG AND DOWN TO RIGHT FOOT SYMPTOMS HAVE ONLY WORSENEED SINCE STARTING PT; PT HAS HAD PHYSICAL THERAPY, SHE HAS BEEN USING OVER THE COUNTER IBUPROFEN AND PRESCRIBED NORFLEX

has leg numbness; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness in legs with standing; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

MDO - BYPASSING CLINICALS - WILL FAX; The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for None of the above

Patient has had disc herniation repair .; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more then once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; It is not known if the patient has completed 6 weeks or more of Chiropractic care.; It is not known if the physician has directed a home exercise program for at least 6 weeks.

Patient is being referred to Orthopedic Surgeon and MRI is needed prior to Referral appointment. Patient has had NCV and is taking Norco.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more then once for these symptoms.; It is not known if the physician has directed conservative treatment for the past 6 weeks. possible demyelination; This study is being ordered for a neurological disorder.; 11/18/156; There has been treatment or conservative therapy.; abnormal neurological exam; right upper extremity, left lower extremity.; Motor and sensory deficits.; blood evaluation

pt was unable to complete PT; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more then once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.

seen in office 11/17/15 for chronic back and neck pain. Worsening for the past 3 years. Had cervical spine surgery in 2009. Has been seeing a chiropractor routinely for 3 years with some relief early on, not helping as much now. Takes Flexeril and aleve; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; chronic pain - worse in past 3 years; There has been treatment or conservative therapy.; pain, numbness and tingling; Sees a chiropractor routinely for the past 3 years

study is being requested by provider for further eval of pt symptoms, including severe pain and numbness and tingling, please see previous note; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; The patient has completed 6 weeks or more of Chiropractic care.

The study requested is a Lumbar Spine MRI.; Follow-up to Surgery or Fracture within the last 6 months; There has been a recurrence of symptoms following surgery.; The surgery was less than 6 months ago.; The patient has not been seen by or is not the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Neurologic deficits

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal nerve study involving the lumbar spine

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has completed Treatment with a facet joint or epidural injection in the past 6 weeks

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

The study requested is a Lumbar Spine MRI.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality; The patient has an Abnormal x-ray indicating a significant abnormality

Wants to send Pt. to a pain specialist and they require a MRI before referral.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/2014; There has been treatment or conservative therapy.; Pain for about the last year, numbness in the R arm when he moves his neck, numbness in 4th and 5th fingers and pain down into the hips and legs.; PT and pain medications

Patient has enlarged right ovary on Ultra sound and history of endometriosis; This study is being ordered due to organ enlargement.; There is ultrasound or plain film evidence of a pelvic organ enlargement.; This is a request for a Pelvis CT.

Patient is a 39-year-old male with the below noted history of presents chief complaint of probable recurrent inguinal hernia. He has had 2 previous surgeries on the right, last night he tripped and felt a sudden tearing sensation similar to previous he ha; This study is being ordered for some other reason than the choices given.; This is a request for a Pelvis CT.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 09-02-2015; There has been treatment or conservative therapy.; chronic prostatitis, neuropathy, chronic testicular pain, stabbing pain,; pt,ibuprofen

This is a request for a Pelvis MRI.; The request is for suspicion of joint or bone infection.

This is a request for a Pelvis MRI.; The request is for suspicion of pelvic inflammatory disease or abscess.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is not a history of upper extremity joint or long bone trauma or injury.; This is a preoperative or recent postoperative evaluation.

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is not a history of upper extremity joint or long bone trauma or injury.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is not suspicion of upper extremity bone or joint infection.; The ordering physician is not an orthopedist or rheumatologist.

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is not a history of upper extremity joint or long bone trauma or injury.; This is not a preoperative or recent postoperative evaluation.; There is suspicion of upper extremity neoplasm or tumor or metastasis.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is no suspicion of upper extremity bone or soft tissue infection.; The ordering physician is not an orthopedist.; There is a history of upper extremity trauma or injury.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is suspicion of upper extremity bone or soft tissue infection.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is suspicion of upper extremity neoplasm or tumor or metastasis.

; This study is being ordered for trauma or injury.; around 10/5/15.; There has been treatment or conservative therapy.; Unable to perform abduction of left arm; positive empty can test; increase pain meds and steroids given.

10/6/15 seen in ED for Left shoulder pain - says has been hurting for 1 month gradually worsening. In ED was unable to move arm due to pain - on exam: Left shoulder: He exhibits decreased range of motion, tenderness, pain and decreased strength. Xray - u; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

Pain and weakness increasing.; This study is being ordered for trauma or injury.; 05/30/2015; There has been treatment or conservative therapy.; pain, burning, weakness; Injections, OTC NSAIDS, wrist braces

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; Shoulder   Reported by patient.  Location: right; anterior  Quality: aching; frequent; constant; no change  Severity: moderate to severe at times  Duration: 1 weeks; continuous since onset  Timing: abrupt  Context: cannot identify (no known injury

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; unknown

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Unknown

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; It is not known if there are documented findings of crepitus.; It is not known if there are documented findings of swelling.; The ordering physician is not an orthopedist.; ; The patient is experiencing joint locking or instability.; It is not known if the patient has a documented limited range of motion on physical examination.; It is not known if there is documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is an orthopedist.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; The patient has a documented limited range of motion on physical examination.; There is no documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Patient presents with clinical rotator cuff tendonitis, decreased range of motion, and decreased strength. Patient also has spurring on x-ray results.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were normal.; The patient is experiencing joint locking or instability.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were normal.; The patient is NOT experiencing joint locking or instability.; The patient has a documented limited range of motion on physical examination.

The requested study is a Shoulder MRI.; Study is being ordered for known/suspected joint infection.; The patient has not had a recent bone scan.; The patient has not had a recent ultrasound of the shoulder.; The plain films were normal.; There are documented physical or laboratory findings of a joint infection.; The patient has not had a recent CT of the shoulder.

The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a hip CT.; This study is not being ordered in conjunction with a pelvic CT.; There is a suspected infection of the hip.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has a documented limitation of their range of motion.

Unknown; This study is being ordered for Vascular Disease.; 11/19/2015; There has been treatment or conservative therapy.; leg swelling; Unknown

Yes, this is a request for CT Angiography of the lower extremity.

"There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient does not have a documented limitation of their range of motion.; This is a request for bilateral foot MRI.; R and L foot ulcerations and infections.wounds both feet

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; nov 20 2015; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; pt ; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has not directed conservative treatment for the past 6 weeks.

; This study is being ordered for trauma or injury.; Patient had partial knee replacement in May 2015 and continues to have swelling and pain in left knee radiating into calf.; There has been treatment or conservative therapy.; Knee pain, swelling, calf pain, numbness in knee and difficulty walking.; Patient has taken anti-inflammatories, steroids, orthopaedic evaluation and physical therapy.

office visit 10/1/15 for left knee pain. Has had knee problems for years, but fell off step 2 days ago. Had Xray done in Tulsa at a convenient care. given Mobic and Norco; This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The results of the plain films is not known.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Pain greater than 3 days; No, patient has not completed and failed a course of conservative treatment.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Instability

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Limited range of motion

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Locking

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Swelling greater than 3 days

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Instability; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Limited range of motion; No, the member do not experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Locking; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Swelling greater than 3 days; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Instability

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Limited range of motion

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Swelling greater than 3 days

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; There is no suspected meniscus,pre-op or post-op evaluation,non-acute Chronic Pain,suspected tumor or Aseptic Necrosis; Limited range of motion

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Pain greater than 3 days; It is not known if the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Pain greater than 3 days; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The patient has not had recent plain films of the knee.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days; Yes, patient has completed and failed a course of conservative treatment.; Physician directed course of non-steroidal anti-inflammatory medications
This is a request for a Knee MRI.; The plain films were not normal.; arthroscopic knee surgery on 3/20/15 for meniscus tear, patient has had 2 infections that have required debriedments, has had increased pain. xrays showed complete loss of the medial compartment and bone on bone.she will likely need knee aspiration with c; Known or Suspected Joint Infection

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

; This study is being ordered for Inflammatory/ Infectious Disease.; Earlier than 2013; There has not been any treatment or conservative therapy.; Patient had recent positive ANA result, and has been referred to rheumatology for further evaluation of Lupus. She does have joint pain to both hips and right ankle. She takes Tramadol 50 mg prn and Hydrocodone-apap 7.5-325 mg prn pain. She states her hand

seen in office 10/2/15 for L hip pain. Stated she had fallen in the shower 9/30/15 and had been having pain since. Had decreased ROM, decreased flexion, decreased abduction and pain with movement of hip. Xray showed : Degeneration and spurring along the s; This is a requests for a hip MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; There is a suspicion of tendon or ligament injury.; The hip pain is due to a recent injury.; The request is for hip pain.

This is a requests for a hip MRI.; The member has failed a 4 week course of conservative management in the past 3 months.; The hip pain is chronic.; The request is for hip pain.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has a documented limitation of their range of motion.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; The patient does not have new symptoms including hematuria, new lab results or other imaging studies including ultrasound, doppler or x-ray (plain film) findings, suspicion of an adrenal mass or suspicion of a renal mass.
; This study is being ordered for Inflammatory/ Infectious Disease.; Biopsy performed on 10/08/15; There has been treatment or conservative therapy.; non-healing oral ulcerative lesion on upper inner lip with a positive biopsy Crohns disease vs. sarcoidosis; nystatin swish and swallow, acyclovir, fluconasone, Valtrex, treatment by ENT, dentist, oral and maxillofacial surgeon and oral and maxillofacial pathologist, who performed the biopsy

R/O:LIVER CARCINOMA; ABD US ON 12/22/2015 SHOWED IRREGULARLY MARGINATED HYPERECHOIC LESION MEASURING 3.8 x 1.9cm; This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.

The patient is having severe abdominal pain. Patient was sent for a US of the complete abdomen and it came back abnormal and they wanted Dr. Sarkar to consider a CT for further evaluation. The echogenic line with dense posterior shadowing is seen in the g; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone, ; Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement, ; Known or suspected infection such as pancreatitis, etc.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis

There is a nodule Midline lower chest at xiphoid process, mobile and tender found upon physical exam; This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is not a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.

This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; This is not a request for initial staging of a known tumor other than prostate.; There is no known prostate cancer with a PSA greater than 10.; No, this is not a request for follow up to a known tumor or abdominal cancer.; Yes, there is a palpable or observed abdominal mass.; No, there has not been a recent abdominal CT scan.

This is a request for an Abdomen CT.; This study is being ordered for a kidney/ureteral stone.; There is a known or a strong suspicion of kidney or ureteral stones.

This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.

This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.

This is a request for an Abdomen CT.; This study is being ordered for an infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an Abdomen CT.; This study is being ordered for an infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease.; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are clinical findings or indications of unexplained weight loss of greater than 10% body weight in 1 month

This is a request for an Abdomen CT.; This study is being ordered for organ enlargement.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.

Will fax.; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis

This is a request for CT Angiography of the Abdomen and Pelvis.

Yes, this is a request for CT Angiography of the abdomen.

; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient had an amylase lab test.; The results of the lab test were normal.

He is having a left upper quadrant abdominal pain, slowly increasing, unchanged with boel movement, and not accompanied by nausea, vomitng, diarrhea, or fever. He has a slight pain with inspiration as well. He denies GERD or dysphagia. soft, mildly tender; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is male.; A rectal exam was not performed.

laparoscopic cholecystectomy on 08/21/2014, for some right-sided abdominal pain. She states that since her operation, she has not gotten a lot of relief and still suffers with occasional episodic sharp stabbing and shooting right side pain.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; It is not known if a pelvic exam was performed.

none; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/17/15; There has not been any treatment or conservative therapy.; pain

Patient has had history of ovarian cysts and c-diff.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were normal.; The patient did not have an Ultrasound.

Patient is complaining of painless hematuria and microscopic hematuria. Patient has right flank pain. Patient needs CT scan done to rule out stone on right side.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

Patient presented to clinic with flank pain, pelvic/abdominal pain. The past 2 urinalysis has had 3 plus blood in urine. We would like to do abdomen/pelvic with stone protocol to try and see if she has a stone.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; It is not known if a pelvic exam was performed.

Patient presented to our clinic with increased abdominal pain, bloating, nausea and a history of Hepatitis C.; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

pt developed pain following gallbladder surgery 3 months ago; pt has lost 37.4 in June, 2015 and complains of constant diarrhea since surgery as well; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

pt has had a previous hysterectomy with complications caused by scar tissue from endometriosis. the clinician feels her pain may be related to ovarian cysts; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

PT WITH FEVER OF UNKNOWN ORIGIN; ELEVATED CADMIUM BLOOD LEVEL. ABD PAIN, ANOREXIA HX OF LUNG NODULES. RULE OUT CANCER; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

REBOUND AND GUARDING WITH LOWER ABDOMINAL TENDERNESS; R/O:APPENDICITIS; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is male.; A rectal exam was not performed.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; It is not known if there is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; It is not known if there are new symptoms including hematuria.; It is not known if there are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; It is not known if there is a suspicion of an adrenal mass.; It is not known if this is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor;

This is a request for an abdomen-pelvis CT combination.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is a request for initial staging of a known tumor other than prostate.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; The hematuria is due to Renal Calculi/kidney/ ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.

This is a request for an abdomen-pelvis CT combination.; The reason for the study is infection.; The patient has a fever and elevated white blood cell count or abnormal amylase/lipase.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.

This is a request for an abdomen-pelvis CT combination.; The requested studies are being ordered for known or suspected blood clot, thrombosis, or stenosis and are being ordered by a surgeon or by the attending physician on behalf of a surgeon.; Vascular disease

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; The requested study is for pre-operative evaluation.; The study is requested by a surgeon, specialist or PCP on behalf of a specialist who has seen the patient.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are clinical findings or indications of Hematuria.; Other

This is a request for an abdomen-pelvis CT combination.; There are clinical findings or indications of unexplained weight loss of greater than 10% body weight in 1 month; Other

This is a request for an abdomen-pelvis CT combination.; There are NO abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; There are known or endoscopic findings of Diverticulitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are NO abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; This study is being ordered for another reason besides Crohn's disease, Abscess, Ulcerative Colitis, Acute Non-ulcerative Colitis, Diverticulitis, or Inflammatory bowel disease.; There are no findings that confirm hepatitis C.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.; semi-acute abdominal pain, tenderness nad CVA in diabetic patient.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other;

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; - Abdominal Pain LLQ

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; <Enter Additional Clinical Information>

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; chronic pain; diagnostic lap showed L tubal cyst which was removed and not believed to be the cause of her chronic LLQ pain. Experiencing pain w/constipation and intercourse; also having sharp L low back pain

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; LLQ pain, N/V, Changes in stool, Hx of Diverticulitis

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; pain in lower abd while sitting long periods, no fever, urinary pain, n/v, bowel changes, 09/14/2015 suprapubic tenderness; Testicular US Dec 2014 has simple epididymal cyst, CBC, CMP & UA wnl, July 2015 colonoscopy has diverticulosis & polyp, otherwise normal

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; patient has a hernia - needs evaluation

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Patient has abdominal hernia and possible obstruction

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; severely sick to stomach, bloating, gas

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; stomach pain and swelling

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; worsening right lower quadrant pain, occasional right testicular pain and sometimes swollen in ribs; pain medications isn't helping

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are new symptoms including hematuria.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; It is not known if there is a suspicion of an adrenal mass.; This is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is a suspicion of an adrenal mass.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has not been a recent abdominal and or pelvis CT scan.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Mbr has abdominal pain, had US done, the radiologist suggested CT instead.

This is a request for an abdomen-pelvis CT combination.; This request is for follow up to abdominal and/or pelvic trauma ordered by a specialist or PCP on behalf of a specialist who has seen the patient.; Trauma

This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient had an lipase lab test.; The results of the lab test were abnormal.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

Unknown; This study is being ordered for Vascular Disease.; 11/19/2015; There has been treatment or conservative therapy.; leg swelling; Unknown

This request is for an Abdomen MRI.; This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for organ enlargement.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; There is an ultrasound or plain film evidence of an abdominal organ enlargement.; "The ordering physician is not an oncologist, urologist, gastroenterologist, or surgeon."; To see if mass has gotten bigger, and they have chronic kidney disease; unknown

This request is for an Abdomen MRI.; This study is being ordered for known or suspected infection.; "The ordering physician is a gastroenterologist, urologist, or infectious disease specialist."; no other info.

This request is for an Abdomen MRI.; This study is being ordered for known or suspected infection.; "The ordering physician is not a gastroenterologist, urologist, or infectious disease specialist."; "There are not physical findings or abnormal blood work consistent with peritonitis, pancreatitis, or appendicitis."; "There are no active or clinical findings of Crohn's disease, ulcerative colitis, or diverticulitis."; "There is not radiographical or ultrasound findings consistent with abnormal fluid collection, abdominal abscess, or ascites."; pt has abdominal pain and wt loss. labs were unremarkable. symptoms since 2014. pt saw G.I. specialist at Arkansas Childrens Hospital and he recommends mri

This request is for an Abdomen MRI.; This study is being ordered for pre-operative evaluation.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; Patient is currently listed for a liver transplant. Patient requires paracentesis weekly. Exam is to evaluate for HCC and elevated CA125.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study.";

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; MRI was suggested from CT scan of Abdomen and Pelvis.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; Patient had abdominal pain following a MVA. She had a CT abdomen in the ER and a mass of the right lobe of the liver was found. It recommended MRI for further evaluation.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; PT HAD AN ABDOMINAL ULTRASOUND ON 12/08/15. 4.5X 4CM HYPOECHOIC SOLID RIGHT HEPATIC MASS WAS FOUND. THE ULTRASOUND APPEARANCE DOES NOT CLEARLY BENIGN HEMANGIOMA. MRI OF THE LIVER IS SUGGESTED TO FURTHER CHARACTERIZE THIS LESION

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are no documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; 3.2 cm left adrenal mass is indeterminate on this study. This could represent an adrenal adenoma. Further evaluation with adrenal protocol CT or MRI of the abdomen without and with IV contrast is recommended for further evaluation. 2.Epiploic appendag

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are no documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; pt had an abdominal u/s on 10/20/15 the ultrasound shows multiple hepatic cysts, up to 4cm. one is complex with a septation

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.; Patient had an abnormal CT Abdomen and Pelvis. Radiologist recommended an MRI Abdomen to further evaluate the Liver.

The patient has three or more of the following conditions: age over 50, diabetes, history of hypertension, history of LDL cholesterol above 130, history of HDL cholesterol below 35, obesity (BMI above 35), and/or active history of smoking.; This request is for a Coronary CT Angiography study.; No, patient did not have a Nuclear Cardiology study within the past six months.; This study is being ordered for suspected Coronary Artery Disease (CAD) and symptomatic?; No, patient does not have new onset congestive heart failure.; We tried to authorize a CTA previously and it was denied so we done a non nuclear stress test and is was negetavie. Patient still has a high clinical suspicion for CAD; Yes, there is Chronic Chest Pain.

This request is for a Coronary CT Angiography study.; Yes, patient had a Nuclear Cardiology study within the past six months.;

Ms Alcorn-Smith is a pleasant 40 y/o lady referred for evaluation of a rapid heart rate/palpitations. She is here today for follow up after a TTE/Bubble- Mildly dilated left atrium and moderately enlarged right atrium and ventricle, normal global left ven; This study is being ordered for Vascular Disease.; Ms Alcorn-Smith is a pleasant 40 y/o lady referred for evaluation of a rapid heart rate/palpitations. She is here today for follow up after a TTE/Bubble- Mildly dilated left atrium and moderately enlarged right atrium and ventricle, normal global left ven; It is not known if there has been any treatment or conservative therapy.; Ms Alcorn-Smith is a pleasant 40 y/o lady referred for evaluation of a rapid heart rate/palpitations. She is here today for follow up after a TTE/Bubble- Mildly dilated left atrium and moderately enlarged right atrium and ventricle, normal global left ven

Yes, this is a request for CT Angiography of the abdominal arteries.

; This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are NOT benign lesions in the breast associated with an increased cancer risk.

she was told that MRI is better for screening with prior implants; This is a request for Breast MRI.; This study is being ordered for something other than known breast cancer, known breast lesions, screening for known family history, screening following genetic testing or a suspected implant rupture.

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; Yes, this is a confirmed breast cancer.; Yes, the results of this MRI (size and shape of tumor) affect the patient's further management.

< Enter answer here - or Type In Unknown If No Info Given. >; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

abnormal EKG showed left ventricular hypertrophy in a patient with tobacco use, hypertension, hyperlipidemia; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

chest pain, diabetes, hypertension, hyperlipidemia, abnormal ECG shows: borderline T abnormalities and prolonged QT interval; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Ms Lester is a very pleasant 46yo lady with significant history of morbid obesity, OSA on CPAP, HTN, allergic rhinitis, anxiety and GERD, presents as referral from Dr. Tilley's office for evaluation of abnormal EKG and chest discomfort. She reports that s; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

needs d.o.t. physical for job including stress test to keep job.; The study is being ordered for known CAD.; It is not known if the patient is presenting with new symptoms of chest pain or increasing shortness of breath.; This patient had a previous cardiac surgery or angioplasty.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

patient with tightness in chest x 6 weeks off and on, with rest, and exertion with anxiety. relieved with asa; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

provider had previously requested a myocardial perfusion test and was told Echo needed to be completed first. Echo done Dec 18 showed: Atrial fibrillation with moderate ventricular response as potential cardiac source of emboli. Left ventricular systoli; The patient's age is between 45 and 64.; The patient has had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

PT HAS RISK FACTOR OF DIABETES AND HTN ALSO HAS HX OF CVA. HE IS A SMOKER; This study is being ordered for a neurological disorder.; 12/01/2015; There has not been any treatment or conservative therapy.; NUMBNESS LEFT SIDE/SYNCOPE/BLURRED VISION/SLURRED SPEECH

pt having surgery under general anesthesia. sched for 10/28. ekg was abnormal. attempting to get clearance for surgery; This study is being ordered as a pre-operative evaluation.; It is unknown if the patient has symptoms of atypical chest pain (angina) or shortness of breath.; The patient has not had a recent non-nuclear stress test.; It is not known if the patient had a recent abnormal EKG consistent with CAD.; The patient has not had a recent stress echocardiogram.; The patient has not had a recent stress echocardiogram.; The patient has suspected CAD.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This evaluation is prior to major surgery involving general anesthesia.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

PT IS HAVING CP AND DYSPNEA. IS OBESE; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

status post pace maker; The patient's age is between 45 and 64.; The patient has had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The patient is diabetic.; The patient is less than 45 years old.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient is at least 65 years old.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have diabetes.

The study is being ordered for known CAD.; The patient is presenting new symptoms of chest pain or increasing shortness of breath.; This patient had a previous cardiac surgery or angioplasty.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The study is being ordered for known CAD.; The patient is presenting new symptoms of chest pain or increasing shortness of breath.; This patient had a previous myocardial infarction.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The study is being ordered for known CAD.; The patient is presenting new symptoms of chest pain or increasing shortness of breath.; This patient's diagnosis was established by a previous stress echocardiogram, nuclear cardiology study, or stress EKG.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; It is not known if there are documented findings of hyperlipidemia.; There are no documented clinical findings of hypertension.; The patient is not diabetic.; The patient has not had a recent non-nuclear stress test.; "Patient is not clinically obese, nor has an emphysematous chest configuration."; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; The patient is female.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; It is not known if the patient has a physical limitation to exercise.

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are documented clinical findings of hyperlipidemia.; The patient had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are documented clinical findings of hyperlipidemia.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has a physical limitation to exercise.

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are no documented clinical findings of hyperlipidemia.; The patient has not had a recent non-nuclear stress test.; This patient is clinically obese or has an emphysematous chest configuration.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; It is not known if the patient has a physical limitation to exercise.

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are no documented clinical findings of hyperlipidemia.; The patient has not had a recent non-nuclear stress test.; This patient is clinically obese or has an emphysematous chest configuration.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has a physical limitation to exercise.

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are no documented clinical findings of hyperlipidemia.; There are documented clinical findings of hypertension.; The patient has not had a recent non-nuclear stress test.; "Patient is not clinically obese, nor has an emphysematous chest configuration."; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has a physical limitation to exercise.

This study is being ordered as a pre-operative evaluation.; The patient is presenting new symptoms of chest pain or increasing shortness of breath.; The patient has not had a recent stress echocardiogram.; The patient has known CAD.; This patient's diagnosis was established by a previous stress echocardiogram, nuclear cardiology study, or stress EKG.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This evaluation is prior to major surgery involving general anesthesia.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

This study is being ordered as a pre-operative evaluation.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are no documented clinical findings of hyperlipidemia.; The patient has not had a recent non-nuclear stress test.; The patient has not had a recent stress echocardiogram.; The patient has suspected CAD.; This patient is clinically obese or has an emphysematous chest configuration.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This evaluation is prior to major surgery involving general anesthesia.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has a physical limitation to exercise.

This is a request for a MUGA scan.; This study is being ordered for Suspected Cardiomyopathy/ Myocarditis.; The patient has not recently been diagnosed with and/or treated for congestive heart failure.; The patient is presenting new cardiac signs or symptoms.; The patient has not had a recent MI.; There are not documented clinical findings consistent with a valve disease.; There are documented clinical findings consistent with hypertension.;

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a Tumor Imaging PET Scan; It is unknown why the study is being ordered.; This study is being requested for Melanoma.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lung Cancer.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; This study is being ordered for evaluation of abnormal symptoms, physical exam findings, or diagnostic studies (chest x-ray or EKG) indicative of heart disease.; This is for the initial evaluation of heart failure.; This is for the initial evaluation of abnormal symptoms, physical exam findings, or diagnostic studies (chest x-ray or EKG) indicatvie of heart disease.; The patient has shortness of breath; Known or suspected Congestive Heart Failure.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Pulmonary Hypertension.

This is a request for a Stress Echocardiogram.; None of the listed reasons for the study were selected; The member does not have known or suspected coronary artery disease

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Low Dose CT for Lung Cancer Screening (S8032); It is unknown if this patient has had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; It is unknown if the patient is presenting with pulmonary signs or symptoms of lung cancer or if there are other diagnostic test suggestive of lung cancer.

This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has NOT had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient does NOT have signs or symptoms of Lung Cancer.

This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has NOT had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient is NOT presenting with pulmonary signs or symptoms of lung cancer nor are there other diagnostic test suggestive of lung cancer.; The patient has not quit smoking.

This is a request for an abdomen-pelvis CT combination.; It is unknown if there are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; This study is being ordered for another reason besides Crohn's disease, Abscess, Ulcerative Colitis, Acute Non-ulcerative Colitis, Diverticulitis, or Inflammatory bowel disease.; There are no findings that confirm hepatitis C.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.; Pt having pain that wakes him up; having for many years, worse lately; goes through to the back; further evaluation of symptoms; Pt is being referred to a gastroenterologist

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are NO abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; This study is being ordered for another reason besides Crohn's disease, Abscess, Ulcerative Colitis, Acute Non-ulcerative Colitis, Diverticulitis, or Inflammatory bowel disease.; There are no findings that confirm hepatitis C.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.; ABD pain, irregular bowel movements, renal colic and tenderness on examination.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are NO abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; This study is being ordered for another reason besides Crohn's disease, Abscess, Ulcerative Colitis, Acute Non-ulcerative Colitis, Diverticulitis, or Inflammatory bowel disease.; There are no findings that confirm hepatitis C.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.; L inguinal Hernia

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other;

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; <Enter Additional Clinical Information>

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; elevated liver enzymes, fatigue

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient complains of abdominal pain and cramping for many months. Patient complains of quality, dull, aching cramping, spasmodic, pt also complains of constipation and able to pass flatus. Generalized LLQ, LUQ left side, symptoms made worse with constipat

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Pt experiencing acute abdominal pain; Review of Systems include: Gastrointestinal - Abdominal Pain, constipation, diarrhea, dyspepsia and nausea, but s noted in HPI, no bowel habit change, no dysphagia, no hematochezia, no hemorrhoids, no melena and no

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Pt feels like her blood vessels are cramping up. Experiencing intermittent abdominal pain described as 10 out of 10 pain. Also reports abdominal bloating, night sweats and chills

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; severe abdominal, pelvic pain.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is neither a known nor a strong suspicion of kidney or ureteral stones.; This patient is not experiencing hematuria.; Kidney/Ureteral stone; left side pain, radiating into flank area,

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement;

Radiology Services Denied Not Medically Necessary

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are no documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has not had an abdominal ultrasound, CT, or MR study."; R/O adrenal tumor per elevated labs

Radiology Services Denied Not Medically Necessary

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.; epigastric pain. He does have a history of peptic ulcer disease with GI bleeding

Radiology Services Denied Not Medically Necessary

seen in office 10/19/15 complaining of pain in low back and tailbone area. Says he has had this for years, but is worsening. Has difficulty at night when he lies down. Has been seen in the ER several times for this problem. Has tried different medicati; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; several years of pain; There has been treatment or conservative therapy.; pain in low back and sacral area; tramadol, aleve, home exercises

Radiology Services Denied Not Medically Necessary

This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are benign lesions in the breast associated with an increased cancer risk.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

; This study is being ordered as a pre-operative evaluation.; The patient is not presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had a recent non-nuclear stress test.; The patient has not had a recent abnormal EKG consistent with CAD.; The patient has not had a recent stress echocardiogram.; The patient has not had a recent stress echocardiogram.; The patient has suspected CAD.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This evaluation is prior to major surgery involving general anesthesia.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

based on his panel CT calcium score, showed a calcified coronary mass; The study is being ordered for known CAD.; The CAD diagnosis was established by something other than, a previous cardiac surgery / angioplasty, a previous MI, congestive heart failure or a previous stress echocardiogram, nuclear cardiology study or a stress EKG.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Calcium scoring test was 774. stress test to evaluate risk level; The study is being ordered for suspected CAD.; The patient is not presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had a recent non-nuclear stress test.; The patient has not had a recent abnormal EKG consistent with CAD.; The patient has not had a recent stress echocardiogram.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

chest pain, leg pain; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

diabetic patient that smokes having chest pain; needs to have nuclear medicine stress test for evaluation; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

hypertension, shortness of breath, family history of heart disease, and borderline EKG; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

I subsequently ordered an echocardiogram and a revealed surprisingly an EF of 30 to 35%, moderate mitral valve regurgitation and mitral valve prolapse. The patient had no previous cardiac studies, was unaware of any type of heart murmur.; The patient's age is between 45 and 64.; The patient has had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Left arm pain with exertion, family history of heart disease; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

patient had an abnormal ekg; This study is being ordered as a pre-operative evaluation.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient has not had a recent stress echocardiogram.; The patient has suspected CAD.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This evaluation is prior to major surgery involving general anesthesia.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

Patient is having chest tightness; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Patient is having heaviness in chest.; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Patient is having unspecified chest pain.; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

Pt has chest pain and nausea; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

seen in office 11/16/15 to discuss calcium score of 698. Majority of calcium is in LAD. Patient is a former smoker with a 30 pack year history. Patient is complaining of worsening dyspnea on exertion. provider would like a Nuclear MEDicine Myocardial test; The patient's age is between 45 and 64.; The patient has had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

seen in office 11/2/15 -had elevated BP for 1st time at 168/96. Has hyperlipidemia. Seen again 12/2/15 - BP 146/75, had irregularly irregular heart rate. No appreciable murmurs, rubs or galls. Radial pulses irregular bilaterally. EKG done - has A-fib w/; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

The patient presents today with fatigue. He really is not sleeping well. He just starting to use the CPAP. He states by the time he gets to work, he has to lay down about 8:30. He has a history of rectus sheath pain and tenderness diagnosed in Mayo Clinic; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The study is requested for congestive heart failure.; The member does not have known or suspected coronary artery disease

Radiology Services Denied Not Medically Necessary

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; The reason for ordering this study is unknown.

Radiology Services Denied Not Medically Necessary

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; This study is being ordered for evaluation of abnormal symptoms, physical exam findings, or diagnostic studies (chest x-ray or EKG) indicative of heart disease.; It is unknown if there been a change in clinical status since the last echocardiogram.; This is not for the initial evaluation of abnormal symptoms, physical exam findings, or diagnostic studies (chest x-ray or EKG) indicatvie of heart disease.

Radiology Services Denied Not Medically Necessary

UNKNOWN; This request is for a Low Dose CT for Lung Cancer Screening (S8032); No, I do not want to request a Chest CT instead of a Low Dose CT for Lung Cancer Screening (S8032).; The patient is presenting with pulmonary signs or symptoms of lung cancer or there are other diagnostic test suggestive of lung cancer.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for MRCP.; There is no reason why the patient cannot have an ERCP.
Yes, this is a request for CT Angiography of the Neck.

follow up on lung nodules; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

UNK; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; ; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; It is not known if there is x-ray evidence of a lumbar recent fracture.

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; ; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; Yes, this is a request for follow up to a known tumor or abdominal cancer.

This request is for a Low Dose CT for Lung Cancer Screening (S8032); This patient has NOT had a Low Dose CT for Lung Cancer Screening (S8032) in the past 11 months.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient does NOT have signs or symptoms of Lung Cancer.

patient has tuberous sclerosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 4/20/2013; There has been treatment or conservative therapy.; seizures, epilepsy; patient has been on various medications

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing dizziness.

R shoulder pain, evaluate the diaphragm,; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis

This is a request for an Abdomen CT.; This study is being ordered for a vascular disease.; The requested studies are not being ordered for known or suspected aneurysms, hematoma, or blood clot, thrombosis, or stenosis and are being ordered by a surgeon or by the attending physician on behalf of a surgeon.; There is evidence of vascular abnormality seen on plain film and/or Ultrasound/ Doppler.

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

patient has tuberous sclerosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 4/20/2013; There has been treatment or conservative therapy.; seizures, epilepsy; patient has been on various medications

This is a request for a MR Angiogram of the abdomen.

Radiology Services Denied Not Medically Necessary

swelling on the side of the head MDO suspects a mass; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Radiology Services Denied Not Medically Necessary

Unknown.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; May 2015; There has been treatment or conservative therapy.; Sensation and numbness to head and upper extremities, headaches, vision disturbance, ringing in ears.; Medication, adjustments, initiation of vitamin B therapy,

Radiology Services Denied Not Medically Necessary

Left arm pain and pt is on dialysis 6 days a week.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/31/2015; It is not known if there has been any treatment or conservative therapy.; Chronic back and neck pain

Radiology Services Denied Not Medically Necessary

Left arm pain and pt is on dialysis 6 days a week.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/31/2015; It is not known if there has been any treatment or conservative therapy.; Chronic back and neck pain

Radiology Services Denied Not Medically Necessary

Unknown.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; May 2015; There has been treatment or conservative therapy.; Sensation and numbness to head and upper extremities, headaches, vision disturbance, ringing in ears.; Medication, adjustments, initiation of vitamin B therapy,

; This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient has dizziness.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for trauma or injury.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2007; There has been treatment or conservative therapy.; Severe pain, numbness, tingling, weakness.; Injections, medications including hydrocodone, Tylenol, ibuprofen, gabapentin, meloxicam, methocarbamol, topiramate.

; This study is being ordered for trauma or injury.; ; It is not known if there has been any treatment or conservative therapy.; follow after surgery; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

Follow-up after resection of a left periventricular brain lesion.; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

Large tumor too large to be treated with radiation; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

none; This is a request for a brain/head CT.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

none; This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.

none; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 06/2014; There has not been any treatment or conservative therapy.; Headache,

Patient is post-op from his transsphenoidal resection of his sellar mass on 12/01/15. We are following up with him to confirm that there is no acute changes with the resection site.; This is a request for a brain/head CT.; There is not a suspected or known brain tumor.; The patient currently does not have cancer.; This is not a evaluation for a bone tumor or abnormality of the skull.; The study is requested for known or suspected brain tumor, mass or cancer.

Patient presented on 11/17/15 for her standard two month post op follow up. The patient was doing well after surgery. She was continuing to have occasional mild headaches and short term memory loss which is to be expected after subarachnoid hemorrhage. He; This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

Patient suffered a recent fall and was seen in emergency room and found to have a subdural hematoma. This is followup scan to make sure the hematoma has resolved.; This is a request for a brain/head CT.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury. recent avm resection with post op wound drainage s/s potential infection; This is a request for a brain/head CT.; There is not a suspected or known brain tumor.; The patient currently does not have cancer.; This is not a evaluation for a bone tumor or abnormality of the skull.; The study is requested for known or suspected brain tumor, mass or cancer.

Reevaluate a right frontal contusion with loss of consciousness; This is a request for a brain/head CT.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

She has a history of Ehlers-Danlos disease. She also has a history of a Chiari malformation. Basically from her Chiari malformation in her neuromuscular problems related to this, she has been wheelchair bound for the last 2 years. However, she has had ; This study is being ordered for trauma or injury.; 2001; There has been treatment or conservative therapy.; She has a history of Ehlers-Danlos disease. She also has a history of a Chiari malformation. Basically from her Chiari malformation in her neuromuscular problems related to this, she has been wheelchair bound for the last 2 years. However, she has had ; NSAIDS, PHYSICAL THERAPY, INJECTIONS, OXYCODONE

This is a request for a brain/head CT.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

This is a request for a brain/head CT.; The study is requested for history of stroke, (CVA) known or follow-up.

This is a request for a brain/head CT.; The study is requested for Hydrocephalus or congenital abnormality.

This is a request for a brain/head CT.; The study is requested for known or suspected bleed such as subdural hematoma or subarachnoid bleed.

This is a request for a brain/head CT.; There is a suspected or known brain tumor.; The study is requested for known or suspected brain tumor, mass or cancer.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

"This request is for orbit,sella, int. auditory canal,temporal bone, mastoid, CT.239.8";
"There is suspicion of bone infection, cholesteoma, or inflammatory disease.ostct"
"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious
facial bone or skull, trauma or injury.fct"; "There is suspicion of neoplasm, tumor or
metastasis.fct"

< Enter answer here - or Type In Unknown If No Info Given. >; "This request is for
face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull,
trauma or injury.fct"; "There is not a suspicion of neoplasm, tumor or metastasis.fct";
"There is not a suspicion of bone infection, [osteomyelitis].fct"; This is not a
preoperative or recent postoperative evaluation.

This is a request for neck soft tissue CT.; There has not been recent trauma or other
injury to the neck.; There is no suspicion of or known tumor, metastasis,
lymphadenopathy, or mass.; There is not a suspicion of an infection or abscess.; This is
not being ordered by an ENT specialist.

; This study is being ordered for Vascular Disease.; ; It is not known if there has been
any treatment or conservative therapy.;

Large tumor too large to be treated with radiation; This study is being ordered for a
metastatic disease.; There are 2 exams are being ordered.; One of the studies being
ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted
CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Preoperative testing for craniotomy scheduled for October 22, 2015.; This study is
being ordered for Vascular Disease.; 06/03/2015; There has not been any treatment or
conservative therapy.; Expressive aphasia, cognitive impairment

Yes, this is a request for CT Angiography of the brain.

; This study is being ordered for Vascular Disease.; ; It is not known if there has been
any treatment or conservative therapy.;

Preoperative testing for craniotomy scheduled for October 22, 2015.; This study is being ordered for Vascular Disease.; 06/03/2015; There has not been any treatment or conservative therapy.; Expressive aphasia, cognitive impairment
Yes, this is a request for CT Angiography of the Neck.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; several years ago(prior to 2013); There has been treatment or conservative therapy.; back pain, radiating into lower extremities; neck pain; physical therapy; medication; chiropractor

CONTINUED EVALUATION; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/17/2013; There has been treatment or conservative therapy.; HISTORY OF PLEXIFORM NEUROFIBROMA AND NEUROFIBROMATOSIS TYPE 1; FRONTAL ORBITAL ADVANCEMENT, ORBITAL EXENTERATION AND RESECTION OF TUMOR FROM THE CAVERNOUS SINUS

EVALUATION OF DEVELOPMENTAL VENOUS ANOMALY; This study is being ordered for Congenital Anomaly.; 10/17/2013; There has not been any treatment or conservative therapy.; SEIZURES, BLACKING OUT SPELLS, STARING SPELLS,

OPHTHAMOLOGY CHANGES - HEADACHE.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Pt has tried some PT for the spine which did not work; This study is being ordered for trauma or injury.; 2 years ago; There has been treatment or conservative therapy.; Pt has headaches/ vision changes/ neck pain/ imbalance/ poor bladder emptying/ joint and muscle aches/ dizziness/ throbbing stabbing pain in the head; Medications

There is an immediate family history of aneurysm.; This is a request for a Brain MRA.
There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient has a known aneurysm.; This is a request for a Brain MRA.

This is a post op evaluation of known Intracerebral hemorrhage/arteriovenous malformation; This study is being ordered for Vascular Disease.; May 2015; There has been treatment or conservative therapy.; Dizziness, lightheadedness, left arm/leg weakness; Craniotomy/microsurgical resection in August 2015. The exam Dr. Krisht is ordering now is a follow up to that surgery.

The patient has had a recent MRI or CT for these symptoms.; This is a request for a Neck MR Angiography.

The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; "There is a sudden onset of one-sided weakness, speech impairment, vision defects or severe dizziness."; This is a request for a Neck MR Angiography.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; It is unknown if the patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or TIA (transient ischemic attack).; It is unknown if this study is being ordered as a 12 month annual follow up.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.
; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient is experiencing vertigo

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a neurological disorder.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; 12/4/2007; There has been treatment or conservative therapy.; Weakness, falls, blurred vision, severe headaches, severe back pain, dizziness.; Brain surgery 11/18/13. Medications over the counter and prescription, physical therapy.

; This study is being ordered for a neurological disorder.; Patient says this has been going on for 30 years. First seen here 4/29/13.; There has been treatment or conservative therapy.; Sharp shooting constant pain and weakness. Post lumbar discectomy and craniotomy.; PT in the past. Medications including ibuprofen, Tylenol, Lasix, Valium, Baclofen, Tripleptal, Topomax, Gabapentin, Percocet.

; This study is being ordered for a neurological disorder.; Patient started having headaches since 2010.; There has been treatment or conservative therapy.; weakness, dizziness, falls, headaches; Patient is postop craniectomy,

; This study is being ordered for a neurological disorder.; Patient states 6 years.; There has been treatment or conservative therapy.; weakness, falls, pain, unsteady gait, numbness, blurred vision.; Physical therapy and medication including gabapentin and propranolol.

; This study is being ordered for a neurological disorder.; Patient states this has been going on for about 6 years.; There has been treatment or conservative therapy.; 37 year old femal with a host of symptoms including occ double vision, clicking in right ear, suboccipital headacehes to right side of body exacerbated by Valsalva, occasion slurred speech, difficulty swallowing, difficulty with fine movement right hand, ; Physical therapy does not help. Medication including hydrocodone and gabapentin does not help.

; This study is being ordered for Congenital Anomaly.; 8/19/2010; There has been treatment or conservative therapy.; HEADACHES; BONY DECOMPRESSION POST PARTIAL THICKNESS DURAPLASTY 2010, REPEAT CHIARI DECOMPRESSION WITH INTRADURAL EXPLORATION, CEREBELLAR TONSILLAR SHRINKAGE AND DURAPLASTY 6/24/15.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/04/2015; There has been treatment or conservative therapy.; h/a; thoracic pain and lbp; pain radiates to the rt leg; tingling and numbness; muscle relaxer and Mobic; otc tylenol

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2007; There has been treatment or conservative therapy.; Severe pain, numbness, tingling, weakness.; Injections, medications including hydrocodone, Tylenol, ibuprofen, gabapentin, meloxicam, methocarbamol, topiramate.

10/19/15 Scelitta Porter presents today with basically pain all over. She last had a microdisectomy per Dr. Willis on April 15th and did not make any of her followup appointments. She reports increased instability with her gait. She has fallen multipl; This study is being ordered for a neurological disorder.; 10/19/15; There has been treatment or conservative therapy.; INSTABILITY WITH GAIT, palpable mass to the left chest wall, NECK PAIN, FALLEN SEVERAL TIMES; ESI INJECTIONS, HOME EXERCISE, MEDICATIONS,
2 YEAR FOLLOW UP IN MEMBER WITH HISTORY OF ANAPLASTIC EPENDYMOMA OF THE POSTERIOR FOSSA.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR ; This study is being ordered for Congenital Anomaly.; 7/7/2008; There has not been any treatment or conservative therapy.; 9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR
Abnormal findings on prior imaging along with abnormal symptoms. R/O arachnoidcoele/hydrocephalitis/ac malformation; This study is being ordered for Congenital Anomaly.; 9/01/2014; There has been treatment or conservative therapy.; Low back pain, abnormalities on prior imaging.; Physical therapy, brace, prescription therapy
ANNUAL FOLLOW UP OF CHIARI I MALFORMATION; This study is being ordered for Congenital Anomaly.; 8/5/2013; There has not been any treatment or conservative therapy.; CHIARI I MALFORMATION AND GROWTH HORMONE DEFICIENCY, HEADACHES

ANNUAL FOLLOW UP TO SEE IF SURGICAL INTERVENTION IS NEEDED; This study is being ordered for Congenital Anomaly.; 11/18/2011; There has not been any treatment or conservative therapy.; SNORING, DIFFICULTY INITIATING AND MAINTAINING SLEEP, GASTROSOPHAGEAL REFLUX, EOSINOPHILIC ESOPHAGITIS

CONTINUED EVALUATION; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/17/2013; There has been treatment or conservative therapy.; HISTORY OF PLEXIFORM NEUROFIBROMA AND NEUROFIBROMATOSIS TYPE 1; FRONTAL ORBITAL ADVANCEMENT, ORBITAL EXENTERATION AND RESECTION OF TUMOR FROM THE CAVERNOUS SINUS

EVALUATION OF DEVELOPMENTAL VENOUS ANOMALY; This study is being ordered for Congenital Anomaly.; 10/17/2013; There has not been any treatment or conservative therapy.; SEIZURES, BLACKING OUT SPELLS, STARING SPELLS, none; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 06/2014; There has not been any treatment or conservative therapy.; Headache, Patient had microdissection of pituitary microadenoma on 9-11-15.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

Patient has hydrocephalus; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

patient has known glioblastoma; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is not described as a “thunderclap” or the worst headache of the patient’s life.

Patient sustained an epidural hematoma after a fall in October. We need to monitor the size of the epidural hematoma.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

pt has cyst on her brain, she got pregnant and had to put off the MRI; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Pt is coming for a two year follow up of a cerebral meningioma that was found incidentally while she was being worked up for stroke-like symptoms in 2012. Her last MRI was done 6/2012; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

pt with known chiari malformation-having increased headaches, dizziness and has hx of swallowing problems. need mri brain and c spine.; This study is being ordered for Congenital Anomaly.; February 2014 approximately; There has not been any treatment or conservative therapy.; headache and dizziness

R/O AVM of brain due to Sturge Weber Syndrome.  Neck/Upper back pain radiating to the bilateral UE. Bilateral hand/arm/finger numbness.; This study is being ordered for a neurological disorder.; March 2015; There has been treatment or conservative therapy.; neck pain radiating to upper back, bilateral hand/arm/finger numbness. R/O AVM of brain due to sturge Weber syndrome.; Physical therapy, dorsal spine injections

She has a history of Ehlers-Danlos disease. She also has a history of a Chiari malformation. Basically from her Chiari malformation in her neuromuscular problems related to this, she has been wheelchair bound for the last 2 years. However, she has had ; This study is being ordered for trauma or injury.; 2001; There has been treatment or conservative therapy.; She has a history of Ehlers-Danlos disease. She also has a history of a Chiari malformation. Basically from her Chiari malformation in her neuromuscular problems related to this, she has been wheelchair bound for the last 2 years. However, she has had ; NSAIDS, PHYSICAL THERAPY, INJECTIONS, OXYCODONE

This is a post op evaluation of known Intracerebral hemorrhage/arteriovenous malformation; This study is being ordered for Vascular Disease.; May 2015; There has been treatment or conservative therapy.; Dizziness, lightheadedness, left arm/leg weakness; Craniotomy/microsurgical resection in August 2015. The exam Dr. Krisht is ordering now is a follow up to that surgery.

This request is for a Brain MRI; It is unknown if the study is being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing fatigue or malaise.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing vertigo

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient did not have a normal audiogram.; The patient is experiencing hearing loss.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has not undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; The patient has a congenital abnormality.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; The patient has a congenital abnormality.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; The patient does not have a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.; The doctor does not note on exam that the patient has delirium or acute altered mental status.; The patient does have a Brain CT showing abscess, brain infection, meningitis or encephalitis.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has not undergone treatment for multiple sclerosis.; There are intermittent or new neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is a pituitary tumor or pituitary adenoma.; There are physical findings or laboratory values indicating abnormal pituitary hormone levels.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; It is not known if a biopsy has been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for a tumor.

"The ordering physician is a surgeon, pulmonologist, or cardiologist."; A Chest/Thorax CT is being ordered.; This study is being ordered for vascular disease other than cardiac.

"The ordering physician IS an oncologist, surgeon, pulmonologist, cardiologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for a pre-operative evaluation.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

10/19/15 Scelitta Porter presents today with basically pain all over. She last had a microdiscectomy per Dr. Willis on April 15th and did not make any of her followup appointments. She reports increased instability with her gait. She has fallen multiple; This study is being ordered for a neurological disorder.; 10/19/15; There has been treatment or conservative therapy.; INSTABILITY WITH GAIT, palpable mass to the left chest wall, NECK PAIN, FALLEN SEVERAL TIMES; ESI INJECTIONS, HOME EXERCISE, MEDICATIONS,

The ordering physician a Surgeon, Pulmonologist, or Cardiologist.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for follow up trauma.

R/U BIAL COMPLEX; This study is NOT being ordered for a Work-up for Suspicious Mass, Known Tumor, Known or Suspected Inflammatory Disease, etc...; This is a request for a chest MRI.

This study is being ordered for a work-up of a suspicious mass.; There is radiographic or physical evidence of a lung or chest mass.; This is a request for a chest MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; There is no reason why the patient cannot have a Cervical Spine MRI.

; This study is being ordered for a neurological disorder.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;

; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; Call does not know if there is a reason why the patient cannot have a Cervical Spine MRI.

BOTH ARE PART OF MYELOGRAMS; This study is being ordered for a neurological disorder.; JUNE 2015; There has been treatment or conservative therapy.; RADICULOPATHY WITH NUMBNESS AND TINGLING TO BILATERAL UPPER AND LOWER EXTREMITIES; ESI INJECTIONS, PHYSICAL THERAPY, HOME EXERCISE, MEDICATIONS

cervical spinal stenosis. MOD is considering surgery; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 9/1/2015; There has been treatment or conservative therapy.; Neck pain, radiculopathy, numbness bi lateral upper extremities; Patient has had anti inflammatory, Supervised physical therapy, NSAIDS

doctor ordered a ct to see more of the bone and previous hardware.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; There is no reason why the patient cannot have a Cervical Spine MRI.

Evaluation of a fracture; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; There is no reason why the patient cannot have a Cervical Spine MRI.

Pain; This study is being ordered for a neurological disorder.; 1991; There has not been any treatment or conservative therapy.; Facial spasm

part of a myelogram; This study is being ordered for a neurological disorder.; 2012; There has been treatment or conservative therapy.; neck pain radiating into Left upper extremity with weakness on left side and numbness and tingling; Physical Therapy with no relief, Epidural Steriod Injections, pain management

The patient does have neurological deficits.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to chronic neck pain or suspected degenerative disease.; There has been a supervised trial of conservative management for at least 6 weeks.; The patient is experiencing sensory abnormalities such as numbness or tingling.; There is a reason why the patient cannot have a Cervical Spine MRI.; This study is being ordered for another reason besides Abnormal gait, Lower extremity weakness, Asymmetric reflexes, Documented evidence of Multiple Sclerosis,  Bowel or bladder dysfunction, Evidence of new foot drop, etc...

The patient does have neurological deficits.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to chronic neck pain or suspected degenerative disease.; There is a reason why the patient cannot have a Cervical Spine MRI.; The patient is experiencing or presenting symptoms of Lower extremity weakness.

This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to follow-up surgery or fracture within the last 6 months.; "The patient has been seen by, or the ordering physician is, a neuro-specialist, orthopedist, or oncologist."; There is a reason why the patient cannot have a Cervical Spine MRI.

This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to pre-operative evaluation.; The patient is experiencing or presenting symptoms of abnormal gait.; There is a known condition of neurological deficits.; There is a reason why the patient cannot have a Cervical Spine MRI.

This study is to be part of a Myelogram.; This is a request for a Cervical Spine CT

; This study is being ordered for a neurological disorder.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; 9/9/15; There has been treatment or conservative therapy.; SPONDYLOSIS WITH RADICULOPATHY TO BILATERAL LOWER EXTREMITIES; HOME EXERCISE, MEDICATIONS

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;

; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.;

LUMBAR AND THORACIC CT STATUS POST MYELOGRAM TO BETTER DELINEATE IF THE L4-L5 LEVEL IS THE POSSIBLE ETIOLOGY.; This study is being ordered for a neurological disorder.; 05/19/14; There has been treatment or conservative therapy.; INCREASING PAIN IN MID BACK AND LOWER BACK THAT RADIATES RIGHT HIP AND DOWN RIGHT LEG; PATIENT HAS HAD PHYSICAL THERAPY AND INJECTIONS ALSO HAS HAD A LAMINECTOMY AND FUSION AT THE T3-T5

part of a myelogram; This study is being ordered for a neurological disorder.; 2012; There has been treatment or conservative therapy.; neck pain radiating into Left upper extremity with weakness on left side and numbness and tingling; Physical Therapy with no relief, Epidural Steriod Injections, pain management

Patient was in an MVA 13 Months ago. Additional information: He had a L1-L5 pedicle screw fixation after the MVA and left multiple left leg surgeries. Since surgery he has had an increase of pain with radicular pain. It occurs persistently. Location of pai; This study is being ordered for a neurological disorder.; 13 months; There has not been any treatment or conservative therapy.; Pain is radiated to the right thigh and right lateral thigh. The patient describes the pain as an ache, burning, discomforting and throbbing. Associated symptoms include limping, numbness in the left calf/foot, tingling in the legs and stiffness

The patient does have neurological deficits.; This is a request for a thoracic spine CT.; The study is being ordered due to chronic back pain or suspected degenerative disease.; There is a reason why the patient cannot undergo a thoracic spine MRI.; The patient is experiencing or presenting lower extremity weakness.

These are needed to view the stability of previous fusion at the T12 L1 level.; This study is being ordered for a neurological disorder.; 09/18/2014; There has been treatment or conservative therapy.; Chronic weakness distally in the right lower extremity with severe back pain in the right lower back. Previous fusion at T12 L1 level.; Patient wears an AFO brace for his right lower extremity weakness.

; This study is being ordered for a neurological disorder.; ; There has been treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; 9/9/15; There has been treatment or conservative therapy.; SPONDYLOSIS WITH RADICULOPATHY TO BILATERAL LOWER EXTREMITIES; HOME EXERCISE, MEDICATIONS

; This study is being ordered for a neurological disorder.; Since 2006; It is not known if there has been any treatment or conservative therapy.; Weakness, falls, requires cane for ambulation.The pain radiates from the midline at the lumbosacral junction and out into the left buttock, down the posterior thigh to the knee. He has numbness and tingling into the left foot particularly the lateral 3 to

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

Previous fusion at T12 L1 level.; Patient wears an AFO brace for his right lower extremity weakness.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is a preoperative or recent post-operative evaluation.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is experiencing symptoms of radiculopathy for six weeks or more.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is not experiencing symptoms of radiculopathy for six weeks or more.; There is no neurologic symptoms of bowel or urinary bladder dysfunction.; There is no suspicion of lumbar spine infection.; There is no suspicion of lumbar spine neoplasm or tumor or metastasis.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is to be part of a myelogram or discogram.

This is a request for a lumbar spine CT.; The patient has a history of severe low back trauma or lumbar injury.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness in arms and hands; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if there is x-ray evidence of a recent cervical spine fracture.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for cervical spine MRI; None of the above; It is not known if the patient does have new or changing neurologic signs or symptoms.; It is not known if the patient has had back pain for over 4 weeks.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 02/12/15; There has been treatment or conservative therapy.; severe upper extremity neck pain radiating bilaterally, weakness on upper and lower, severe right hip pain; meds hydrocodone, ibuprofen ,valium ,flexeril

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 05/1/2014; There has been treatment or conservative therapy.; Pain with radiculopathy, numbness, tingling.; Surgery in both areas and steroid injections. anti inflammatory.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/15/15; There has been treatment or conservative therapy.; gait/unable to walk/numbness and tingling in both arms; medications

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2012; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; mediccations; anti-inflammatories

; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

; This study is being ordered for a neurological disorder.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; ; There has been treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; 4/2015; There has been treatment or conservative therapy.; ; PHYSICAL THERAPY, HOME EXERCISE AND ESI INJECTIONS

; This study is being ordered for a neurological disorder.; Patient says this has been going on for 30 years. First seen here 4/29/13.; There has been treatment or conservative therapy.; Sharp shooting constant pain and weakness. Post lumbar discectomy and craniotomy.; PT in the past. Medications including ibuprofen, Tylenol, Lasix, Valium, Baclofen, Tripleptal, Topomax, Gabapentin, Percocet.

; This study is being ordered for a neurological disorder.; Patient started having headaches since 2010.; There has been treatment or conservative therapy.; weakness, dizziness, falls, headaches; Patient is postop craniectomy,

; This study is being ordered for a neurological disorder.; Patient states 6 years.; There has been treatment or conservative therapy.; weakness, falls, pain, unsteady gait, numbness, blurred vision.; Physical therapy and medication including gabapentin and propranolol.

; This study is being ordered for Congenital Anomaly.; 09/20/2014; There has been treatment or conservative therapy.; FEET ARE TURNING IN; MYELOMENINGOCELE CLOSURE, EVALAUTION NEEDED TO RULE OUT TETHERED CORD

; This study is being ordered for Congenital Anomaly.; 12/16/2013; There has been treatment or conservative therapy.; HAS PFEIFFER SYNDROME, CRANIOSYNOSTOSIS, CHIARI I MALFORMATION; MULTIPLE SUTURE CRANIOSYNOSTOSIS, MULTIPLE CRANIOPLASTY PROCEDURES TO CORRECT HIS HEAD SHAP DUE TO INCREASED ICP, UNDERWENT BILATERAL OPTIC NERVE CANAL DECOMPRESSION.

; This study is being ordered for Congenital Anomaly.; 8/19/2010; There has been treatment or conservative therapy.; HEADACHES; BONY DECOMPRESSION POST PARTIAL THICKNESS DURAPLASTY 2010, REPEAT CHIARI DECOMPRESSION WITH INTRADURAL EXPLORATION, CEREBELLAR TONSILLAR SHRINKAGE AND DURAPLASTY 6/24/15.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/2014; It is not known if there has been any treatment or conservative therapy.; Neck pain that has become progressive/Turning head produces significant pain.; Back pain with inability to sit in car for very long/constanly shifting weight

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2007; There has been treatment or conservative therapy.; Severe pain, numbness, tingling, weakness.; Injections, medications including hydrocodone, Tylenol, ibuprofen, gabapentin, meloxicam, methocarbamol, topiramate.

; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.;

; This study is being ordered for trauma or injury.; January 2013; There has been treatment or conservative therapy.; neck pain with stiffness and back pain with leg symptoms; Physical therapy as well as chiropractic care

10/19/15 Scelitta Porter presents today with basically pain all over. She last had a microdiscectomy per Dr. Willis on April 15th and did not make any of her followup appointments. She reports increased instability with her gait. She has fallen multipl; This study is being ordered for a neurological disorder.; 10/19/15; There has been treatment or conservative therapy.; INSTABILITY WITH GAIT, palpable mass to the left chest wall, NECK PAIN, FALLEN SEVERAL TIMES; ESI INJECTIONS, HOME EXERCISE, MEDICATIONS,

2 YEAR FOLLOW UP IN MEMBER WITH HISTORY OF ANAPLASTIC EPENDYMOMA OF THE POSTERIOR FOSSA.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR ; This study is being ordered for Congenital Anomaly.; 7/7/2008; There has not been any treatment or conservative therapy.; 9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR

Abnormal findings on prior imaging along with abnormal symptoms. R/O arachnoidocele/hydrocephalus/ac malformation; This study is being ordered for Congenital Anomaly.; 9/01/2014; There has been treatment or conservative therapy.; Low back pain, abnormalities on prior imaging.; Physical therapy, brace, prescription therapy

ANNUAL FOLLOW UP OF CHIARI I MALFORMATION; This study is being ordered for Congenital Anomaly.; 8/5/2013; There has not been any treatment or conservative therapy.; CHIARI I MALFORMATION AND GROWTH HORMONE DEFICIENCY, HEADACHES

ANNUAL FOLLOW UP TO SEE IF SURGICAL INTERVENTION IS NEEDED; This study is being ordered for Congenital Anomaly.; 11/18/2011; There has not been any treatment or conservative therapy.; SNORING, DIFFICULTY INITIATING AND MAINTAINING SLEEP, GASTROESOPHAGEAL REFLUX, EOSINOPHILIC ESOPHAGITIS

FOLLOW UP OF SPINAL ABNORMALITIES; This study is being ordered for Congenital Anomaly.; 8/21/2013; There has not been any treatment or conservative therapy.; CONGENITAL SCOLIOSIS THAT HAS PROGRESSIVELY GOTTEN WORSE, FATTY FILUM.

It is not known if the patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.; No, the patient did not have six weeks of Chiropractic care related to this episode.; Dr Campbell is looking for possible cervical syringomyelia

It is not known if the patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.; No, the patient did not have six weeks of Chiropractic care related to this episode.;

OPHTHAMOLOGY CHANGES - HEADACHE;; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Patient born with Klippel Feil syndrome; This study is being ordered for Congenital Anomaly.; Birth; There has been treatment or conservative therapy.; Neck pain, mid back pain, headaches, bilateral upper and lower extremity weakness; Cervical appliances. physical therapy/heat/ice cold packs

Patient is ready to explore surgical options at this time need a new updated MRI; This study is being ordered for a neurological disorder.; October 2013; There has been treatment or conservative therapy.; Neck pain that radiates to UE with numbness and tingling in the fingers.; Low back pain that radiates to bilateral LE; Medicine prescription and OTC and Physical Therapy

pt with known chiari malformation-having increased headaches, dizziness and has hx of swallowing problems. need mri brain and c spine.; This study is being ordered for Congenital Anomaly.; February 2014 approximately; There has not been any treatment or conservative therapy.; headache and dizziness

Rule out cervical stenosis and lumbar stenosis; This study is being ordered for a neurological disorder.; 8/15/2015; There has been treatment or conservative therapy.; Radiculopathy, numbness in bi lateral hands and pain in the legs; Supervised physical Therapy, NSAID's

ruptured disc for possible surgery and stenosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 04/20/2015; There has been treatment or conservative therapy.; back and leg pain, neck and shoulder pain; surgery, physical therapy, medications, injections

She has a history of Ehlers-Danlos disease. She also has a history of a Chiari malformation. Basically from her Chiari malformation in her neuromuscular problems related to this, she has been wheelchair bound for the last 2 years. However, she has had ; This study is being ordered for trauma or injury.; 2001; There has been treatment or conservative therapy.; She has a history of Ehlers-Danlos disease. She also has a history of a Chiari malformation. Basically from her Chiari malformation in her neuromuscular problems related to this, she has been wheelchair bound for the last 2 years. However, she has had ; NSAIDS, PHYSICAL THERAPY, INJECTIONS, OXYCODONE

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has not failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.; No, the patient did not have six weeks of Chiropractic care related to this episode.; Arnold chiari repair 05/2015 H/a Blurred vision

The patient is presenting new symptoms.; It is not known if the study is for follow up or staging.; This is a request for cervical spine MRI; "The patient is being seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist."; Known Tumor with or without metastasis

This is a pleasant 32F with complaints of interscapular pain and N/T in her right arm and leg. She has moderate scoliotic curve in her thoracic spine on xrays. We will start PT and obtain an MRI of her cervical and thoracic spine for the N/T and scoliotic; This study is being ordered for a neurological disorder.; 10/13/2015; She has moderate scoliotic curve in her thoracic spine on xrays. We will start PT and obtain an MRI of her cervical and thoracic spine for the N/T and scoliotic curve. She is not myelopathic on exam. She is in agreement with the plan today.; There has been treatment or conservative therapy.; This is a pleasant 32F with complaints of interscapular pain and N/T in her right arm and leg. She has moderate scoliotic curve in her thoracic spine on xrays. We will start PT and obtain an MRI of her cervical and thoracic spine for the N/T and scoliotic; physical therapy 10/22/2015

This is a request for cervical spine MRI; "The patient has been seen by, or the ordering physician is, a neuro-specialist, orthopedist, or oncologist."; Follow-up to Surgery or Fracture within the last 6 months

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if the patient has new signs or symptoms of bladder or bowel dysfunction.; There is x-ray evidence of a recent cervical spine fracture.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; It is not known if there is evidence of tumor or metastasis on bone scan or x-ray.; Suspected Tumor with or without Metastasis; abnormal MRI of cervical without. Radiologist & neurosurgeon recommends new cervical MRI with/without

This is a request for cervical spine MRI; Known or Suspected Multiple Sclerosis, Infection or abscess; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.; yes, there are documented clinical findings of Multiple sclerosis.

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; None of the above; MEMBER WITH HISTORY OF CHIARI MALFORMATION THAT IS ASYMPTOMATIC. NEUROSURGEON RECOMMENDS MRI CERVICAL SPINE FOR CONTINUED FOLLOW UP OF THE CHIARI MALFORMATION; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; None of the above; pt with chiari malformation. hx of headaches, dizziness and double vision.; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; None of the above; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; Pre-Operative Evaluation; No, the last Cervical spine MRI was not performed within the past two weeks.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; previous mri found spondylolisthesis

This is a request for cervical spine MRI; There is no evidence of tumor or metastasis on a bone scan or x-ray.; Suspected Tumor with or without Metastasis;

This is a request for cervical spine MRI; Trauma or recent injury; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This study is being ordered for staging.; This is a request for cervical spine MRI; Known Tumor with or without metastasis; The patient has been seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist.
we are doing work up for multiple sclerosis or spinal tumors; This study is being ordered for a neurological disorder.; 7/2015; There has not been any treatment or conservative therapy.; blurred vision and stool incontinence

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a thoracic spine MRI.; None of the above; It is not known if the patient does have new or changing neurologic signs or symptoms.; It is not known if the patient has had back pain for over 4 weeks.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/15/15; There has been treatment or conservative therapy.; gait/unable to walk/numbness and tingling in both arms; medications

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 2012; There has been treatment or conservative therapy.; Low back pain, weakness, thoracic pain and pain L lower extremities. Pt has a throbbing and stabbing sensation.; Pt has had medication, PT, and Chiropractic care ; The patient is not presenting new symptoms.; This study is being ordered for follow-up.; This is a request for a thoracic spine MRI.; Known Tumor with or without metastasis; The patient has been seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist.; The last Thoracic Spine MRI was performed within the past 10 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

; This study is being ordered for a neurological disorder.; Patient says this has been going on for 30 years. First seen here 4/29/13.; There has been treatment or conservative therapy.; Sharp shooting constant pain and weakness. Post lumbar discectomy and chraniotomy.; PT in the past. Medications including ibuprofen, Tylenol, Lasix, Valium, Baclofen, Tripleptal, Topomax, Gabapentin, Percocet.

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for Congenital Anomaly.; 09/20/2014; There has been treatment or conservative therapy.; FEET ARE TURNING IN; MYELOMENINGOCELE CLOSURE, EVALAUTION NEEDED TO RULE OUT TETHERED CORD

; This study is being ordered for Congenital Anomaly.; 12/16/2013; There has been treatment or conservative therapy.; HAS PFEIFFER SYNDROME, CRANIOSYNOSTOSIS, CHIARI I MALFORMATION; MULTIPLE SUTURE CRANIOSYNOSTOSIS, MULTIPLE CRANIOPLASTY PROCEDURES TO CORRECT HIS HEAD SHAP DUE TO INCREASED ICP, UNDERWENT BILATERAL OPTIC NERVE CANAL DECOMPRESSION.

; This study is being ordered for Congenital Anomaly.; 8/19/2010; There has been treatment or conservative therapy.; HEADACHES; BONY DECOMPRESSION POST PARTIAL THICKNESS DURAPLASTY 2010, REPEAT CHIARI DECOMPRESSION WITH INTRADURAL EXPLORATION, CEREBELLAR TONSILLAR SHRINKAGE AND DURAPLASTY 6/24/15.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/04/2015; There has been treatment or conservative therapy.; h/a; thoracic pain and lbp; pain radiates to the rt leg; tingling and numbness; muscle relaxer and Mobic; otc tylenol

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2007; There has been treatment or conservative therapy.; Severe pain, numbness, tingling, weakness.; Injections, medications including hydrocodone, Tylenol, ibuprofen, gabapentin, meloxicam, methocarbamol, topiramate.

10/19/15 Scelitta Porter presents today with basically pain all over. She last had a microdiskectomy per Dr. Willis on April 15th and did not make any of her followup appointments. She reports increased instability with her gait. She has fallen multipl; This study is being ordered for a neurological disorder.; 10/19/15; There has been treatment or conservative therapy.; BACK PAIN, LEG PAIN, FALLING, ABNORMAL GAIT; ESI INJECTIONS, HOME EXERCISE, MEDICATIONS
2 YEAR FOLLOW UP IN MEMBER WITH HISTORY OF ANAPLASTIC EPENDYMOMA OF THE POSTERIOR FOSSA.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR ; This study is being ordered for Congenital Anomaly.; 7/7/2008; There has not been any treatment or conservative therapy.; 9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR
Abnormal findings on prior imaging along with abnormal symptoms. R/O arachnoidocoele/hydrdocephalitis/ac malformation; This study is being ordered for Congenital Anomaly.; 9/01/2014; There has been treatment or conservative therapy.; Low back pain, abnormalities on prior imaging.; Physical therapy, brace, prescription therapy

ANNUAL FOLLOW UP TO SEE IF SURGICAL INTERVENTION IS NEEDED; This study is being ordered for Congenital Anomaly.; 11/18/2011; There has not been any treatment or conservative therapy.; SNORING, DIFFICULTY INITIATING AND MAINTAINING SLEEP, GASTROSOPHAGEAL REFLUX, EOSINOPHILIC ESOPHAGITIS

FOLLOW UP OF SPINAL ABNORMALITIES; This study is being ordered for Congenital Anomaly.; 8/21/2013; There has not been any treatment or conservative therapy.; CONGENITAL SCOLIOSIS THAT HAS PROGRESSIVELY GOTTEN WORSE, FATTY FILUM.

FOR TREATMENT PLAN; This study is being ordered for a neurological disorder.; 11-2-15; There has not been any treatment or conservative therapy.; PATIENT IS HAVING LEG WEAKNESS AND PAIN. PATIENT IS HAVING LOW BACK AND MID BACK PAIN. PATIENT IS HAVING PARESTHISIAS IN BILATERAL LEGS AND DISTAL LEG PAIN.

It is not known if the patient has any neurological deficits.; This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing sensory abnormalities such as numbness or tingling.

None; This study is being ordered for a neurological disorder.; since 2010; There has been treatment or conservative therapy.; pt has weakness, bowel bladder changes, pain with numbness . tonsillar herniation 1 cm on the right and 3to 4 cm on the left that is crowding of foramen magnum; Pain meds , home therapy

Patient born with Klippel Feil syndrome; This study is being ordered for Congenital Anomaly.; Birth; There has been treatment or conservative therapy.; Neck pain, mid back pain, headaches, bilateral upper and lower extremity weakness; Cervical appliances. physical therapy/heat/ice cold packs

pt had a T12 metastatic breast cancer lesion with onset of pain and weakness; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

R/O AVM of brain due to Sturge Weber Syndrome.; Neck/Upper back pain radiating to the bilateral UE. Bilateral hand/arm/finger numbness.; This study is being ordered for a neurological disorder.; March 2015; There has been treatment or conservative therapy.; neck pain radiating to upper back, bilateral hand/arm/finger numbness. R/O AVM of brain due to sturge Weber syndrome.; Physical therapy, dorsal spine injections

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; Her worse pain is between her shoulder blades in her upper back. This pain started about two years ago. She was doing a very labor intensive job at that time. She ended up having to leave her job. It is located midline. It radiates to her chest at times. ; The patient is experiencing or presenting symptoms of lower extremity weakness documented on physical exam.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; mri of cervical and lumbar were normal but patient is still is a lot of pain; The patient is experiencing or presenting symptoms of lower extremity weakness documented on physical exam.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing or presenting symptoms of abnormal gait.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing or presenting symptoms of asymmetric reflexes.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing sensory abnormalities such as numbness or tingling.; The patient is not experiencing or presenting symptoms of abnormal gait, lower extremity weakness, asymmetric reflexes, fracture, radiculopathy or bowel or bladder dysfunction.

The patient does not have any neurological deficits.; This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.

This is a pleasant 32F with complaints of interscapular pain and N/T in her right arm and leg. She has moderate scoliotic curve in her thoracic spine on xrays. We will start PT and obtain an MRI of her cervical and thoracic spine for the N/T and scoliotic; This study is being ordered for a neurological disorder.; 10/13/2015; She has moderate scoliotic curve in her thoracic spine on xrays. We will start PT and obtain an MRI of her cervical and thoracic spine for the N/T and scoliotic curve. She is not myelopathic on exam. She is in agreement with the plan today.; There has been treatment or conservative therapy.; This is a pleasant 32F with complaints of interscapular pain and N/T in her right arm and leg. She has moderate scoliotic curve in her thoracic spine on xrays. We will start PT and obtain an MRI of her cervical and thoracic spine for the N/T and scoliotic; physical therapy 10/22/2015

This is a request for a thoracic spine MRI.; Pre-Operative Evaluation; Surgery is scheduled within the next 4 weeks.; No, the last Thoracic Spine MRI was not performed within the past two weeks.

This is a request for a thoracic spine MRI.; The study is being ordered due to Neurological deficits.; ; The patient is experiencing or presenting symptoms of lower extremity weakness documented on physical exam.

Thoracic syrinx identified on non contrast MRI Thoracic spine. Need MRI with and without contrast to delineate margins and assess evolution of syrinx most likely due to trauma from hard fall. Need MRI lumbar spine to identify cause of lower back pain with; This study is being ordered for a neurological disorder.; 1/1/2012; There has been treatment or conservative therapy.; Bilateral mid back pain with radiation to lower back. Joint pain, loss of balance, numbness to bilateral fingertips and bilateral toes w/ ventral aspect of foot numbness. Difficulty walking and with daily activities. Now with loss of balance causing falls; Epidural steroid injections - three times. Moderate pain relief w/ return of full symptoms after 3 months.  Physical therapy and exercise- minimal pain relief, numbness still present.  Tramadol, Zanaflex- minimal relief. we are doing work up for multiple sclerosis or spinal tumors; This study is being ordered for a neurological disorder.; 7/2015; There has not been any treatment or conservative therapy.; blurred vision and stool incontinence

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.; IN THE LEG BOTH

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Document exam findings; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 02/12/15; There has been treatment or conservative therapy.; severe upper extremity neck pain radiating bilaterally, weakness on upper and lower, severe right hip pain; meds hydrocodone, ibuprofen ,valium ,flexeril

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 05/1/2014; There has been treatment or conservative therapy.; Pain with radiculopathy, numbness, tingling.; Surgery in both areas and steroid injections. anti inflammatory.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/08/15 first visit- has been suffering from pain with for 6 yrs; There has not been any treatment or conservative therapy.; back pain-

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 2012; There has been treatment or conservative therapy.; Low back pain, weakness, thoracic pain and pain L lower extremities. Pt has a throbbing and stabbing sensation.; Pt has had medication, PT, and Chiropractic care ; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.;

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; ; It is not known if the patient has new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Range of motion in the Lumbar Spine: Flexion: Reduced by 30-40% Extension: Reduced by 30-40% Right Rotation: Reduced by 30-40% Left Rotation: Reduced by 30-40% Right Side Bend: Reduced by 30-40% Left Side Bend: Reduced by 30-40%; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

; This study is being ordered for a neurological disorder.; Patient says this has been going on for 30 years. First seen here 4/29/13.; There has been treatment or conservative therapy.; Sharp shooting constant pain and weakness. Post lumbar discectomy and chraniotomy.; PT in the past. Medications including ibuprofen, Tylenol, Lasix, Valium, Baclofen, Tripleptal, Topomax, Gabapentin, Percocet.

; This study is being ordered for a neurological disorder.; Since 2006; It is not known if there has been any treatment or conservative therapy.; Weakness, falls, requires cane for ambulation.The pain radiates from the midline at the lumbosacral junction and out into the left buttock, down the posterior thigh to the knee. He has numbness and tingling into the left foot particularly the lateral 3 to

; This study is being ordered for Congenital Anomaly.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for Congenital Anomaly.; 09/20/2014; There has been treatment or conservative therapy.; FEET ARE TURNING IN; MYELOMENINGOCELE CLOSURE, EVALAUTION NEEDED TO RULE OUT TETHERED CORD

; This study is being ordered for Congenital Anomaly.; 12/16/2013; There has been treatment or conservative therapy.; HAS PFEIFFER SYNDROME, CRANIOSYNOSTOSIS, CHIARI I MALFORMATION; MULTIPLE SUTURE CRANIOSYNOSTOSIS, MULTIPLE CRANIOPLASTY PROCEDURES TO CORRECT HIS HEAD SHAP DUE TO INCREASED ICP, UNDERWENT BILATERAL OPTIC NERVE CANAL DECOMPRESSION.

; This study is being ordered for Congenital Anomaly.; 8/19/2010; There has been treatment or conservative therapy.; HEADACHES; BONY DECOMPRESSION POST PARTIAL THICKNESS DURAPLASTY 2010, REPEAT CHIARI DECOMPRESSION WITH INTRADURAL EXPLORATION, CEREBELLAR TONSILLAR SHRINKAGE AND DURAPLASTY 6/24/15.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/2014; It is not known if there has been any treatment or conservative therapy.; Neck pain that has become progressive/Turning head produces significant pain.; Back pain with inability to sit in car for very long/constantly shifting weight

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2007; There has been treatment or conservative therapy.; Severe pain, numbness, tingling, weakness.; Injections, medications including hydrocodone, Tylenol, ibuprofen, gabapentin, meloxicam, methocarbamol, topiramate.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; several years ago(prior to 2013); There has been treatment or conservative therapy.; back pain, radiating into lower extremities.; neck pain; physical therapy.; medication.; chiropractor

; This study is being ordered for trauma or injury.; January 2013; There has been treatment or conservative therapy.; neck pain with stiffness and back pain with leg symptoms; Physical therapy as well as chiropractic care

10/19/15 Scelitta Porter presents today with basically pain all over. She last had a microdiscectomy per Dr. Willis on April 15th and did not make any of her followup appointments. She reports increased instability with her gait. She has fallen multiple; This study is being ordered for a neurological disorder.; 10/19/15; There has been treatment or conservative therapy.; BACK PAIN, LEG PAIN, FALLING, ABNORMAL GAIT; ESI INJECTIONS, HOME EXERCISE, MEDICATIONS
2 YEAR FOLLOW UP IN MEMBER WITH HISTORY OF ANAPLASTIC EPENDYMOMA OF THE POSTERIOR FOSSA.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR ; This study is being ordered for Congenital Anomaly.; 7/7/2008; There has not been any treatment or conservative therapy.; 9 YEAR OLD WITH HISTORY OF CHIARI I MALFORMATION, HAVING HEADACHES WITH EXERCISE, COUGHING AND SNEEZING, HEADACHES HAVE PROGRESSED IN NATURE, HAVING NECK PAIN, ALSO HAS STARTED SNORING, MRI RECOMMENDED TO EVALUATE THE CHIARI AND TO LOOK FOR ANY SYRINX OR

ANNUAL FOLLOW UP TO SEE IF SURGICAL INTERVENTION IS NEEDED; This study is being ordered for Congenital Anomaly.; 11/18/2011; There has not been any treatment or conservative therapy.; SNORING, DIFFICULTY INITIATING AND MAINTAINING SLEEP, GASTROSOPHAGEAL REFLUX, EOSINOPHILIC ESOPHAGITIS
Enter answer here - or Type In "Gait and station is shuffling and short steps "; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; ; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

FOLLOW UP OF SPINAL ABNORMALITIES; This study is being ordered for Congenital Anomaly.; 8/21/2013; There has not been any treatment or conservative therapy.; CONGENITAL SCOLIOSIS THAT HAS PROGRESSIVELY GOTTEN WORSE, FATTY FILUM.
For evaluation for possible injections.; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; WEAKNESS FOUND IN BILATERAL LEGS; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

FOR TREATMENT PLAN; This study is being ordered for a neurological disorder.; 11-2-15; There has not been any treatment or conservative therapy.; PATIENT IS HAVING LEG WEAKNESS AND PAIN. PATIENT IS HAVING LOW BACK AND MID BACK PAIN. PATIENT IS HAVING PARESTHISIAS IN BILATERAL LEGS AND DISTAL LEG PAIN.

FURTHER EVALUATION FOR INJECTINS OR SURGERY; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; WEAKNESS FOUND IN RIGHT FOOT WHEN RAISING LEG; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

lumbar radiculopathy weakness.numbness in legs and feet; The study requested is a Lumbar Spine MRI.; Pre-Operative Evaluation; Surgery is not scheduled within the next 4 weeks.

None; This study is being ordered for a neurological disorder.; since 2010; There has been treatment or conservative therapy.; pt has weakness, bowel bladder changes, pain with numbness . tonsillar herniation 1 cm on the right and 3to 4 cm on the left that is crowding of foramen magnum; Pain meds , home therapy on mri l spine without contrast there appears to be a likely intradural mass at L5/S1; This study is being ordered for a neurological disorder.; 5 years ago; There has been treatment or conservative therapy.; low back pain with radiating right leg pain; Physical Therapy in September 2015 with no relief

patient fell 10-15 feet off roof, hit concrete.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

PATIENT HAD A MRI IN JANURARY 2015, HER LEG PAIN HAS INCREASED SIGNIFICANTLY SINCE THEN.; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; PATIENT HAS BILATERAL LOWER EXTRIMITY PARESTHESIS AND BILATERAL LOWER EXTRIMITY WEAKNESS; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Patient is 2 months post operative lumbar discectomy at left L5-S1. He complains of increasing pain with no injury.Pain medications is not helping.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Patient is 3 months post op L5S1 fusion and complains of pain radiating down her right lower extremity.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Post op follow up; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

pt had a T12 metastatic breast cancer lesion with onset of pain and weakness; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

PT HAD LUMBAR DECOMPRESSION...REQUESTING MRI TO PROCEED WITH STEROID INJECTIONS  If the MRI of the lumbar spine reveals no new neurological findings we will proceed with spinal injections.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Pt recently underwent surgery.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Pt with chronic dull back pain MRI 7/22/2014 Impression: Disc dessication with assymetric right-sided disc bulge and small right subarticular annular tear at L5-S1 with mild to moderate right neural foraminal narrowing and mild indentation on the exiting ; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more then once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.

Rule out cervical stenosis and lumbar stenosis; This study is being ordered for a neurological disorder.; 8/15/2015; There has been treatment or conservative therapy.; Radiculopathy, numbness in bi lateral hands and pain in the legs; Supervised physical Therapy, NSAID's

ruptured disc for possible surgery and stenosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 04/20/2015; There has been treatment or conservative therapy.; back and leg pain, neck and shoulder pain; surgery, physical therapy, medications, injections

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Follow-up to Surgery or Fracture within the last 6 months; The patient has been seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist.

The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for Follow-up to surgery or fracture within the last 6 months; The patient been seen by or the ordering physician is a neuro-specialist, orthopedist, or oncologist.

The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for Neurologic deficits

The study requested is a Lumbar Spine MRI.; Pre-Operative Evaluation; No, the last Lumbar spine MRI was not performed within the past two weeks.; Surgery is scheduled within the next 4 weeks.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Follow-up to surgery or fracture within the last 6 months; The patient been seen by or the ordering physician is a neuro-specialist, orthopedist, or oncologist.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Neurologic deficits

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Pre-operative evaluation; The patient has not had a Lumbar Spine MRI performed within the past 2 weeks.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal nerve study involving the lumbar spine

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has completed Treatment with a facet joint or epidural injection in the past 6 weeks

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

Thoracic syrinx identified on non contrast MRI Thoracic spine. Need MRI with and without contrast to delineate margins and assess evolution of syrinx most likely due to trauma from hard fall. Need MRI lumbar spine to identify cause of lower back pain with; This study is being ordered for a neurological disorder.; 1/1/2012; There has been treatment or conservative therapy.; Bilateral mid back pain with radiation to lower back. Joint pain, loss of balance, numbness to bilateral fingertips and bilateral toes w/ ventral aspect of foot numbness. Difficulty walking and with daily activities. Now with loss of balance causing falls; Epidural steroid injections - three times. Moderate pain relief w/ return of full symptoms after 3 months. &#xOD; Physical therapy and exercise- minimal pain relief, numbness still present. &#xOD; Tramadol, Zanaflex- minimal relief. unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/08/2014; There has been treatment or conservative therapy.; neck and bilateral arm pain, weakness and numbness in the hands. back pain and buttock pain.; patient has had PT, oral medications, back surgery2/16/2015 for cervical ; This study is being ordered for some other reason than the choices given.; This is a request for a Pelvis CT.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;;

Lumbar CT revealed: images are unavailable at this time due to radiology water damage. The report indicates foraminal stenosis L5-S1 bilaterally. Symptoms are left only. A lesion was noted in the pelvis and an MRI was recommended.; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is receiving long-term steriod therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

This is a request for CT Angiography of the Abdomen and Pelvis.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; It is not known if this is a request for initial staging of a known tumor other than prostate.; There has not been a recent abdominal and or pelvis CT scan.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Radiology Services Denied Not Medically Necessary

; This study is being ordered for a neurological disorder.; ; It is not known if there has been any treatment or conservative therapy.;

This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient does NOT have a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or aneurysm.; This study is being ordered for a previous stroke or aneurysm.

Radiology Services Denied Not Medically Necessary

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

Radiology Services Denied Not Medically Necessary

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

Radiology Services Denied Not Medically Necessary

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

CTA being requested to evaluate for any potential abnormalities that would contribute to an ischemic event in a patient that does not have other contributing comorbidities.; This study is being ordered for a neurological disorder.; 11/11/15; There has been treatment or conservative therapy.; mental status changes, expressive aphasia; he has had a stroke, he has been on Aspirin and Plavix

change in basilar migraines.; This study is being ordered for a neurological disorder.; 05/05/2015; It is not known if there has been any treatment or conservative therapy.; Left side of face numbness, left arm and left leg numbness, extreme weakness, severe migraines

CTA needed due to symptoms of carotid dissection in a patient with history of carotid dissection; This study is being ordered for a neurological disorder.; 11-18-15; There has been treatment or conservative therapy.; Extreme headache, pressure sensation on back of neck, nausea, feelings similar to those of carotid dissection, patient has had carotid dissection in past; medication

Dr Krisht discussed different treatment options and the fact that in view of the persistence of his symptoms, a bypass is to be considered. However, he would like to get a CT perfusion scan to evaluate his circulation before proceeding with surgery; This study is being ordered for Vascular Disease.; 04/06/2015; There has been treatment or conservative therapy.; Pt has TIAs involving the left hemisphere and right side of his body; Pt on Plavix and Aspirin

Enter answer here - or Type In U; This study is being ordered for a neurological disorder.; 6-1-15; There has been treatment or conservative therapy.; stroke headache, dizziness extremity in weakness memory impairment tremors; medications duloxetine
Enter answer here - pt had a TIA 1 week ago, pt has a history of transposition of the great vessels; This study is being ordered for a neurological disorder.; Enter date of initial onset here - 1 week ago; There has been treatment or conservative therapy.; Describe primary symptoms here - Speech Problems; Describe treatment / conservative therapy Aspirin

evidence of old strokes were seen on MRI, significant narrowing of the vertebral artery. Dr. Krisht needs to evaluate her cerebrovascular tree closer.; This study is being ordered for Vascular Disease.; September of 2015; There has been treatment or conservative therapy.; cerebrovascular disease, dizziness, tongue numbness, memory loss, abnormal gait, "handwriting off", acute right cerebral peduncle infarct, occlude right MCA and narrowed basilar artery and CPA mass, 1.77mm right ICA aneurysm.; Anticoagulation and plaque stabilization therapy with atorvastatin/clopidogrel.

History of stroke dating to 2005, history of dvt, peripheral vascular disease; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has not been any treatment or conservative therapy.; dizziness, lightheadedness, patient is having hot flashes. Bobble vision which lasts for hours. Patient does improve after bouts of vomiting.

history of strokes in 2013 and 2014 with new onset neurological deficits--bilateral leg numbness.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/13/2013; There has been treatment or conservative therapy.; bilateral leg numbness; Aspirin 325mg daily
Patient can not feel hot or cold. Patient's symptoms started to lessen and then 6 hours later the same symptoms returned.; This study is being ordered for a neurological disorder.; 9-1-2015; There has been treatment or conservative therapy.; Dizziness, Left side of face numb and tingling, mouth droop, left eye droop, slurring speech, parasthesia in right torso and all limbs; MRI, stress ECHO, Ultrasound, was also given Plavix and Aspirin

Patient had a CVA and TIA 9/2015; This study is being ordered for a neurological disorder.; 9/25/2015; There has been treatment or conservative therapy.; Dizzy, numb in left arm and face, shaky, nervous all the time, forgetfulness, snores, difficulty sleeping, migraines, panic attacks.; Plavix then changed to Xarelto.

Patient of 53 yo rh male. n 7/15/15 episode of feeling rare, like all his body was numb, slurred speech. He understood everything on his around. His laertness was normal. Weakness that started on his left hemibody and spread all over. In the ER he was tol; This study is being ordered for a neurological disorder.; Patient of 53 yo rh male. n 7/15/15 episode of feeling rare, like all his body was numb, slurred speech. He understood everything on his around. His laertness was normal. Weakness that started on his left hemibody and spread all over. In the ER he was tol; There has been treatment or conservative therapy.; Patient of 53 yo rh male. n 7/15/15 episode of feeling rare, like all his body was numb, slurred speech. He understood everything on his around. His laertness was normal. Weakness that started on his left hemibody and spread all over. In the ER he was tol; Brain MRI done in 9/29 is reported as normal, no stroke. he was started on Plavix and Atorvastain.

possible stroke; This study is being ordered for a neurological disorder.; looking for a possible stroke; There has been treatment or conservative therapy.; Neuro#x0D; Positive#x0D; Dizziness, Headache, Memory impairment.; 11/03/2015#x0D; clopidogrel 75 mg tablet#x0D; take 1 tablet by oral route every day#x0D; 10/23/2015#x0D; Lexapro 20 mg tablet#x0D; take 1 tablet by oral route every day#x0D; 04/28/2015#x0D; losartan 50 mg tablet#x0D; take 1 tablet by oral route every day#x0D; 09/27/2015#x0D; meclizine 25 mg

She has a strong family history of cancer (Both her mother and sister) She had a Neuropsych Eval that suggested a CTA head/Neck as her decline suggested a possible vascular etiology.; This study is being ordered for a neurological disorder.; August of last year; There has been treatment or conservative therapy.; her speech is delayed and she has problems finding words and getting words out, chronic daily headaches, hearing lost in both ears, vertigo, tinnitus, and difficulty Swallowing.; Lamictal 25mg QHS titrating up to 100mg BID

She's had 3 episodes of at least some degree of loss of consciousness. One episode she was sitting outside. She then became unable to move. She says her arms and legs would not move despite her willing them to.; This study is being ordered for a neurological disorder.; October 2015; There has been treatment or conservative therapy.; She describes a "whirling" which is often severe. It has woken her up from sleep. It does not seem to be overly positional. It can occur when standing or seated. It does not seem to be exacerbated by movement.; patient has seen ENT with no confirmed inner ear source. #x0D; MRI has been done showing no source.

The episode of left weakness, tongue paresthesia, and altered thinking likely represents a TIA. The differential would include migraine with or without headache.; Continue clopidogrel.; If evaluation is otherwise unrevealing then treatment for atherosclerosis; This study is being ordered for Inflammatory/ Infectious Disease.; 10/23/2015; It is not known if there has been any treatment or conservative therapy.; Ms. Waters notes that she was feeling fine when suddenly her left arm felt rubbery or floppy or weak and she began walking funny. She discerned that the gait disorder was due to left leg weakness. Her blood pressure was checked and found to be fine. Sh

TIA or reversible ischemic neurologic deficit (RIND). He will need a CT Angiogram and MRI with and without contrast.; This study is being ordered for a neurological disorder.; In Early November; There has been treatment or conservative therapy.; Developed left facial numbness including the inside of his mouth on the left. No Sensation either internally or externally. Right hand numbness. Swallowing became difficult and he developed uncontrolled hiccoughs.; Aspirin a day unknown; This study is being ordered for a neurological disorder.; 09/10/2015; There has been treatment or conservative therapy.; DIZZINESS, AND CHRONIC HEADACHES, NECK PROBLEMS; PT, and OTC medications

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/20/15; There has not been any treatment or conservative therapy.; double vision, numbness of face and numbness and tingling of the upper extremities, memory loss

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; unknown; It is not known if there has been any treatment or conservative therapy.; unknown

vomited; This study is being ordered for a neurological disorder.; 10/03/2015; There has not been any treatment or conservative therapy.; pt is passing out, slurred speech

Want to rule out cerebral aneurysm.; This study is being ordered for trauma or injury.; 2013; There has not been any treatment or conservative therapy.; Headache that feels like an ice pick. Experiencing confusion after speaking.

With sudden onset of headache like she describes aneurysm or other vascular abnormality must be ruled out.; This study is being ordered for a neurological disorder.; Acute onset of headache, aphasia, and left hemiparesis on 9/29/15; There has been treatment or conservative therapy.; Acute onset of headache on 9/29/15 with associated aphasia and left hemiparesis. Symptoms of aphasia and left hemiparesis have resolved but headache continues on the left side of her head radiating into the left side of the neck and upper chest; Treated with a 10 day course of prednisone, pain medications

Yes, this is a request for CT Angiography of the brain.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 1 year ago; There has been treatment or conservative therapy.; Sharp throbbing pain/ nausea/photo phobia/ phono phobia; prescribed medications

; This study is being ordered for a neurological disorder.; ; It is not known if there has been any treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; 08/03/2015; There has been treatment or conservative therapy.; Extremity in weakness, gait disturbance, headache, numbness in extremity; Brain MRI and Cervical MRI

; This study is being ordered for a neurological disorder.; 8/10/15; There has been treatment or conservative therapy.; Left eye vision problems, no feeling on left side of face, face droop, confusion, very angry, left sided weakness, balance problems and no feeling in left leg.; MRI of head, MRA of head, CT of head, blood work was drawn, TEE, ECHO with bubble study all was perform while in hospital Patient was admitted into hospital and was kept there for 4 days. While in emergency room he received IV t-PA. He also received IV f

; This study is being ordered for Vascular Disease.; ; There has been treatment or conservative therapy.;

; This study is being ordered for Vascular Disease.; ; There has been treatment or conservative therapy.; Headaches seizures performances changes; gabapentin keppra

; This study is being ordered for Vascular Disease.; 01-01-2015; There has been treatment or conservative therapy.; balance problems and vertigo. burning sensation in the left shoulder area, the back of the right hand and the neck. rare headaches every few months; medications - methimazole; brain MRI 7-16-15

; This study is being ordered for Vascular Disease.; 11-05-2010; There has been treatment or conservative therapy.; memory impairment, nausea, neurological symptoms, phonophobia, and vertigo; Topamax, verapamil

Abnormal Brain MRI on 12/2/2015 that showed a stroke, R/O malignancy, vasculitis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/2/2015; There has been treatment or conservative therapy.; bladder incontinence, ABD pain/tenderness, heavy bleeding.; antibiotics for urinary issue, daily aspirin

Abnormal carotid ultrasound 50-70% right internal carotid artery stenosis.; This study is being ordered for Vascular Disease.; 3-4 months; There has been treatment or conservative therapy.; Syncope and collapse.; Medication and medical treatment.

acute infarct seen on MRI in left temporal and parietal lobes. CTA being requested to evaluate for any potential abnormalities that would contribute to an ischemic event in a patient that does not have other contributing cormorbities.; This study is being ordered for a neurological disorder.; 11/11/15; There has been treatment or conservative therapy.; mental status changes, expressive aphasia; he has had a stroke, he has been on Aspirin and Plavix

change in basilar migraines.; This study is being ordered for a neurological disorder.; 05/05/2015; It is not known if there has been any treatment or conservative therapy.; Left side of face numbness, left arm and left leg numbness, extreme weakness, severe migraines

CTA needed due to symptoms of carotid dissection in a patient with history of carotid dissection; This study is being ordered for a neurological disorder.; 11-18-15; There has been treatment or conservative therapy.; Extreme headache, pressure sensation on back of neck, nausea, feelings similar to those of carotid dissection, patient has had carotid dissection in past; medication

Enter answer here - PT CT Head showed no acute pathologic pre or post contrast head CT Findings. Noted left posterior frontal and deep white matter vascular structures likely representing a benign venous angioma. want MRI to rule out tumor, stroke, etc: ; This study is being ordered for a neurological disorder.; Enter date of initial onset here - 2 months ago; There has been treatment or conservative therapy.; Describe primary symptoms here - Associated symptoms include photophobia, phonophobia, Nausea, Dizziness. migraines last several hours and sometimes a few days.; Describe treatment / conservative therapy here - PRN ibuprofen

MRI Brian r/o tumor, compare to previous in 2014, patient has venous angioma and small abnormal WM areas in frontal lobe. MRA as well due to venous angioma found on scan in 2014, Since the headache is in the frontal area, we need to repeat his MRA to rule; This study is being ordered for a neurological disorder.; Since childhood; There has been treatment or conservative therapy.; Headaches and Difficulty seeing.; Topamax 50 mg BID.

None; This study is being ordered for a neurological disorder.; July 2015; There has been treatment or conservative therapy.; photophobia, phonophobia and dizziness with occasional double vision, ringing in left ear; meds only

OTC medications taken.; This study is being ordered for a neurological disorder.; Unknown 2012; There has not been any treatment or conservative therapy.; Dizziness, sharp throbbing pain r side of head. Photophobia, phonophobia and nausea.

PATIENT HAS BEEN IN BED FOR ATLEAST TWO WEEKS. HEADACHES ARE VERY SEVERE.; This study is being ordered for a neurological disorder.; NOVEMBER 24, 2015; It is not known if there has been any treatment or conservative therapy.; SEVERE HEADACHES, BLURRY VISION, "DROOPING SENSATION ON RIGHT SIDE OF FACE."

Patient with 2 suspicious brain lesions and vasculitis and or stroke cannot be ruled out in patient with history of CVA; There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

r/o aneurysm; This study is being ordered for a neurological disorder.; this year 2015; There has been treatment or conservative therapy.; Daily Headaches on the right side of his head that feels like aching. He admits to pulsating and throbbing.; Nortriptyline 25 mg

R/O: STENOSIS, ANEURYSM; There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

She is wanting to rule out lesions or aneurysms in the head or neck.; This study is being ordered for a neurological disorder.; 10.12.2015; There has been treatment or conservative therapy.; Headache for two weeks. In the last week he has had vision disturbance, double vision and pain in his head when he turns it.; Pt has been taking Aleve.

SUDDEN ONSET HEADACHE FAMILY HISTORY OF ANNEURYSM; This study is being ordered for a neurological disorder.; 10/01/2015; There has been treatment or conservative therapy.; SUDDEN ONSET SEVERE HEADACHE  FAMILY HISTORY OF ANNEURYSM; MEDICATION

The doctor would like to repeat the MRI scan to confirm this does not represent some other lesion besides an ischemic lesion, and when we do so she wants to do an MRA of her intracranial vessels.; This study is being ordered for Vascular Disease.; SEPTEMBER 2 2015; There has been treatment or conservative therapy.; DIZZINESS, DIFFICULTLY USING HER RIGHT HAND; CT MRI PLAVIX

the patient is having vertigo and migraines; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; the patient is having vertigo and migraines; There has not been any treatment or conservative therapy.; the patient is having vertigo and migraines

There is an immediate family history of aneurysm.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has been a stroke or TIA within the past 2 weeks.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has been a stroke or TIA within the past 2 weeks.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

There is not an immediate family history of aneurysm.; The patient has a known aneurysm.; This is a request for a Brain MRA.

This is a follow up of a known AVM; This study is being ordered for Congenital Anomaly.; December 2013; There has been treatment or conservative therapy.; Numbness in hands, impaired vision; Embolization in 2013. Microsurgical resection in 2014.

This is a request for a head and neck MR Angiogram.; There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; "There is a sudden onset of one-sided weakness, speech impairment, vision defects or severe dizziness."

This is a request for a head and neck MR Angiogram.; There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; "There is not a sudden onset of one-sided weakness, speech impairment, vision defects or severe dizziness."; This patient does not have an abnormal ultrasound of the neck.

This is a request for a head and neck MR Angiogram.; There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; "There is a sudden onset of one-sided weakness, speech impairment, vision defects or severe dizziness."; This patient does not have an abnormal ultrasound of the neck.

unknown; This study is being ordered for a neurological disorder.; Within the past 3 months; There has been treatment or conservative therapy.; nausea and photo phobia; Medications

With her age coupled with the vision changes, urinary frequency/Incontinence, and dizziness raises the possibility of a demyelinating process such as Multiple sclerosis. Given the Family history of brain aneurysm . will get Aneurysm screening.; This study is being ordered for a neurological disorder.; been ongoing for 2-3 years; It is not known if there has been any treatment or conservative therapy.; She has pain behind her right eye intermittently. this has been ongoing for 2-3 years and is often brought on by looking side to side. This is often associated with a tension type headache all over her head. She reports Nausea that occurs when she turns h

n.a; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2015; There has been treatment or conservative therapy.; weakness, speak slur; medications,

n/a; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

need to rule out myeloma.; This study is being ordered for a neurological disorder.; Diagnosed with MS in 2006; Back and right sided weakness; started May 21 2015; There has been treatment or conservative therapy.; MS with right sided weakness and thoracic back pain; patient has been given Flexeril, diclofenac and had nerve blocks with pain management

none; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

none; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for seizures.; There has NOT been a change in seizure pattern or a new seizure.; This is not a new patient.

None; This study is being ordered for a neurological disorder.; July 2015; There has been treatment or conservative therapy.; photophobia, phonophobia and dizziness with occasional double vision, ringing in left ear; meds only

numbness and tingling in extremity, r/o demyelinating process; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

numbness of her body, tingling in arms and hands, chronic pain; This study is being ordered for Vascular Disease.; 11-18-2015; There has been treatment or conservative therapy.; numbness of upper limb chronic neck pain; unknown

Onset of headache was gradual and location is frontal right parietal, temporal left and temporal right. The problem is unchanged. Associated symptoms include bladder incontinence dizziness, headache motor weakness, parathesia tingling and tremors; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has dizziness.; The patient has a sudden and severe headache.; The patient had a recent onset (within the last 3 months) of neurologic symptoms.

OTC medications taken.; This study is being ordered for a neurological disorder.; Unknown 2012; There has not been any treatment or conservative therapy.; Dizziness, sharp throbbing pain r side of head. Photophobia, phonophobia and nausea.

other neuro gave her a possible diagnosis of multiple sclerosis but never did any testing.; 45-year-old lady with some clonus in the lower extremities. She's not overly spastic. Her knees and her arms are not hyperactive as well. There is no Hoffman re; This study is being ordered for a neurological disorder.; unknown; There has been treatment or conservative therapy.; 45-year-old lady presents with clonus. This apparently is in bilateral lower extremities. She reports the clonus in her ankles. She's had multiple head injuries in the past. She was in an abusive marriage and has been knocked unconscious several times.; patient has seen numerous doctors. pain specialists and other neuro doctors.; she has been placed on baclofen and other medications to help control her symptoms.

Over the past year she reports that her headaches have returned and her vision seems to be declining too. The headache occurs all over her head and is a throbbing pain.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

Patient has Memory Loss, she frequently loses train of thought., she also has pain that radiated to the left arm, right arm, left root and right foot.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has not undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are not recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; Surgery is not planned within the next 4 weeks.; An operation for shunt placement (for brain fluid drainage) is not being considered or a non-metalic shunt is not functioning correctly.; The patient has a congenital abnormality.

Patient had a syncope episode fell and hit his head. his mom states carter came out of the bathroom and asked where am I and then he went to class and said a few more things and said his head hurt and he touched his head and had blood on his hand and thou; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested due to trauma or injury.; There are not new, intermittent symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; The trauma or injury to the head was between 24 hours and 1 week ago.

Patient had knee lesion on previous mri.; This study is being ordered for a neurological disorder.; Unknown; There has been treatment or conservative therapy.; Patient has MS. Follow up; Patient is taking medications as well as message therapy.

Patient has a history of hand tremors, memory loss and headaches over the past year. her initial MRI of brain showed a lesion in the right frontal lobe and her VER was unremarkable.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has not undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are not recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; Surgery is not planned within the next 4 weeks.; An operation for shunt placement (for brain fluid drainage) is not being considered or a non-metallic shunt is not functioning correctly.; The patient has a congenital abnormality.

PATIENT HAS BEEN IN BED FOR ATLEAST TWO WEEKS. HEADACHES ARE VERY SEVERE.; This study is being ordered for a neurological disorder.; NOVEMBER 24, 2015; It is not known if there has been any treatment or conservative therapy.; SEVERE HEADACHES, BLURRY VISION, "DROOPING SENSATION ON RIGHT SIDE OF FACE."

patient has been passing out with memory loss; This study is being ordered for a neurological disorder.; ; There has not been any treatment or conservative therapy.;

Patient has Left sided Weakness and Numbness. Symptoms began back in 2007. A Mri in April of 2015 showed two punctate white matter lesions in the right cerebral hemisphere(nonspecific).; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

patient has right sided numbness. she has right flank pain which started in April; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

Patient has Seizures and a ICH A year ago; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; It is not known if there has been a previous Brain MRI completed.

Patient has uncontrolled headache on daily basis.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

patient having episodic confusion with memory loss; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

Patient is experiencing memory loss as well as off balance and vertigo, tingling in feet and numbness.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has not undergone treatment for multiple sclerosis.; There are not intermittent or new neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.

patient is experiencing spasms,paresthesias, and we want to rule out Multiple sclerosis; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient does not have dizziness, one sided arm or leg weakness, the inability to speak, or vision changes.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for Multiple Sclerosis.; The patient has new symptoms.

Patient of 37 yo rh female with headache and h/o brain tumor coming for her follow up. She was doing well until middle of October. Since then she has 1-2 episodes per week. Intensity: 9/10. Duration: 1-2 days. She has to increase topiramate 25 mg tid sin; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

Patient of 51 yo rh male with h/o SDH 2 years ago. He fell from a roof. He had a surgical procedure 2 months after his fall in Springfield-COX. Just after that surgery he had a stroke that affected his speech and his "motor skills". Since then, he has pro; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient does not have dizziness, one sided arm or leg weakness, the inability to speak, or vision changes.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or TIA (transient ischemic attack).

Patient of 58 years old right-handed female with more than 40 years history of diabetes that seems is not in good control. She also has history of peripheral neuropathy, that most likely is related to her diabetes. She stated bilateral feet pain that is d; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are not recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.; It is not known if there a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

patient scored a 24 on her clinical SLUMS evaluation; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has a sudden change in mental status.; It is unknown why this study is being ordered.

Patient with cavernoma and stroke recently. needs follow-up; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are not recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Patient with headaches, sudden onset new worsening headache, different than prior headaches. unrelieved by acute treatment medication changes; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is not described as a “thunderclap” or the worst headache of the patient’s life.

Patient with complete loss of all sensory modalities from the head to the toe which is non-physiologic with normal exam otherwise. She relates that she has had some questionable history of neurologic abnormality whether or not she had mild Arnold-Chiari. C; This study is being ordered for a neurological disorder.; 12/01/2000; There has been treatment or conservative therapy.; Pt states she began having seizures with episodes of passing out, jerking, apparently she felt that those episodes were triggered by stress. She has numbness that goes over all her body. She feels like she has lost sensation completely of her entire body.; Keppra, Meloxicam, Oxycodon, CT,

Problem #2: Pineal mass. Radiologist recommended Gadolinium study. Depending on what this shows may need to refer her to the neurosurgeons. MRI brain reviewed today and some chronic ischemic changes seen and a pineal mass was also seen that was a ; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.
Pt blacked out while driving. Pt had headaches and N&V; This study is being ordered for a neurological disorder.; 10/2015; There has been treatment or conservative therapy.; blacking out and sprang ankle;

PT HAD AN EPISODE WHERE SHE TOOK A NAP DURING THE DAY THEN WOKE UP FROM IT AND SHE COULDN'T MAKE ANY SENSE AND SHE HAD NO MEMORY. HER MEMORY IS GETTING WORSE SHE IS SLOW TO THINK. A FEW YEARS AGO SHE HAD A TIA. SHE IS UNDER MAJOR STRESS AND THIS MAY BE A ; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient is experiencing dizziness.

Pt has been having dizziness for two months. She states that it bothers her when she is laying flat, turning over in bed, as well as sometimes when she is looking at her computer. She states it does affect her vision. She states she does not feel faint or; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has vertigo.; It is unknown why this study is being ordered.

Pt has been having problems with memory loss and confusion.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient is experiencing dizziness.

Pt has known MS; This study is being ordered for a neurological disorder.; 10-2014; There has been treatment or conservative therapy.; Pt has increased numbness and blurred vision; Pt is on Tysabri (medication)

Pt has movement disorder present for years but getting worse. R/O structural abnormality in brain; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

PT. had a motor vehicle accident on August 24th. She was briefly knocked unconscious. About 30 min after the accident she started having a severe headache. She described her migraines as across her forehead and behind her eyes. This was the worst one.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient does not have dizziness, one sided arm or leg weakness, the inability to speak, or vision changes.; It is unknown if the patient has HIV or cancer.; The patient has a sudden and severe headache.; The patient had a recent onset (within the last 3 months) of neurologic symptoms.

R/O ACUTE DISEASE- FURTHER EVAL; This study is being ordered for a neurological disorder.; 10/2014; There has been treatment or conservative therapy.; VISION CHANGES, INCREASED FATIGUE, NUMBNESS AND TINGLING IN EXTREMITIES; MEDICATIONS

r/o aneurysm; This study is being ordered for a neurological disorder.; this year 2015; There has been treatment or conservative therapy.; Daily Headaches on the right side of his head that feels like aching. He admits to pulsating and throbbing.; Nortriptyline 25 mg

REPEAT MRI OF BRAIN BECAUSE HAS MANY ISSUES AND THINK MEDICATION MAY BE ISSUES WANTS KEPPRA FOR HEADACHES. HYPONATREMIA; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 1/8/2006; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; MEDICATION NERVE CONDUCTION STUDY

Right leg weakness, right arm weakness, CVA, right sided tingling and numbness in shoulder for the last six months into all five fingers of the hand.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; It is unknown if the patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or TIA (transient ischemic attack).; This study is NOT being ordered as a 12 month annual follow up.

Rule out central nervous disorder and cervical myelopathy.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; March 2015; It is not known if there has been any treatment or conservative therapy.; Tremor bil legs for 6 months increased with standing. Left foot numbness and the right fingers numb and tingling. Muscles spasms and right trunk It triceps. Hyperflexia diffuse right greater than left.

She apparently was talking with a client and developed some pain behind her right ear. She stated that it kind of radiated down the right jaw. She then noticed that she was having difficulty with drawing of the right side of her mouth. She then had difficulty; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; There is not a new and sudden onset of a headache less than 1 week not improved by medications.; There is not a family history (parent, sibling, or child) of stroke, aneurysm, or AVM (arteriovenous malformation); Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The patient has Bell's Palsy.

She can get some blurry vision prior to the headaches which may continue during a headache. + stabs and jabs and random night time awakenings. Daily and continuous headaches since May of 2015. 2 rule out secondary disorders I will do an MRI, MRA and MRV; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

She had a large right acoustic neuroma tumor removed. There is a question about whether or not there is a recurrence of her neuroma. Dr. Krisht is ordering this MRI with contrast to help with that decision.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

She is wanting to rule out lesions or aneurysms in the head or neck.; This study is being ordered for a neurological disorder.; 10.12.2015; There has been treatment or conservative therapy.; Headache for two weeks. In the last week he has had vision disturbance, double vision and pain in his head when he turns it.; Pt has been taking Aleve.

She reports that in the last decade her headaches have increased in frequency and severity but she is never had an MRI. Get some blurry vision and some conjunctival injection along with some nausea, photophobia, phonophobia.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

She states she has chronic cerebral ischemia and memory has worsened drastically. She reports Losing 100lbs recently and eats mostly vegetables. MRI Brain to r/o tumor and a MRA brain to rule out aneurysm.; This study is being ordered for a neurological disorder.; the last few months; There has not been any treatment or conservative therapy.; Head and hand are shaking, She reports forgetting long term events from her kids recollection. Headaches feel like Lightning bolt goes through her left temple and not frequent. Frequent falls and injuries from falls.

SHE STATES THAT SHE IS HAVING MORE TROUBLE WITH HER MEMORY THAT HER FAMILY IS BECOMING CONCERNED. SHE STATES THAT SHE WILL TELL THEM THE SAME STORY, CANNOT REMEMBER THAT SHE HAS TOLD THEM THAT. SHE REALLY FEELS THAT THINGS ARE GETTING WORSE WHEN SHE IS ST; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient is experiencing dizziness.

She was seen for the evaluation of dizziness and headache. The patient's main problem is she veers to the side when she walks. she will go to either side, more to the right than to the left, and she has been falling. She fell 3 times significantly in August; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

She's also had some hallucinations. She also reports periods of disorientation.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has a sudden change in mental status.; It is unknown why this study is being ordered.

Since she is having some paresthesias and it's been a year since her last MRI's, she wants to make sure nothing is going on with that and to continue to monitor her and to see her back after her studies.; This study is being ordered for Inflammatory/ Infectious Disease.; 12/3/2013; There has been treatment or conservative therapy.; She has had just a few twinges of pain over the summer. She also has had some irritaion when she is doing her arms and legs so she is mostly doing her hips and abdomen. She has occasionally paresthesias, but they are not lasting long.; Oxtellar and Copaxone 40 mg

SIX MONTH FOLLOW UP OF A MULTICYSTIC, VERY LARGE SUPRASELLAR AND RETROCHIASMATIC CRANIOPHARYNGIOMA.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Strong Family HX of Alzheimer's; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has not undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are not recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; Surgery is not planned within the next 4 weeks.; An operation for shunt placement (for brain fluid drainage) is not being considered or a non-metalic shunt is not functioning correctly.; The patient has a congenital abnormality.

SUDDEN ONSET HEADACHE FAMILY HISTORY OF ANNEURYSM; This study is being ordered for a neurological disorder.; 10/01/2015; There has been treatment or conservative therapy.; SUDDEN ONSET SEVERE HEADACHE  FAMILY HISTORY OF ANNEURYSM; MEDICATION

suspect cervical radiculopathy and carpal tunnel. The numbness in the left foot could be from lower lumbosacral radiculopathy or entrapment of the common peroneal nerve at the knee level; This study is being ordered for a neurological disorder.; one year ago; There has been treatment or conservative therapy.; Tingling in ring and pinkie finger on the left and tingling in her 4th, and 5th toes on her left foot. Chronic neck pain, Headaches 3-4 times per week all over her head and sensitive to light and noises .; Patient had Therapy for her neck pain and has been stopped since she started having worsening pain

THE DOCTOR WOULD LIKE TO REPEAT HIS MRI THAT WAS PERFORMED A YEAR AGO TO SEE IF THERE ARE ANY CHANGES AS IN WHITE MATTER CHANGES SINCE THE PT HAS KNOWN MULTIPLE SCLEROSIS.; This study is being ordered for a neurological disorder.; 2011; There has been treatment or conservative therapy.; BILATERAL LEG WEAKNESS AND NUMBNESS. HAVING EPISODES OF LEFT ARM DRAWING UP.; BETASERON, GABAPENTIN, TRAZADONE

The doctor would like to repeat the MRI scan to confirm this does not represent some other lesion besides an ischemic lesion, and when we do so she wants to do an MRA of her intracranial vessels.; This study is being ordered for Vascular Disease.; SEPTEMBER 2 2015; There has been treatment or conservative therapy.; DIZZINESS, DIFFICULTLY USING HER RIGHT HAND; CT MRI PLAVIX

the last 2 years the patient has reported bilateral occipital pain radiating in the front with a throbbing pulsating pain occurring about 10 days per month off which 5 days or severe. Associated symptoms include nausea, photophobia, phonophobia, osmophobi; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

the patient is having vertigo and migraines; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; the patient is having vertigo and migraines; There has not been any treatment or conservative therapy.; the patient is having vertigo and migraines

These are described as no show seizures.; This study is being ordered for a neurological disorder.; unknown; There has been treatment or conservative therapy.; Seizures associated with urinary incontinence and severe confusion lasting for several days.; patient has been taking Kepra for his seizures

This is a follow up of a known AVM; This study is being ordered for Congenital Anomaly.; December 2013; There has been treatment or conservative therapy.; Numbness in hands, impaired vision; Embolization in 2013. Microsurgical resection in 2014.

This is a follow up of a known left posterior temporal lobe astrocytoma. Patient underwent craniotomy.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

This is a yearly follow up. Patient had a very large acoustic neuroma which was resected in 2014. This MRI is to make sure there is no recurrence.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation). This request is for a Brain MRI; It is unknown if the study is being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has undergone treatment for multiple sclerosis.

This request is for a Brain MRI; It is unknown if the study is being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is described as a “thunderclap” or the worst headache of the patient’s life.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient had a thunderclap headache or worst headache of the patient's life (within the last 3 months).

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has one sided arm or leg weakness.; The patient has a sudden and severe headache.; The patient had a recent onset (within the last 3 months) of neurologic symptoms.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has the inability to speak.; The patient has a sudden and severe headache.; The patient had a recent onset (within the last 3 months) of neurologic symptoms.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; This headache is not described as sudden, severe or chronic recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is described as a “thunderclap” or the worst headache of the patient’s life.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has Bell's Palsy.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; It is unknown if the patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for Multiple Sclerosis.; This study is being ordered as a 12 month annual follow up.; The patient has new symptoms.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing dizziness.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing fatigue or malaise.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing vertigo

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient is experiencing vertigo

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested due to trauma or injury.; There are new, intermittent symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; The patient has a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.
This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has not undergone treatment for multiple sclerosis.; There are intermittent or new neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has undergone treatment for multiple sclerosis.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has been a previous Brain MRI completed.; The brain MRI was abnormal.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has one sided arm or leg weakness.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for Multiple Sclerosis.; The patient has new symptoms.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has one sided arm or leg weakness.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or TIA (transient ischemic attack).

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for and infection or inflammation.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for Multiple Sclerosis.; The patient is taking Tysabri (Natalizumab).

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for Multiple Sclerosis.; This study is being ordered as a 12 month annual follow up.; This is a routine follow up.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for seizures.; It is unknown if there has there been a change in seizure pattern or a new seizure.; This is a new patient.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for seizures.; There has been a change in seizure pattern or a new seizure.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for seizures.; There has NOT been a change in seizure pattern or a new seizure.; This is a new patient.

TIA or reversible ischemic neurologic deficit (RIND). He will need a CT Angiogram and MRI with and without contrast.; This study is being ordered for a neurological disorder.; In Early November; There has been treatment or conservative therapy.; Developed left facial numbness including the inside of his mouth on the left. No Sensation either internally or externally. Right hand numbness. Swallowing became difficult and he developed uncontrolled hiccoughs.; Aspirin a day

Tremors; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

unknown.; This study is being ordered for a neurological disorder.; 10/12/2015; It is not known if there has been any treatment or conservative therapy.; headache, weakness, lightheadedness, had TIA 5/2015, syncope, chronic fatigue, generalized pain, spells of change in awareness

unknown; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient does not have dizziness, one sided arm or leg weakness, the inability to speak, or vision changes.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for stroke or TIA (transient ischemic attack).

unknown; This study is being ordered for a neurological disorder.; Within the past 3 months; There has been treatment or conservative therapy.; nausea and photo phobia; Medications

With her age coupled with the vision changes, urinary frequency/Incontinence, and dizziness raises the possibility of a demyelinating process such as Multiple sclerosis. Given the Family history of brain aneurysm . will get Aneurysm screening.; This study is being ordered for a neurological disorder.; been ongoing for 2-3 years; It is not known if there has been any treatment or conservative therapy.; She has pain behind her right eye intermittently. this has been ongoing for 2-3 years and is often brought on by looking side to side. This is often associated with a tension type headache all over her head. She reports Nausea that occurs when she turns h

With sudden onset of headache like she describes aneurysm or other vascular abnormality must be ruled out.; This study is being ordered for a neurological disorder.; Acute onset of headache, aphasia, and left hemiparesis on 9/29/15; There has been treatment or conservative therapy.; Acute onset of headache on 9/29/15 with associated aphasia and left hemiparesis. Symptoms of aphasia and left hemiparesis have resolved but headache continues on the left side of her head radiating into the left side of the neck and upper chest; Treated with a 10 day course of prednisone, pain medications

worsening headaches coupled with dizziness and vertigo along with a secondary complaint of confusion; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.
WORSENING HEADACHES FOR 6 MONTHS WITH INCREASED FREQUENCY. PATIENT IS HAVING AT LEAST 2 HEADACHES PER WEEK.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

Yearly follow up to a colloid cyst-was last seen on 11-18-2014.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; It is not known if there are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient.;" A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.
< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

just that see ocular 385.00 myasthenia gravis; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for follow-up to trauma.; "The ordering physician is not a surgeon, pulmonologist, or cardiologist."; There is no radiologic evidence of mediastinal widening.; There is no physical or radiologic evidence of a chest wall abnormality.; This is a request for a chest MRI.

BRACHIAL PLEXOPATHY.; This study is NOT being ordered for a Work-up for Suspicious Mass, Known Tumor, Known or Suspected Inflammatory Disease, etc...; This is a request for a chest MRI.

EMG/NCV performed showed a right C5 radiculopathy and a lower trunk braichal plexopathy on the right.; This study is being ordered for a neurological disorder.; December 5, 2015; There has been treatment or conservative therapy.; complains of right shoulder and arm pain with weakness with neck pain.; Given Prednisone 10mg  and cyclobenzaprine 10mg. Home stretches were given and patient has had no change in symptoms

Plexoph headaches; This study is NOT being ordered for a Work-up for Suspicious Mass, Known Tumor, Known or Suspected Inflammatory Disease, etc...; This is a request for a chest MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; There is no reason why the patient cannot have a Cervical Spine MRI.

; This study is being ordered for a neurological disorder.; Mark was seen with Dr. Jay Hinkle, and I agree with Dr. Hinkle's assessment; as well as history, physical, and examination. In brief, Dr. Williams had diffuse weakness and ataxia, unknown cause. MRI scans do not show spinal cord very well; There has been treatment or conservative therapy.; Mark was seen with Dr. Jay Hinkle, and I agree with Dr. Hinkle's assessment; as well as history, physical, and examination. In brief, Dr. Williams had diffuse weakness and ataxia, unknown cause. MRI scans do not show spinal cord very well; He is not going to practice medicine anymore because of his health issues; but he would like to keep his license. I told him that I think it will be very difficult for him to practice medicine given all of his health problems, so I endorse his going o
This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT;
This study is being ordered due to neurological deficits.; The patient is experiencing or presenting symptoms of abnormal gait.; There is a reason why the patient cannot have a Cervical Spine MRI.

This study is to be part of a Myelogram.; This is a request for a Cervical Spine CT

; This study is being ordered for a neurological disorder.; Mark was seen with Dr. Jay Hinkle, and I agree with Dr. Hinkle's assessment; as well as history, physical, and examination. In brief, Dr. Williams had diffuse weakness and ataxia, unknown cause. MRI scans do not show spinal cord very well; There has been treatment or conservative therapy.; Mark was seen with Dr. Jay Hinkle, and I agree with Dr. Hinkle's assessment; as well as history, physical, and examination. In brief, Dr. Williams had diffuse weakness and ataxia, unknown cause. ; This study is being ordered for a neurological disorder.; 10-05-95; There has been treatment or conservative therapy.; extremity in weakness gait disturbance, numbness in extremity; medications

; This study is being ordered for a neurological disorder.; Here today for a follow up with her problems with Multiple Sclerosis. Recently started job working in kitchen and had to quit because she was unable to tolerate heat. Today she reports increased stress due to everyday life situations. Reports that left ; There has been treatment or conservative therapy.; Here today for a follow up with her problems with Multiple Sclerosis. Recently started job working in kitchen and had to quit because she was unable to tolerate heat. Today she reports increased stress due to everyday life situations. Reports that left ; 1. Multiple Sclerosis- relapsing remitting. Continue Copaxone. Explained MS exacerbation vs. psuedo exacerbation related to heat and stress, she is experiencing increased stress and heat intolerance which have made symptoms worse. She will wear cooling ve

; This study is being ordered for a neurological disorder.; Mr. Doss is a 60 yo Rt handed WM who presented to the clinic for f/u for MS. As per prior clinic note his initial complaints started with h/o R foot numbness in April 2013. " He went to the dentist for dental work and when he returned he had foot tingling; There has been treatment or conservative therapy.; Work up:  Per prior clinic note " CSF results not available but one document mentioning CSF postive for MS. MRI done without contrast as he did not tolerate it. 4/3/2013 : flair signal intensity 8 mm focus of increasd flair signal with left frontal corte;

; This study is being ordered for Inflammatory/ Infectious Disease.; 10-16-1995; There has been treatment or conservative therapy.; lower extremity spasticity; Botox injections

1- We need to evaluate for multiple sclerosis exacerbation while on copaxone
2- To check for any new multiple sclerosis lesions in the brain and spinal cord.
3- To decide about ongoing treatment for multiple sclerosis and the need to change her multiple; This study is being ordered for a neurological disorder.; May of 2015; There has been treatment or conservative therapy.; numbness in both legs , gait dysfunction, vibratory sensation along the entire spine.; Treated with copaxone for Multiple Sclerosis

AT THIS POINT AND TIME CERTAINLY WITH FASCICULATIONS AND WORSENING PARESTHESIAS IN THE UPPER AND LOWER EXTREMITY OF WHETHER OR NOT THE PROGRESSION OF HIS CERVICAL AND LUMBAR DISC DISEASE. HE DOES HAVE SOME WORSENING FASCICULATIONS. HE HAS HAD SOME COMPLEX RE; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2012; There has been treatment or conservative therapy.; NECK AND BACK PAIN WITH DIFFUSE HYPERREFLEXIA, WITH WORSENING PARESTHESIAS, FASCICULATION IN HIS UPPER AND LOWER EXTREMITIES. HE IS HAVING MORE DIFFICULTY GETTING AROUND, MORE DIFFICULTY WITH LUMBAR CLADICATION TYPE SYMPTOMS AND SO IT IS VERY DIFFICULT TO FIX; HE HAS HAD LAMINECTOMY AND LUMBAR AS WELL AS SHOULDER SURGERY. HE HAS ALSO BEEN ON LYRICA, CYMBALTA AND NEURONTIN.

Dr is trying to rule out MS. Pt is showing a great deal of symptoms leading to MS.; This study is being ordered for a neurological disorder.; 07/2015; There has been treatment or conservative therapy.; Pt is having numbness and visual field deficits.; Pt was given medications with no improvement or relief.

EMG/NCV performed showed a right C5 radiculopathy and a lower trunk brachial plexopathy on the right.; This study is being ordered for a neurological disorder.; December 5, 2015; There has been treatment or conservative therapy.; complains of right shoulder and arm pain with weakness with neck pain.; Given Prednisone 10mg and cyclobenzaprine 10mg. Home stretches were given and patient has had no change in symptoms

Enter answer here - Pt is a 44 year old woman who has bilateral numbness. she started with symptoms in February and said her Back kept Falling asleep. Then her left calf became cold. she then developed intermittent numbness and tingling below her knees an; This study is being ordered for a neurological disorder.; Enter date of initial onset here - started in 2/2015; There has been treatment or conservative therapy.; Describe primary symptoms here - Her Back kept falling asleep, then her left calf become cold. she has constant tingling and numbness in her toes, feet, legs, arms, and hands.; Describe treatment / conservative therapy Elavil 25 mg, she tried Gabapentin 600mg p.o q.d

Enter Symptoms have persistent for over a year and seem to be getting worse. The problems and always leaning toward the left are concerning as are the confusion. Need to rule out stroke, tumor, demyelinating process. for a cervical spine MRI to rule out c; This study is being ordered for a neurological disorder.; Enter date of initial onset here - a little over a year ago; It is not known if there has been any treatment or conservative therapy.; Describe primary symptoms here - difficulty finding words and remembering names. Episodes where she spaces out. neck hurts, she has shooting pain back down both arms that causes numbness and burning pain.

eval for demyelinating disease. mri of brain in sept revealed two contrast enhancing lesions. as well as non enhancing periventricular supratentorial lesions.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; july 13, 2015; It is not known if there has been any treatment or conservative therapy.; pt has numbness in legs hands and fingers, tingling sensation in right foot, above right knee

He feels weak for the past few days. He is still having pain in the left shoulder and medial upper arm. Slight left frontal HA now.; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; pain and weakness in the left upper and lower extremity. Pain with passive movement. possibly left sided decrease to PP and vibration; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

Here for follow up of MS. Started on Copaxone about 18 months ago and tolerating it well and overall feels better. Still with anterior t Schedule MRI brain, cervica/thoracic/lumbar spine in December (to be done in Hot Springs) for follow up of MS and de; This study is being ordered for a neurological disorder.; Patient was diagnosed with MS in 2012; There has been treatment or conservative therapy.; History:Bobby returns today for a follow up visit of his problems with multiple sclerosis. He reports new onset of bilateral leg soreness and weakness, history of back surgery last year. He has lost 40lbs recently on the paleo diet and has started working; Patient is on Copaxone 40 MG three times a weekly injection.

IMPRESSION: Pleasant 45 year old female with chronic daily headaches. Several elements point toward migraine. Will start low dose Topiramate and titrate up slowly to 25 twice a day. Will also concurrently start migraine diet modification. We will ord; This study is being ordered for a neurological disorder.; 10/04/2015; There has been treatment or conservative therapy.; IMPRESSION: Pleasant 45 year old female with chronic daily headaches. We will ord; IMPRESSION: Pleasant 45 year old female with chronic daily headaches. Several elements point toward migraine. Will start low dose Topiramate and titrate up slowly to 25 twice a day. Will also concurrently start migraine diet modification. We will ord

Mri brain 4/11/15 impression: small area of acute or subacute stroke, I believe in the right lenticular nucleus. Extensive white matter changes very suspicious for demyelinating plaques.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Three weeks ago; There has not been any treatment or conservative therapy.; weak on the left and now is weak on the right. was diagnosed with stroke. frequent migraine that is always in the left neck up the back of her head. she reports frequency of 2 headaches a month

MRI brain shows demyelinating process; This is a request for cervical spine MRI; There is no laboratory or x-ray evidence of osteomyelitis.; Known or Suspected Multiple Sclerosis, Infection or abscess; There is not laboratory or x-ray evidence of meningitis.; There is not laboratory or x-ray evidence of a paraspinal abscess.; There is not laboratory or x-ray evidence of an infected disc, septic arthritis, or "discitis".

MRI BRAIN W/O#x0D; Impression:#x0D; 1. Motion artifact limits image quality and interpretation.#x0D; 2. Several scattered supratentorial periventricular and subcortical white matter T2 FLAIR hyperintensities, several which are oriented perpendicular to the lateral ve; This study is being ordered for Inflammatory/ Infectious Disease.; 10/10/2015; There has been treatment or conservative therapy.; New issue - MRI brain reviewed and images show white matter changes. Several of these changes are oriented perpendicular to the lateral ventricle which is concerning for demyelinating disease. Will go ahead and check pertinent labs as well as a spinal c; TOPIRAMATE,CLONAZEPAM,VALIUM,LEVETIRACETAM#x0D; LABS DRAWN MRI Brian and spinal screening to rule out possible tumors involving the central nervous system; This study is being ordered for a neurological disorder.; 2014; There has not been any treatment or conservative therapy.; Headaches, she has had a left leg tumor since birth. mild thoracic pain

MS; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; unknown; There has been treatment or conservative therapy.; multiple sclerosis; medications, infusion

n.a; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2015; There has been treatment or conservative therapy.; weakness, speak slur; medications,

None; This study is being ordered for a neurological disorder.; 4/2015; There has been treatment or conservative therapy.; pt c/o loss of vision, back pain and stiffness, low extremity weakness.; RX

other neuro gave her a possible diagnosis of multiple sclerosis but never did any testing. 45-year-old lady with some clonus in the lower extremities. She's not overly spastic. Her knees and her arms are not hyperactive as well. There is no Hoffman re; This study is being ordered for a neurological disorder.; unknown; There has been treatment or conservative therapy.; 45-year-old lady presents with clonus. This apparently is in bilateral lower extremities. She reports the clonus in her ankles. She's had multiple head injuries in the past. She was in an abusive marriage and has been knocked unconscious several times.; patient has seen numerous doctors. pain specialists and other neuro doctors.; she has been placed on baclofen and other medications to help control her symptoms.

Patient had knee lesion on previous mri.; This study is being ordered for a neurological disorder.; Unknown; There has been treatment or conservative therapy.; Patient has MS. Follow up; Patient is taking medications as well as message therapy.

Patient with complete loss of all sensory modalities from the head to the toe which is non-physiologic with normal exam otherwise. She relates that she has had some questionable history of neurologic abnormality whether or not she had mild Arnold-Chiari. C; This study is being ordered for a neurological disorder.; 12/01/2000; There has been treatment or conservative therapy.; Pt states she began having seizures with episodes of passing out, jerking, apparently she felt that those episodes were triggered by stress. She has numbness that goes over all her body. She feels like she has lost sensation completely of her entire body.; Keppra, Meloxicam, Oxycodon, CT, Pt has a family h/x of Huntington's disease; This study is being ordered for a neurological disorder.; 1996; There has been treatment or conservative therapy.; horrible neck, back and feet pain, muscles in neck are cramping, numbness and tingling in hands.; medication, neck surgery (2 years ago)
Pt has known MS; This study is being ordered for a neurological disorder.; 10-2014; There has been treatment or conservative therapy.; Pt has increased numbness and blurred vision; Pt is on Tysabri (medication)

rapidly progressive weakness with paresthesia. Distal weakness with loss of reflexes.; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.; rapidly progressive weakness with paresthesia. Distal weakness with loss of reflexes.

Right leg sensory, motor, and reflex changes with left foot vibratory sensory loss suggest spinal cord involvement.; This study is being ordered for a neurological disorder.; Mrs. Bunch is seen in consultation to Dr. Young regarding problems with right leg motor and sensory function. This has been slowly progressive over some years time but has been particularly problematic this year. She remembers suffering an ankle sprain ; There has been treatment or conservative therapy.; There is altered sensation from about the knee on the right with hypersensitivity and discomfort particularly in the foot. There is an aching sensation from the knee down. Mrs. Bunch notes difficulty maneuvering the right foot and has unusual gait. Th; Medication Name#x0D; Sig Desc#x0D; Start Date#x0D; Stop Date#x0D; Refilled#x0D; Elsewhere#x0D; Aleve 220 mg tablet#x0D; take 1 tablet by oral route every 12 hours as needed#x0D; 08/31/2015#x0D;   N

Rule out central nervous disorder and cervical myelopathy.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; March 2015; It is not known if there has been any treatment or conservative therapy.; Tremor bil legs for 6 months increased with standing. Left foot numbness and the right fingers numb and tingling. Muscles spasms and right trunk It triceps. Hyperflexia diffuse right greater than left.

Since she is having some paresthesias and it's been a year since her last MRI's, she wants to make sure nothing is going on with that and to continue to monitor her and to see her back after her studies.; This study is being ordered for Inflammatory/ Infectious Disease.; 12/3/2013; There has been treatment or conservative therapy.; She has had just a few twinges of pain over the summer. She also has had some irritaion when she is doing her arms and legs so she is mostly doing her hips and abdomen. She has occasionally paresthesias, but they are not lasting long.; Oxtellar and Copaxone 40 mg

suspect cervical radiculopathy and carpal tunnel. The numbness in the left foot could be from lower lumbosacral radiculopathy or entrapment of the common peroneal nerve at the knee level; This study is being ordered for a neurological disorder.; one year ago; There has been treatment or conservative therapy.; Tingling in ring and pinkie finger on the left and tingling in her 4th, and 5th toes on her left foot. Chronic neck pain, Headaches 3-4 times per week all over her head and sensitive to light and noises .; Patient had Therapy for her neck pain and has been stopped since she started having worsening pain

THE DOCTOR WOULD LIKE TO REPEAT HIS MRI THAT WAS PERFORMED A YEAR AGO TO SEE IF THERE ARE ANY CHANGES AS IN WHITE MATTER CHANGES SINCE THE PT HAS KNOWN MULTIPLE SCLEROSIS.; This study is being ordered for a neurological disorder.; 2011; There has been treatment or conservative therapy.; BILATERAL LEG WEAKNESS AND NUMBNESS. HAVING EPISODES OF LEFT ARM DRAWING UP.; BETASERON, GABAPENTIN, TRAZADONE

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has not failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; It is not known if this patient had a recent course of supervised physical Therapy.; No, the patient did not have six weeks of Chiropractic care related to this episode.;

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; Follow-up to Surgery or Fracture within the last 6 months; The patient has been seen by or is the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist.

This is a request for cervical spine MRI; Known or Suspected Multiple Sclerosis, Infection or abscess; ; No, the patient does not have new or changing neurological signs or symptoms.; yes, there are documented clinical findings of Multiple sclerosis.

This is a request for cervical spine MRI; Known or Suspected Multiple Sclerosis, Infection or abscess; Yes, the patient have new or changing neurological signs or symptoms.; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; Yes, the patient is experiencing or presenting new symptoms of Bowel or bladder dysfunction.; yes, there are documented clinical findings of Multiple sclerosis.

This is a request for cervical spine MRI; Known or Suspected Multiple Sclerosis, Infection or abscess; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.; yes, there are documented clinical findings of Multiple sclerosis.

This is a request for cervical spine MRI; Neurological deficits; ; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; Yes, the patient is experiencing new onset of parathesia diagnosed by a neurologist.; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; Neurological deficits; Clinical questions bypassed.; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; Neurological deficits; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; Yes, the patient is experiencing or presenting new symptoms of Bowel or bladder dysfunction.

This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; None of the above; &Enter Additional Clinical Information>; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; Yes, the patient is experiencing new onset of parathesia diagnosed by a neurologist.; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; None of the above; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; abnormal vertibray, neck pain radiating to shoulders

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; pain and Paraesthesia

This is a request for cervical spine MRI; Trauma or recent injury; IMPRESSION: Very nice, very appreciative 29 year old female who may be having degrees of spasticity/spasming in her upper and lower limbs. Her reflexes are hyperactive so one wonders about a myelopathy. She was in a bad car accident in 2009 with a whip; Yes, the patient have new or changing neurological signs or symptoms.; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; Trauma or recent injury; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

Unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has not been any treatment or conservative therapy.; Brisk reflexes suggest a possible myelopathy-compressive. This is follow-up MRI for Lumbar

UNKOWN; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 8 WEEKS; There has been treatment or conservative therapy.; SHOULDER PAIN AND WEAKNESS; MEDICATION WAS GIVEN

With her age coupled with the vision changes, urinary frequency/Incontinence, and dizziness raises the possibility of a demyelinating process such as Multiple sclerosis. Given the Family history of brain aneurysm . will get Aneurysm screening.; This study is being ordered for a neurological disorder.; been ongoing for 2-3 years; It is not known if there has been any treatment or conservative therapy.; She has pain behind her right eye intermittently. this has been ongoing for 2-3 years and is often brought on by looking side to side. This is often associated with a tension type headache all over her head. She reports Nausea that occurs when she turns h

There are no documented clinical findings of immune system suppression.; This is a request for a thoracic spine MRI.; The patient is not experiencing back pain associated with abdominal pain.; The caller indicated the the study was not ordered for: Chronic Back pain, Trauma, Known or suspected tumor with or without metastasis, Follow up to or Pre-operative evaluation, or Neurological deficits."; Patient has known Multiple Sclerosis. This MRI is to evaluate for changes or new lesions.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >;

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 08/27/15; There has not been any treatment or conservative therapy.; numbness  bowel incontinence

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 09/04/2015; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; At Home exercise program with no relief

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 2009; There has been treatment or conservative therapy.; mbr blurred vision weakness gait disturbance; medication

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >;
; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

; This study is being ordered for a neurological disorder.; 09/21/2015; There has been treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; 10/23/2015; There has been treatment or conservative therapy.;

; This study is being ordered for a neurological disorder.; a few weeks prior to 11/03/15; It is not known if there has been any treatment or conservative therapy.;
History of Present Illness:  49yo RH lady here for follow up of above, receiving botox injections for chronic migraine and doing well with these, has decreased her overall headache days significantly, no change in location/severity, remains predominatel

; This study is being ordered for a neurological disorder.; Here today for a follow up with her problems with Multiple Sclerosis. Recently started job working in kitchen and had to quit because she was unable to tolerate heat. Today she reports increased stress due to everyday life situations. Reports that left ; There has been treatment or conservative therapy.; Here today for a follow up with her problems with Multiple Sclerosis. Recently started job working in kitchen and had to quit because she was unable to tolerate heat. Today she reports increased stress due to everyday life situations. Reports that left ; 1. Multiple Sclerosis- relapsing remitting. Continue Copaxone. Explained MS exacerbation vs. psuedo exacerbation related to heat and stress, she is experiencing increased stress and heat intolerance which have made symptoms worse. She will wear cooling ve

; This study is being ordered for Inflammatory/ Infectious Disease.; 10-16-1995; There has been treatment or conservative therapy.; lower extremity spasticity; Botox injections

1- We need to evaluate for multiple sclerosis exacerbation while on copaxone
2- To check for any new multiple sclerosis lesions in the brain and spinal cord.
3- To decide about ongoing treatment for multiple sclerosis and the need to change her multiple;
This study is being ordered for a neurological disorder.; May of 2015; There has been treatment or conservative therapy.; numbness in both legs , gait dysfunction, vibratory sensation along the entire spine.; Treated with copaxone for Multiple Sclerosis

Dr is trying to r/o MS. Pt is showing a great deal of symptoms leading to MS.; This study is being ordered for a neurological disorder.; 07/2015; There has been treatment or conservative therapy.; Pt is having numbness and visual field deficits.; Pt was given medications with no improvement or relief.

eval for demyelinating disease. mri of brain in sept revealed two contrast enhancing lesions. as well as non enhancing periventricular supratentorial lesions.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; july 13, 2015; It is not known if there has been any treatment or conservative therapy.; pt has numbness in legs hands and fingers, tingling sensation in right foot, above right knee

Here for follow up of MS. Started on Copaxone about 18 months ago and tolerating it well and overall feels better. Still with anterior t Schedule MRI brain, cervica/thoracic/lumbar spine in December (to be done in Hot Springs) for follow up of MS and de; This study is being ordered for a neurological disorder.; Patient was diagnosed with MS in 2012; There has been treatment or conservative therapy.; History:Bobby returns today for a follow up visit of his problems with multiple sclerosis. He reports new onset of bilateral leg soreness and weakness, history of back surgery last year. He has lost 40lbs recently on the paleo diet and has started working; Patient is on Copaxone 40 MG three times a weekly injection.

Mri brain 4/11/15 impression: small area of acute or subacute stroke, I believe in the right lenticular nucleus. Extensive white matter changes very suspicious for demyelinating plaques.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Three weeks ago; There has not been any treatment or conservative therapy.; weak on the left and now is weak on the right. was diagnosed with stroke. frequent migraine that is always in the left neck up the back of her head. she reports frequency of 2 headaches a month

MRI BRAIN W/O; Impression: 1. Motion artifact limits image quality and interpretation. 2. Several scattered supratentorial periventricular and subcortical white matter T2 FLAIR hyperintensities, several which are oriented perpendicular to the lateral ve; This study is being ordered for Inflammatory/ Infectious Disease.; 10/10/2015; There has been treatment or conservative therapy.; New issue - MRI brain reviewed and images show white matter changes. Several of these changes are oriented perpendicular to the lateral ventricle which is concerning for demyelinating disease. Will go ahead and check pertinent labs as well as a spinal c; TOPIRAMATE, CLONAZEPAM, VALIUM, LEVETIRACETAM; LABS DRAWN MRI Brian and spinal screening to rule out possible tumors involving the central nervous system; This study is being ordered for a neurological disorder.; 2014; There has not been any treatment or conservative therapy.; Headaches, she has had a left leg tumor since birth. mild thoracic pain need to rule out myeloiitis.; This study is being ordered for a neurological disorder.; Diagnosed with MS in 2006; Back and right sided weakness & started May 21 2015; There has been treatment or conservative therapy.; MS with right sided weakness and thoracic back pain; patient has been given Flexeril, diclofenac and had nerve blocks with pain management None; This study is being ordered for a neurological disorder.; 4/2015; There has been treatment or conservative therapy.; pt c/o loss of vision, back pain and stiffness, low extremity weakness.; RX Pt has a family h/x of Huntington's disease; This study is being ordered for a neurological disorder.; 1996; There has been treatment or conservative therapy.; horrible neck, back and feet pain, muscles in neck are cramping, numbness and tingling in hands.; medication, neck surgery (2 years ago) Pt has known MS; This study is being ordered for a neurological disorder.; 10-2014; There has been treatment or conservative therapy.; Pt has increased numbness and blurred vision; Pt is on Tysabri (medication)

RADIOLOGIST SUGGEST CT OR MRI OF THORACIC SPINE TO CONFIRM.QUESTIONABLE HEIGHT LOSS T3 VERTEBRA SEEN ON FRONTAL VIEW,POORLY EVALUATED ON LATERAL PROJECTION,PT WITH KNOWN TRAUMA,SUGGEST CT OR MRI.; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.; LOW BACK PAIN,LEGS CRAMPING,FRACTURE OF T SPINE AT T1-T3 LEVEL; HAS HAD 6 WEEKS OF PHYSICAL THERAPY,ASA WITHOUT IMPROVEMENT

Right leg sensory, motor, and reflex changes with left foot vibratory sensory loss suggest spinal cord involvement..; This study is being ordered for a neurological disorder.; Mrs. Bunch is seen in consultation to Dr. Young regarding problems with right leg motor and sensory function. This has been slowly progressive over some years time but has been particularly problematic this year. She remembers suffering an ankle sprain ; There has been treatment or conservative therapy.; There is altered sensation from about the knee on the right with hypersensitivity and discomfort particularly in the foot. There is an aching sensation from the knee down. Mrs. Bunch notes difficulty maneuvering the right foot and has unusual gait. Th; Medication Name Sig Desc Start Date Stop Date Refilled Elsewhere Aleve 220 mg tablet take 1 tablet by oral route every 12 hours as needed 08/31/2015   N

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; ; The patient is experiencing or presenting symptoms of lower extremity weakness documented on physical exam.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing or presenting symptoms of abnormal gait.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing or presenting symptoms of radiculopathy documented on EMG or nerve conduction study.

The patient does not have any neurological deficits.; This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.

The patient has not failed a course of anti-inflammatory medication or steroids.; This is a request for a thoracic spine MRI.; There has not been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to Neurological deficits.; The patient is experiencing sensory abnormalities such as numbness or tingling.; This is a 20-year-old Caucasian female who was referred to neurology by Dr. treece for evaluation of abnormal MRI finding in the brain. she presented with significant worsening of headaches in the last a year, consistent with migraine flaring/status. For ; The patient is not experiencing or presenting symptoms of abnormal gait, lower extremity weakness, asymmetric reflexes, fracture, radiculopathy or bowel or bladder dysfunction.

This is a request for a thoracic spine MRI.; The study is being ordered due to Neurological deficits.; The patient is experiencing or presenting symptoms of abnormal gait.

This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to Neurological deficits.; The patient is experiencing sensory abnormalities such as numbness or tingling.; The patient is not experiencing or presenting symptoms of abnormal gait, lower extremity weakness, asymmetric reflexes, fracture, radiculopathy or bowel or bladder dysfunction.

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 08/27/15; There has not been any treatment or conservative therapy.; numbness  bowel incontinence

MRI BRAIN W/O; Impression: 1. Motion artifact limits image quality and interpretation. 2. Several scattered supratentorial periventricular and subcortical white matter T2 FLAIR hyperintensities, several which are oriented perpendicular to the lateral ve; This study is being ordered for Inflammatory/ Infectious Disease.; 10/10/2015; There has been treatment or conservative therapy.; New issue - MRI brain reviewed and images show white matter changes. Several of these changes are oriented perpendicular to the lateral ventricle which is concerning for demyelinating disease. Will go ahead and check pertinent labs as well as a spinal c; TOPIRAMATE, CLONAZEPAM, VALIUM, LEVETIRACETAM; LABS DRAWN MRI Brian and spinal screening to rule out possible tumors involving the central nervous system; This study is being ordered for a neurological disorder.; 2014; There has not been any treatment or conservative therapy.; Headaches, she has had a left leg tumor since birth. mild thoracic pain

numbness of her body, tingling in arms and hands, chronic pain; This study is being ordered for Vascular Disease.; 11-18-2015; There has been treatment or conservative therapy.; numbness of upper limb chronic neck pain; unknown

Patient continues to have right thigh weakness, atrophy, paresthesia, pain and spasms and right low back pain as well as severe neck pain. We want to obtain a repeat MRI of the lumbosacral spine to better evaluate the degree of possible underlying lumbosa; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 07/2015; There has not been any treatment or conservative therapy.; Low back pain and neck pain, atrophy, paresthesia Pt has a family h/x of Huntington's disease; This study is being ordered for a neurological disorder.; 1996; There has been treatment or conservative therapy.; horrible neck, back and feet pain, muscles in neck are cramping, numbness and tingling in hands.; medication, neck surgery (2 years ago)

RADIOLOGIST SUGGEST CT OR MRI OF THORACIC SPINE TO CONFIRM.QUESTIONABLE HEIGHT LOSS T3 VERTEBRA SEEN ON FRONTAL VIEW,POORLY EVALUATED ON LATERAL PROJECTION,PT WITH KNOWN TRAUMA,SUGGEST CT OR MRI.; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.; LOW BACK PAIN,LEGS CRAMPING,FRACTURE OF T SPINE AT T1-T3 LEVEL; HAS HAD 6 WEEKS OF PHYSICAL THERAPY,ASA WITHOUT IMPROVEMENT

REPEAT MRI OF BRAIN BECAUSE HAS MANY ISSUES AND THINK MEDICATION MAY BE ISSUES WANTS KEPRA FOR HEADACHES. HYPONATREMIA; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 1/8/2006; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; MEDICATION NERVE CONDUCTION STUDY

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; The patient has Neurological abnormalities; This procedure is being requested for Trauma or recent injury

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Neurologic deficits

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal nerve study involving the lumbar spine

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has completed Treatment with a facet joint or epidural injection in the past 6 weeks

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

Unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has not been any treatment or conservative therapy.; Brisk reflexes suggest a possible myelopathy-compressive. This is follow-up MRI for Lumbar

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/1/2015; There has not been any treatment or conservative therapy.; pain, ulcercolits , tender to the touch & tested positive for a tb test LUMBOSACRAL PLEXUS; This is a request for a Pelvis MRI.; The study is being ordered for something other than suspicion of tumor, mass, neoplasm, metastatic disease, PID, abscess, Evaluation of the pelvis prior to surgery or laparoscopy, Suspicion of joint or bone infect

WE WILL DO MRI'S OF THE HIP AND PELVIS AND CERTAINLY EVALUTAE THAT FURTER.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10.1.15; There has been treatment or conservative therapy.; COMPLAINING OF HIS BACK HURTING, HE IS CONVINCED THAT HE HAS PIRIFORMIDS AND IT CERTANILY MAB BE POSSIBLE THAT SOME FACET HUPERTORPHY. THE INJECTION, THE LESI, SEEMS TO BE HLEPING, L IT IS CERTAINLY POSSIBLE THAT HERE IS SOME DEFREE OF PIRIFORMIS SYNDROME; MRI, LESI, PHYSICAL THERAPY AND ACUPUNCTURE

The request is for an upper extremity non-joint MRI.; This is a preoperative or recent postoperative evaluation.

UNKOWN; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 8 WEEKS; There has been treatment or conservative therapy.; SHOULDER PAIN AND WEAKNESS; MEDICATION WAS GIVEN Cyst on Previous MRI; This is a request for a Knee MRI.; No, the patient did not have a recent ultrasound of the knee.; The patient has not had recent plain films of the knee.; There are no physical findings (palpabel mass) of a suspicious mass or known primary site of cancer.; The patient has not had a recent bone scan.; Suspicious Mass or Suspected Tumor/ Metastasis

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.

This is a request for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has a documented limitation of their range of motion.

WE WILL DO MRI'S OF THE HIP AND PELVIS AND CERTAINLY EVALUATE THAT FURTHER.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10.1.15; There has been treatment or conservative therapy.; COMPLAINING OF HIS BACK HURTING, HE IS CONVINCED THAT HE HAS PIRIFORMIDS AND IT CERTAINLY MAY BE POSSIBLE THAT SOME FACET HYPERTROPHY. THE INJECTION, THE LESION, SEEMS TO BE HELPING, BUT IT IS CERTAINLY POSSIBLE THAT THERE IS SOME DEGREE OF PIRIFORMIS SYNDROME; MRI, LESION, PHYSICAL THERAPY AND ACUPUNCTURE

Abnormal Brain MRI on 12/2/2015 that showed a stroke, R/O malignancy, vasculitis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/2/2015; There has been treatment or conservative therapy.; bladder incontinence, ABD pain/tenderness, heavy bleeding.; antibiotics for urinary issue, daily aspirin

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; pt is unable to extend his leg and has had several falls that are unexplained. EMG suggests Lumbosacral plexopathy. Pt is experiencing right numbness, weakness and pain.

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; <Enter Additional Clinical Information>

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/1/2015; There has not been any treatment or conservative therapy.; pain, ulcercolits , tender to the touch & tested positive for a tb test Yes, this is a request for CT Angiography of the abdominal arteries.

Alzheimer's dementia, frontotemporal dementia.; This is a request for a Metabolic Brain PET scan; This study is being ordered for Alzheimer's disease.

This is a request for a Metabolic Brain PET scan; This study is being ordered for refractory seizures.; This study is being ordered for pre-surgical evaluation.

Patient of 53 yo rh male. n 7/15/15 episode of feeling rare, like all his body was numb, slurred speech. He understood everything on his around. His laertness was normal. Weakness that started on his left hemibody and spread all over. In the ER he was tol; This study is being ordered for a neurological disorder.; Patient of 53 yo rh male. n 7/15/15 episode of feeling rare, like all his body was numb, slurred speech. He understood everything on his around. His laertness was normal. Weakness that started on his left hemibody and spread all over. In the ER he was tol; There has been treatment or conservative therapy.; Patient of 53 yo rh male. n 7/15/15 episode of feeling rare, like all his body was numb, slurred speech. He understood everything on his around. His laertness was normal. Weakness that started on his left hemibody and spread all over. In the ER he was tol; Brain MRI done in 9/29 is reported as normal, no stroke. he was started on Plavix and Atorvastain.

None; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were normal.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

Radiology Services Denied Not Medically Necessary

Ovarian cyst; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were abnormal.

Radiology Services Denied Not Medically Necessary

status post total abdominal historectomy, severe endometriosis; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; <Enter Additional Clinical Information>

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; uterine pain and abnormal bleeding, previous imaging (ultrasound) was inconclusive, had known fibroids and polyps, CT recommended for further evaluation

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement

Radiology Services Denied Not Medically Necessary

This is a request for a Heart CT.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There are NOT benign lesions in the breast associated with an increased cancer risk.; There is NOT a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

Radiology Services Denied Not Medically Necessary

will fax clinical info; This is a request for Breast MRI.; This study is being ordered for something other than known breast cancer, known breast lesions, screening for known family history, screening following genetic testing or a suspected implant rupture.

This is a request for a thoracic spine MRI.; The study is being ordered due to Neurological deficits.; The patient is experiencing or presenting symptoms of abnormal gait.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The requested study is a Shoulder MRI.; This study is being ordered for Known Tumor.; The ordering physician is not an oncologist or orthopedist.; The patient is presenting new symptoms.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.

This is a request for an abdomen-pelvis CT combination.; The hematuria is due to Renal Calculi/kidney/ ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.

INJURY 2 YRS AGO, A COUPLE DAYS AGO SHE BENT OVER AND NOW PAIN IS RADIATING DOWN RIGHT SIDE TO TOES; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

Tingling in LE degenerative changes; The study requested is a Lumbar Spine MRI.; None of the above; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

Evaluation of patient with Uterus Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; This study is being ordered for evaluation of known tumor.

evaluation of patient with lung mass 4.2cm; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI. This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for a tumor.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Uterus Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

Evaluation of patient with worsening SOB.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

evaluation of pt with malignant neoplasm of adrenal gland; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

none; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

none; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

none; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

none; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Uterus Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluation of pt with malignant neoplasm of adrenal gland; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

none; This study is being ordered for a metastatic disease.; There are 5 or more exams are being ordered.

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; This study is being ordered for follow-up.; The patient is presenting new signs or symptoms.; The patient did NOT have chemotherapy, radiation therapy or surgery in the last 3 months.; They had an Abdomen MRI in the last 10 months.

Patient states had a yearly mammogram on 9-2-15. She denies palpating a lump, pain, nipple discharge or skin dimpling. MG was done at St Vincent In Little Rock,AR. She then had a needle core biopsy at St. Vincents Breast Center on 9-3-15. Pathology rev; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; It is not known if this is an individual who has known breast cancer in the contralateral (other) breast.

This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There are benign lesions in the breast associated with an increased cancer risk.; There is NOT a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

Evaluation of patient with Lung Cancer.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

evaluation of patient with lung mass 4.2cm; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Evaluation of patient with Uterus Cancer.; This study is being ordered for a metastatic disease.; There are 4 exams are being ordered.

evaluation of pt with malignant neoplasm of adrenal gland; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a Tumor Imaging PET Scan; A nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; The solitary pulmonary nodule was identified on an imaging study in the last 30 days.; This study is being requested for Lung Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; The patient does NOT have Thyroid or Brain cancer.; 2 PET Scans have already been performed on this patient for this cancer.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; unknown; There has been treatment or conservative therapy.; Light sensitivity, worsening headaches with no relief, left optic Neuropathy, PS do pathaladema; pain medications

unknown; This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

"This request is for orbit,sella, int. auditory canal,temporal bone, mastoid, CT.239.8";
"There is suspicion of bone infection, cholesteoma, or inflammatory disease.ostct"

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; unknown; There has been treatment or conservative therapy.; Light sensitivity, worsening headaches with no relief, left optic Neuropathy, PS do pathaladema; pain medications

"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is not a suspicion of neoplasm, tumor or metastasis.fct"; "There is not a suspicion of bone infection, [osteomyelitis].fct"; This is a preoperative or recent postoperative evaluation.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 10/13/2015; There has been treatment or conservative therapy.; THE MEMBER HAD BLURRED VISSION IN THE BOTTOM 1/2 OF THERE LEFT EYE; THE MEMBER BLOOD WR ORDERED THE MEMBER TOO SEE PCP & THIS MRI ORDERED

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; There has not been any treatment or conservative therapy.; vision defects

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/6/15; There has not been any treatment or conservative therapy.; Patient cant get vision corrected pass 20/70

esotropia/graves disease/diplopia/history of thyroid dysfunction; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2 years ago; There has been treatment or conservative therapy.; esotropia/diplopia history of thyroid dysfunction; Treated with prism glasses in past

MD wants to rule out pseudo tumor; This study is being ordered for Vascular Disease.; 10/9/2015; There has not been any treatment or conservative therapy.; visual disturbances in the right eye, elevated BP, mild headaches

none; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/14/2015; There has not been any treatment or conservative therapy.; Diabetic with vision changes

Observation; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 12/1/2015; There has not been any treatment or conservative therapy.; Floaters and flashes in both eyes, mild leakage in the right eye

patient has swelling of optic nerves; This study is being ordered for Inflammatory/ Infectious Disease.; 10/16/2015; There has not been any treatment or conservative therapy.; blurry vision and headaches

R/O tumor or optic nerve mass.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

There is not a suspicion of an infection or abscess.; This examination is being requested to evaluate lymphadenopathy or mass.; This is a request for an Orbit MRI.; There is not a history of orbit or face trauma or injury.

unexplained vision loss both eyes; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Patient states vision decrease started two years ago. Visual field study performed and shows bilateral field constriction.; There has not been any treatment or conservative therapy.; vision decrease migraine headaches

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Since childhood-gradually gotten worse in the last 5-6 years.; There has been treatment or conservative therapy.; Intermittent double vision; eyes not working together; Tried prism glasses for short time but did not help

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 2 weeks ago; There has not been any treatment or conservative therapy.; migraines with aura . Transient visual obscurations

R/O Aneurysm and R/O BRAIN Tumor; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is not described as a “thunderclap” or the worst headache of the patient’s life.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is a preoperative or recent post-operative evaluation.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is experiencing symptoms of radiculopathy for six weeks or more.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is to be part of a myelogram or discogram.

This is a request for a lumbar spine CT.; The patient has a history of severe low back trauma or lumbar injury.

to evaluate for fracture after surgery; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has been treatment or conservative therapy.; severe pain of the left leg; pt has undergone surgery and is now having pain

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; right shoulder weakness; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 09/04/2015; There has been treatment or conservative therapy.; l/shoulder pain, stiffness, decreased ROM; anti-inflammatories; HEP begin date 9/4/2015 - ongoing

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; Posotive Spurlings 09/24/2014; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; Pt has had epidural steroid injections, and NSaid therapy, also pt has been doing a Home exercise program started in 09/24/2015 ; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness with leifting arms and numbness and tingling down right upper extremity. Physical therapy has not helped at all.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; ; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Physical exam of her cervical spine reveals pain with flexion of her cervical spine. She also has pain with extension and approximately 50% of her normal extension. Lateral rotation to the right recreates her right upper extremity numbness and tingling. H; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

blurred vision tingling sensation in arms and hands cannot twist head mobility issues rule out a brain bleed; This study is being ordered for trauma or injury.; 11/26/2015; There has been treatment or conservative therapy.; headache severe neck pain arm weakness and numbness bilateral arms; medication - Norco and physical therapy -

Cervical spondylosis and impingement syndrome to the left shoulder. Neck and shoulder pain. Meds and physical therapy have not helped.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has been treatment or conservative therapy.; Left neck and shoulder pain with some pain to the left arm.; anti-inflammatories, physical therapy

CONTINUED EVALUATION; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has not been any treatment or conservative therapy.; NEUROMUSCULAR SCOLIOSIS, KLIPPEL-FEIL SYNDROME, CERVICAL STENOSIS, KAWASAKI DISEASE, INCREASE IN DEXTRSCOLIOSIS OF THE THORACIC SPINE AND LEVOSCOLIOSIS OF THE LUMBAR SPINE.

EMG and nerve study done of his upper extremities and lower extremities and the reports was there was denervation findings on EMG in the bilateral upper extremities especially triceps muscle were also fasciculations were seen. The there was bilateral C7 r; This study is being ordered for a neurological disorder.; Unknown; There has been treatment or conservative therapy.; Paresthesias in both thighs, coughing and sneezing cause back pain,; Anti-inflammatories, Flexeril, chiropractic care, rest, activity modification.

Enter answer here - or Type A lot of her symptoms sounds like neuropathy. She has tried conservative treatment for over two months, which has failed and she is worse than before. She has stocking and glove type distribution of the sensory deficits on the ; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness, numbness and tingling with bilateral upper extremities. trouble grasping objects of any kind. positive Tinel's all over arm and positive Spurling maneuver. No signs of carpal tunnel from EMG.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

He has about 50% normal cervical rotation with active cervical extension. He relates tingling in his left arm from shoulder to thumb. No motor weakness on manual testing. Circulation is fine. X-rays show moderate disc degeneration with spurring at C3-4 and; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

PATIENT HAS FAILED NUMEROUS CONSERVATIVE METHODS, INCLUDING MEDICATION, RESTING AND CHANGE IN ACTIVITY WITH NO RELIEF. PATIENT HAS DDD AND RADICULOPATHY.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; PATIENT HAS HAD PAIN FOR THE PAST 12 WEEKS WITHOUT RELIEF; There has been treatment or conservative therapy.; PAIN IN SHOULDER, NECK AND BACK, BOTH SIDES. PATIENT ALSO HAS RADICULOPATHY. PATIENT HAS TROUBLE SLEEPING AT NIGHT AND LAYING ON EITHER SIDE.; PATIENT HAS HAD CHANGE IN ACTIVITY BECAUSE HE HAS TROUBLE SITTING AND STANDING. HE HAS USED REST AND TRACTION, AND ALSO MEDICATIONS WITHOUT RELIEF

Patient has numbness, burning, tingling and pain in arms and legs, hands and feet, bilaterally. Progressively worsening.; This study is being ordered for a neurological disorder.; Patient has had pain in her neck and lower back, hands and feet for some time. It is progressively worsening. It has been going on for at least 10 years; There has been treatment or conservative therapy.; Numbness, tingling, burning, pain in hands and feet, arms and legs, bilaterally; Patient has been given anti-inflammatory drugs, pain medication and nerve pain medications. She has been recently been given a script for PT for core strengthening, which she will start ASAP

Patient presented to the clinic for evaluation of diffuse cervical and lumbar spine pain. Reports falling 20 feet off of a ladder in 2008. Patient was diagnosed with a lumbar vertebral fracture in 2009 and reports continued pain in his arms and legs, numb; This study is being ordered for a neurological disorder.; 2008; There has been treatment or conservative therapy.; Patient presented to the clinic for evaluation of diffuse cervical and lumbar spine pain. Reports falling 20 feet off of a ladder in 2008. Patient was diagnosed with a lumbar vertebral fracture in 2009 and reports continued pain in his arms and legs, numb; Physical Therapy which patient was unable to tolerate due to pain symptoms.

-persistent pain and not responding to conservative tx; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 01/01/2010; There has been treatment or conservative therapy.; - ongoing lo back pain numbness and tingling as well. 8-10/10; - Neck pain radiates to bilateral shoulders, numbness and tingling. 8-10/10; - PT both L and C spine 10/01/2015; - Cyclobenzaprine and Prednisone

PHYSICIAN WANTS TO RULE OUT AC JOINT ARTHRITIS. PATIENT IS IN SEVERE PAIN, HAS HAD CHANGE IN ACTIVITY, HAS USED NSAIDS AND CAN BARELY LIFT HER HANDS.; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if there is x-ray evidence of a recent cervical spine fracture.; PATIENT HAS TINGLING IN LEFT ARM AND HAND, PAIN WITH OVERHEAD MOVEMENT, HURTS TO LAY ON IT.

possible candidate for epidural injections to both areas; xrays show no fractures; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 7/25/2015; There has been treatment or conservative therapy.; severe neck pain that radiates down both shoulder; difficulty with turning head side to side; limited range of motion; severe low back pain that radiates down to both legs; difficulty laying flat; painful bending over; Physical Therapy; Medication; Xrays were done PREOPERATIVE WORK FOR SPINE SURGERY; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/9/2015; There has been treatment or conservative therapy.; Scoliosis; Physical therapy and medications

PRE-OPERATIVE; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/2014; There has not been any treatment or conservative therapy.; PROGRESSIVE NEUROMUSCULAR THORACOLUMBAR SCOLIOSIS IN RETT SYNDROME PATIENT.; 88 DEGREE THORACOLUMBAR CURVE, HAS A 13 DEGREE PELVIC OBIQUITY, HAS APPROXIMATELY 35 DEGREE MAIN THORACIC CURVE, HER SITTING FILM, SHE HAS THORACOLUMBAR KYPHOSIS WITH A SLIGHTLY

pt c/o neck pain with pain down right arm. R/o impingement vs. herniated disk; This is a request for cervical spine MRI; None of the above; It is not known if the patient does have new or changing neurologic signs or symptoms.; It is not known if the patient has had back pain for over 4 weeks.

Reports history of scoliosis, diagnosed in 7th grade. Back pain has been gradually getting worse. Pain is severe in intensity and aching, dull, piercing, throbbing in nature. Pain radiates into the left lateral thigh region. She also has cramps in the; This study is being ordered for Congenital Anomaly.; pt has scoliosis; It is not known if there has been any treatment or conservative therapy.; pain in the back that radiates down into the hip and groin

SEE CLINICAL; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; UNKNOWN; There has not been any treatment or conservative therapy.; X-RAY DEMONSTRATES A LUMBAR LORDOSIS OF APPROXIMATELY 110 DEGREES, PROGRESSIVE WEAKNESS AND LOSS OF COORDINATION, HAS HAD COMPENSATORY CHANGES IN HIS THORACIC SPINE AND HIS PELVIS

spondylolisthesis; This study is being ordered for a neurological disorder.; 9/16/15; There has been treatment or conservative therapy.; Neck and mid back pain radiating into his shoulders, scapula. abnormal reflex of upper extremity and abnormal strength.; medications

symptoms getting worse despite conservative treatment.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Several years; There has been treatment or conservative therapy.; neck pain with arm pain, severe back pain and radiating right leg pain; Physical therapy, chiropractic treatment, pain medication, muscle relaxers, anti-inflammatories

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; It is not known if this patient had a recent course of supervised physical Therapy.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.

This is a 52-year-old right-hand dominant female who presents with neck pain. She was referred by Dr. Pearce to rule out cervical pathology. Pain is moderate in intensity. Pain is getting worse. Pain radiates into the shoulder upper arm, forearm, to t; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; DocumePain radiates into the shoulder upper arm, forearm, to the hand. Denies any numbness and tingling. Arm feels weak. She has some symptoms on the right, but left is worse.nt exam findings; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

This is a request for cervical spine MRI; "The patient has been seen by, or the ordering physician is, a neuro-specialist, orthopedist, or oncologist."; Follow-up to Surgery or Fracture within the last 6 months

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; Neurological deficits; Pain seems to be getting worse. She has notices numbness and tingling down into her left arm and pain and tingling into the base of her skull. This seems to be positional. There is no specific injury. She describes the pain as dull, achy pains intermi; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; None of the above; medications , status post AED; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

This is a request for cervical spine MRI; None of the above; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; Pre-Operative Evaluation; Cervicalgia with possible mild enlargement/edema in the bilateral C7 and C8 nerve roots on noncontrasted MRI; Thoracic pain; ; Plan; The axial images demonstrate possible mild enlargement/edema in the bilateral C7 and C8 nerve roots. No evidence of nerve; No, the patient does not have new or changing neurological signs or symptoms.; Yes, the last Cervical spine MRI was performed within the past two weeks.

This is a request for cervical spine MRI; Pre-Operative Evaluation; No, the last Cervical spine MRI was not performed within the past two weeks.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; Trauma or recent injury; ; It is not known if the patient have new or changing neurological signs or symptoms.

This is a request for cervical spine MRI; Trauma or recent injury; ; No, the patient does not have new or changing neurological signs or symptoms.

This is a request for cervical spine MRI; Trauma or recent injury; Has persistent pain the neck, persistent jaw pain and headaches after motor vehicle accident 6 months ago. Has a possible significant sprain of the posterior cervical ligament; It is not known if the patient have new or changing neurological signs or symptoms.

This is a request for cervical spine MRI; Trauma or recent injury; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

Trying to rule out neurological disorder vs brachial plexus injury; This study is being ordered for a neurological disorder.; 6-7 months; There has been treatment or conservative therapy.; Marked weakness LUE; hemiplegia; Muscle relaxers & NSAID's

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; unknown; It is not known if there has been any treatment or conservative therapy.; unknown

unknown; This study is being ordered for trauma or injury.; 10/8/2015; It is not known if there has been any treatment or conservative therapy.; Severe pain radiating into right arm & back pain radiating into right leg

; This study is being ordered for Congenital Anomaly.; the pt is having back pain from scoliosis that was found when she was 16, the pain is continuing to get worse; There has been treatment or conservative therapy.; back pain that radiates into the buttock region on both sides; medications

At the level of T4, there is perceived mass effect on the posterior aspect of the cord with ventral cord displacement and narrowing of the AP dimension of the cord to 4 mm. This could simply be related to prominent CSF flow versus possibly another etio; This is a request for a thoracic spine MRI.; Pre-Operative Evaluation; Surgery is not scheduled within the next 4 weeks.

Called with MRI that he dropped off at our clinic performed at MD Anderson 9/1/15. There is some enhancement surrounding the exiting left L3 nerve root in the left L3 foramen. This would be an unusual manifestation of metastatic renal cell, follow-up MR; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

CONTINUED EVALUATION; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has not been any treatment or conservative therapy.; NEUROMUSCULAR SCOLIOSIS, KLIPPEL-FEIL SYNDROME, CERVICAL STENOSIS, KAWASAKI DISEASE, INCREASE IN DEXTROSCOLIOSIS OF THE THORACIC SPINE AND LEVOSCOLIOSIS OF THE LUMBAR SPINE.

PATIENT HAS FAILED NUMEROUS CONSERVATIVE METHODS, INCLUDING MEDICATION, RESTING AND CHANGE IN ACTIVITY WITH NO RELIEF. PATIENT HAS DDD AND RADICULOPATHY.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; PATIENT HAS HAD PAIN FOR THE PAST 12 WEEKS WITHOUT RELIEF; There has been treatment or conservative therapy.; PAIN IN SHOULDER, NECK AND BACK, BOTH SIDES. PATIENT ALSO HAS RADICULOPATHY. PATIENT HAS TROUBLE SLEEPING AT NIGHT AND LAYING ON EITHER SIDE.; PATIENT HAS HAD CHANGE IN ACTIVITY BECAUSE HE HAS TROUBLE SITTING AND STANDING. HE HAS USED REST AND TRACTION, AND ALSO MEDICATIONS WITHOUT RELIEF PREOPERATIVE WORK FOR SPINE SURGERY; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/9/2015; There has been treatment or conservative therapy.; Scoliosis; Physical therapy and medications

PRE-OPERATIVE; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/2014; There has not been any treatment or conservative therapy.; PROGRESSIVE NEUROMUSCULAR THORACOLUMBAR SCOLIOSIS IN RETT SYNDROME PATIENT.; 88 DEGREE THORACOLUMBAR CURVE, HAS A 13 DEGREE PELVIC OBIQUITY, HAS APPROXIMATELY 35 DEGREE MAIN THORACIC CURVE, HER SITTING FILM, SHE HAS THORACOLUMBAR KYPHOSIS WITH A SLIGHTLY

Reports history of scoliosis, diagnosed in 7th grade. ; Back pain has been gradually getting worse. Pain is severe in intensity and aching, dull, piercing, throbbing in nature. 1. Spondylolysis, L5-S1 with minimal spondylolisthesis, numbness radiating down the right leg; 2. Degenerative disc disease; 3. Bilateral subacute sacral ala fractures; 4. Prior scoliosis corrective surgery with Harrington rod placement performed 1977; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; She has greater than 6 month history of low back pain that started in December and was significantly aggravated by walking this past spring when she developed numbness. ; Pain is moderate to severe in intensity and aching, burning in nature. Back pain will; There has been treatment or conservative therapy.; Pain is moderate to severe in intensity and aching, burning in nature. Back pain will radiate into the left buttock. Positive for numbness that radiates laterally down the right leg into the foot. She also has numbness in the left foot at times. Pain is a; She has had two rounds of physical therapy which helped minimally. ; She had LESI 2 weeks ago at Baptist radiology departmen

Arkansas Specialty Orthopaedics, 600 South McKinley, Little Rock, AR 72205;

_____ ; PATIENT: Robert Boughton; MED REC NUM: 00000235778; DATE OF BIRTH: 02/10/1972; AGE: 43 Years; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Called with MRI that he dropped off at our clinic performed at MD Anderson 9/1/15. There is some enhancement surrounding the exiting left L3 nerve root in the left L3 foramen. This would be an unusual manifestation of metastatic renal cell, follow-up MR; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

CONTINUED EVALUATION; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has not been any treatment or conservative therapy.; NEUROMUSCULAR SCOLIOSIS, KLIPPEL-FEIL SYNDROME, CERVICAL STENOSIS, KAWASAKI DISEASE, INCREASE IN DEXTROSCOLIOSIS OF THE THORACIC SPINE AND LEVOSCOLIOSIS OF THE LUMBAR SPINE.

Decreased motor strength, absent reflexes in patella and Achilles, anterolisthesis.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

EMG and nerve study done of his upper extremities and lower extremities and the reports was there was denervation findings on EMG in the bilateral upper extremities especially triceps muscle were also fasciculations were seen. The there was bilateral C7 r; This study is being ordered for a neurological disorder.; Unknown; There has been treatment or conservative therapy.; Paresthesias in both thighs, coughing and sneezing cause back pain,; Anti-inflammatories, Flexeril, chiropractic care, rest, activity modification.

He has a lot of pain with forward bending, in his back & down the anterior thigh. Left patellar reflexes diminished compared to the right, SLR causes significant pain bilaterally, primarily in the back. Worse on the left than the right. Hamstrings are very; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

I discussed my findings with the patient in detail including options of treatment and the benefits and risks of each. She has had 4 years of pain. She has worst discomfort in supine position and at rest. She has increasing pain and aggravation followin; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2011; There has been treatment or conservative therapy.; right hip, low right sided back pain. pain for four years, pain is localized on the right side, posterior, achy, pain is worse at rest, lying than when sitting or standing. activity does cause increased pain. pain is achy and constant.; ibuprofen, SI joint injection

Jesse Cash is a 38 years old Male from Everton, AR. Patient had surgery in 2010 by Dr. Tom Peck Coker where he underwent a partial medial meniscectomy partial lateral meniscectomy and minor synovectomy. ACL was deficient. He continued to have pain continu; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Lower back pain chronic duration. Numbness of both legs. Limited range of motion in lumbar spine. Pain with flexion. Diminished touch sensation to left lateral thigh. Patient describes left lower extremity weakness.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Lumbago, lumbar spondylosis, and muscle spasms. Further evaluate any abnormalities in the lumbar and pelvic region.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/15/2015.; There has been treatment or conservative therapy.; Lower back pain that is chronic in duration. Pain in left lower lumbar that radiates down left hip to left knee that is a constant moderate ache that is not relieved with medications. Limited range of motion throughout lumbar spine. Pain demonstrated with; Physical therapy which didn't help. Lumbar Spine Examination Brief Exam; Skin: There are no abrasions, contusions, or erythema. ; Gait: Gait and station are normal. The patient ambulates unassisted. ; Inspection: Local inspection shows no step-off or bruising. Lumbar alignment is normal. Sag; The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for None of the above

Lumbar Spine Examination Brief Exam; Skin: There are no abrasions, contusions, or erythema. ; Gait: He ambulates with a broad based gait forward flexed. ; Inspection: Local inspection shows no step-off or bruising. Lumbar alignment is normal. Sagittal and ; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; STRENGTH: HE HAS GLOBAL WEAKNESS.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

n.a; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has directed a home exercise program for at least 6 weeks.; The home treatment did include exercise, prescription medication and follow-up office visits.; 6 week treatment with low back exercises, and daily anti inflammatory and heat therapy
Pain in the back; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Pain is severe in intensity and burning, throbbing in nature. Pain is getting worse. Pain was initially radiating down her right leg with numbness and tingling. Recently, she developed pain down her left leg posteriorly into the facet. Positive for nu; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.; NEUROLOGIC: The patient has 5/5 strength in all lower extremity myotomes. Sensation intact to light touch in lower extremity dermatomes, diminished in the L4 and L5 dermatomes on the right compared to left. . Negative clonus. Negative Babinski. Negat

patient has had pain approx 3 months, MRI right knee per PCP unremarkable; patient states pain goes up and down right leg; The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for None of the above

patient has low back pain that is radiating down right leg that is getting worse; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Patient has numbness, burning, tingling and pain in arms and legs, hands and feet, bilaterally. Progressively worsening.; This study is being ordered for a neurological disorder.; Patient has had pain in her neck and lower back, hands and feet for some time. It is progressively worsening. It has been going on for at least 10 years; There has been treatment or conservative therapy.; Numbness, tingling, burning, pain in hands and feet, arms and legs, bilaterally; Patient has been given anti-inflammatory drugs, pain medication and nerve pain medications. She has been recently been given a script for PT for core strengthening, which she will start ASAP

Patient presented to the clinic for evaluation of diffuse cervical and lumbar spine pain. Reports falling 20 feet off of a ladder in 2008. Patient was diagnosed with a lumbar vertebral fracture in 2009 and reports continued pain in his arms and legs, numb; This study is being ordered for a neurological disorder.; 2008; There has been treatment or conservative therapy.; Patient presented to the clinic for evaluation of diffuse cervical and lumbar spine pain. Reports falling 20 feet off of a ladder in 2008. Patient was diagnosed with a lumbar vertebral fracture in 2009 and reports continued pain in his arms and legs, numb; Physical Therapy which patient was unable to tolerate due to pain symptoms.

Patient states lower lumbar pain worsened in 2013 secondary to breaking right calcaneus and shifting gait. States the pain is a 'nagging pain' that comes and goes with prolonged standing, but is at times a sharp, stabbing pain.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; It is not known if the patient has new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Persistent back pain with radiculopathy.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Weakness in bilateral legs, Diminished sensation in S1 dermatome left lower extremity.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

-persistent pain and not responding to conservative tx; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 01/01/2010; There has been treatment or conservative therapy.; - ongoing lo back pain numbness and tingling as well. 8-10/10; - Neck pain radiates to bilateral shoulders, numbness and tingling. 8-10/10; - PT both L and C spine 10/01/2015; - Cyclobenzaprine and Prednisone

Physical Therapy discontinued by therapist due to treatment not helping.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Weakness secondary to pain with left straight leg raise.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

PLAN: I discussed my findings with the patient in detail including options of treatment and the benefits and risks of each. He has been having symptoms for over a year, he has been taking narcotic analgesics, he has had injections about his SI joint ar; This study is being ordered for trauma or injury.; 2011; There has been treatment or conservative therapy.; M25.552-Pain in left hip;M54.42-Lumbago with sciatica, left side; Pain is constant, burning, sore. Has more pain in sitting and supine positions than standing. However, he notes that he can't work because he has difficulty standing for prolonged perio; c/O low back pain, left SI Joint- had cortisone injection into SI area Friday 12/11/15 Seth Garner - no help; Saw Chiropractor - no help. Takes Tylenol #4 daily 4-6 tabs per Seth Garner Chiropractor/NP

possible candidate for epidural injections to both areas; xrays show no fractures; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 7/25/2015; There has been treatment or conservative therapy.; severe neck pain that radiates down both shoulder; difficulty with turning head side to side; limited range of motion; severe low back pain that radiates down to both legs; difficulty laying flat; painful bending over; Physical Therapy; Medication; Xrays were done PREOPERATIVE WORK FOR SPINE SURGERY; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/9/2015; There has been treatment or conservative therapy.; Scoliosis; Physical therapy and medications

PRE-OPERATIVE; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/2014; There has not been any treatment or conservative therapy.; PROGRESSIVE NEUROMUSCULAR THORACOLUMBAR SCOLIOSIS IN RETT SYNDROME PATIENT.; 88 DEGREE THORACOLUMBAR CURVE, HAS A 13 DEGREE PELVIC OBIQUITY, HAS APPROXIMATELY 35 DEGREE MAIN THORACIC CURVE, HER SITTING FILM, SHE HAS THORACOLUMBAR KYPHOSIS WITH A SLIGHTLY

pt has been given medications and a home program to strengthen and work on the back.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

pt has had back surgery previously and is now having back pain again; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Pt has had surgery before and having pain now; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

pt has radicular like pain bilaterally; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has NOT had back pain for over 4 weeks.

pt is having radiating pain and the pt has complete PT and steroid injections for the problem; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

SEE CLINICAL; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; UNKNOWN; There has not been any treatment or conservative therapy.; X-RAY DEMONSTRATES A LUMBAR LORDOSIS OF APPROXIMATELY 110 DEGREES, PROGRESSIVE WEAKNESS AND LOSS OF COORDINATION, HAS HAD COMPENSATORY CHANGES IN HIS THORACIC SPINE AND HIS PELVIS

the pt is continuing to have radicular like pain after conservative at home treatment; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; other medications as listed.; The patient has completed 6 weeks or more of Chiropractic care.; neurotin

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have a new foot drop.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; other medications as listed.; The patient has completed 6 weeks or more of Chiropractic care.; Naproxin 550 Mg, Lyrica 75 MG

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; other medications as listed.; The patient has completed 6 weeks or more of Chiropractic care.; diclofenac, hydrocodone, Robaxin, Voltaren gel

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; The patient has completed 6 weeks or more of Chiropractic care.

The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for Pre-operative evaluation; The patient has not had a Lumbar Spine MRI performed within the past 2 weeks.

The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Follow-up to surgery or fracture within the last 6 months; The patient been seen by or the ordering physician is a neuro-specialist, orthopedist, or oncologist.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Neurologic deficits

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Pre-operative evaluation; The patient has not had a Lumbar Spine MRI performed within the past 2 weeks.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal nerve study involving the lumbar spine

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has completed Treatment with a facet joint or epidural injection in the past 6 weeks

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

This is a 60-year-old male who presents with thoracolumbar pain. He has chronic back pain, for years. He has pain in the thoracolumbar region. Pain is getting worse. Pain is severe in intensity and piercing in nature. Pain is aggravated by lifting; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

to evaluate for fracture after surgery; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has been treatment or conservative therapy.; severe pain of the left leg; pt has undergone surgery and is now having pain

to evaluate why the pt is still having pain; This study is being ordered for trauma or injury.; july 2015; There has been treatment or conservative therapy.; continued back pain after surgery in july 2015; medications, surgery, pt, home exercises

track and field athlete with chronic low back pain since 11/4/15. pt has failed NSAIDS, supervised PT, chiropractic (including traction and E-stem), rest, activity modification. symptoms not improving with treatment; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

unknown; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; rt leg weakness with a positive straight leg raise 4 of 5; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Unknown; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Unknown; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

We will obtain a bone scan with SPEC imaging of the lumbar spine, pelvis and hip in order to ensure there is no pathology that we are not seeing on x-ray; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

< Enter answer here - or Type In Unknown If No Info Given. >; There is not a known tumor.; This study is being ordered as pre-operative evaluation.; "The ordering physician is NOT an oncologist, urologist, gynecologist, gastroenterologist or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; There is NO known pelvic infection.; This is a request for a Pelvis CT.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered due to known or suspected infection.; "The ordering physician is a surgeon, gynecologist, urologist, gastroenterologist, or infectious disease specialist or PCP ordering on behalf of a specialist who has seen the patient."; This is a request for a Pelvis CT.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for some other reason than the choices given.; This is a request for a Pelvis CT.

; The patient is undergoing active treatment for cancer.; This study is being ordered for known tumor, cancer, mass, or rule-out metastasis.; "The ordering physician is an oncologist, urologist, gynecologist, gastroenterologist or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; This study is not being ordered for initial staging.; This is a request for a Pelvis CT.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.; CHIEF COMPLAINT: 1. Increasing left hip pain and left leg numbness.; 2. History of synovial chondromatosis, left hip; surgery 12/03/2007

I am going to CT her pelvis to look at the fracture in the back and make sure that were healing and doing well and look at the pelvic ring itself. She may have pelvic pain from an area that is not healing, which could be related to instability or to infec; This study is being ordered due to known or suspected infection.; "The ordering physician is a surgeon, gynecologist, urologist, gastroenterologist, or infectious disease specialist or PCP ordering on behalf of a specialist who has seen the patient."; This is a request for a Pelvis CT.

motor vehicle accident f/u ct to ck for fracture healing; This study is being ordered as a follow-up to trauma.; There is NO laboratory or physical evidence of a pelvic bleed.; There are no physical or abnormal blood work consistent with peritonitis or pelvic abscess.; There is physical or radiological evidence of a pelvic fracture.; "The ordering physician is not a gastroenterologist, urologist, gynecologist, or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; This is a request for a Pelvis CT.

; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

1. Spondylolysis, L5-S1 with minimal spondylolisthesis, numbness radiating down the right leg; 2. Degenerative disc disease; 3. Bilateral subacute sacral ala fractures; 4. Prior scoliosis corrective surgery with Harrington rod placement performed 1977; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; She has greater than 6 month history of low back pain that started in December and was significantly aggravated by walking this past spring when she developed numbness. ; Pain is moderate to severe in intensity and aching, burning in nature. Back pain wil; There has been treatment or conservative therapy.; Pain is moderate to severe in intensity and aching, burning in nature. Back pain will radiate into the left buttock. Positive for numbness that radiates laterally down the right leg into the foot. She also has numbness in the left foot at times. Pain is a; She has had two rounds of physical therapy which helped minimally. ; She had LESI 2 weeks ago at Baptist radiology departmen

Chronic right hip/hamstring pain for 6 years. Pain mostly when running or sitting and cannot sit for more than ten minutes. She has tried exercises and taken anti-inflammatories with continued pain. MRI is ordered to evaluate the hamstring attachment.; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

I discussed my findings with the patient in detail including options of treatment and the benefits and risks of each. She has had 4 years of pain. She has worst discomfort in supine position and at rest. She has increasing pain and aggravation followin; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2011; There has been treatment or conservative therapy.; right hip, low right sided back pain. pain for four years, pain is localized on the right side, posterior, achy, pain is worse at rest, lying than when sitting or standing. activity does cause increased pain. pain is achy and constant.; ibuprofen, SI joint injection

Lumbago, lumbar spondylosis, and muscle spasms. Further evaluate any abnormalities in the lumbar and pelvic region.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 08/15/2015.; There has been treatment or conservative therapy.; Lower back pain that is chronic in duration. Pain in left lower lumbar that radiates down left hip to left knee that is a constant moderate ache that is not relieved with medications. Limited range of motion throughout lumbar spine. Pain demonstrated with; Physical therapy which didn't help.

mri to see involvement in both femur heads and treatment needed; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

patient fell on ice 8 to 9 months ago and has severe pain not improved with other treatments; This is a request for a Pelvis MRI.; The study is being ordered for pelvic trauma or injury.; This is an evaluation of the tail bone (coccyx).

PATIENT PLAYS SPORTS CONSISTENTLY. SINCE THERE IS A MASS THE PHYSICIAN WANTS TO LOOK AT THE THIGH AND HIP, TO HELP DETERMINE WHAT TREATMENT, WHETHER SURGICAL OR NON SURGICAL, TO PURSUE.; This study is being ordered for trauma or injury.; 11/06/2015; There has been treatment or conservative therapy.; POPPING AND BRUISING WHEN HE HAD A HAMSTRING TEAR. ALSO HAS A PALPABLE LUMP AND DEFECT IN THE PROXIMAL THIGH. EXAM OF THE LEFT LEG SHOWS A PALPABLE DEFECT AT THE PROXIMAL HAMSTRING WHEN HE DOES RESISTED KNEE FLEXION. THERE IS A FIRM MASS CONSISTENT WITH A; HE HAS LIMITED ROM AND AT TIMES CANNOT PLAY SPORTS. HAS HAD A PREVIOUS ACL SURGERY IN 2009. HE RUNS, ALSO, AND HAS NOT BEEN ABLE TO DO THAT. HAS TAKEN IBUPROFEN AND USED ICE AND REST.

Pelvis Pain/ Joint Pain; This is a request for a Pelvis MRI.; The study is being ordered for something other than suspicion of tumor, mass, neoplasm, metastatic disease, PID, abscess, Evaluation of the pelvis prior to surgery or laparoscopy, Suspicion of joint or bone infect

physical exam inconclusive as to reason for pain. No trauma involved. Pt has failed 3 months conservative treatment. MRI to evaluate L Iliac crest stress fracture vs avulsion; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

PLAN: I discussed my findings with the patient in detail including options of treatment and the benefits and risks of each. He has been having symptoms for over a year, he has been taking narcotic analgesics, he has had injections about his SI joint ar; This study is being ordered for trauma or injury.; 2011; There has been treatment or conservative therapy.; M25.552-Pain in left hip; M54.42-Lumbago with sciatica, left side; Pain is constant, burning, sore. Has more pain in sitting and supine positions than standing. < Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 09/04/2015; There has been treatment or conservative therapy.; l/shoulder pain, stiffness, decreased ROM; anti-inflammatories; HEP begin date 9/4/2015 - ongoing

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; Posotive Spurlings 09/24/2014; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; Pt has had epidural steroid injections, and NSaid therapy, also pt has been doing a Home exercise program started in 09/24/2015

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; july -2015; It is not known if there has been any treatment or conservative therapy.; disorder of the shoulder

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; There has been treatment or conservative therapy.; shoulder and back pain; medication/injections/

; The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; It is not known if the patient has completed 6 weeks or more of Chiropractic care.; The physician has directed a home exercise program for at least 6 weeks.; The home treatment did include exercise, prescription medication and follow-up office visits.; ; The patient received oral analgesics.

; The requested study is a Shoulder MRI.; The pain is from a recent injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

; The requested study is a Shoulder MRI.; The study is not requested for any of the standard indications for Knee MRI; The study is not requested for shoulder pain.

; This study is being ordered for a neurological disorder.; ; There has been treatment or conservative therapy.; Chief complaint: Right hand numbness/tingling and hand stiffness; ; History of present illness; This is a 49-year-old right-hand-dominant male that comes in complaining of right hand numbness and tingling as well as right hand stiffness. This began after;

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 3/15/15; There has been treatment or conservative therapy.; left forearm pain/numbness/ weakness with griping/minimal tenderness/; prescribed medications/injections/change in home activity/ice and rest/x-ray negative

; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.;

; This study is being ordered for trauma or injury.; pt states that she has been having pain for 2 months or longer; There has been treatment or conservative therapy.; the pt is having pain in both shoulders.; steroid injections

Cervical spondylosis and impingement syndrome to the left shoulder. Neck and shoulder pain. Meds and physical therapy have not helped.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has been treatment or conservative therapy.; Left neck and shoulder pain with some pain to the left arm.; anti-inflammatories, physical therapy

Dr. Would like to rule out RCT; The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; It is not known if the physician has directed a home exercise program for at least 6 weeks.; Aleve, Tylenol , Icy hot, Heat and Ice.; The patient received medication other than joint injections(s) or oral analgesics.

elbow pain; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; There is a suspicion of tendon or ligament injury.; This is a request for an elbow MRI; The study is requested for evaluation of elbow pain.

Fell off Ladder and landed Directly on Left Shoulder and Left Knee. Immediate pain after falling.; This study is being ordered for trauma or injury.; 12/25/2015; There has not been any treatment or conservative therapy.; Pain and swelling in Left Shoulder and Left Knee

HISTORY OF PRESENT ILLNESS: Patient presents today with an injury to his left shoulder. He was involved in a automobile accident 1 month ago. He was a restrained driver. He complains of popping and pain in his left shoulder since that time. He had no prev; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

ligament tear , unstable with thumb , laxotee in the md joint; This study is being ordered for trauma or injury.; july 1 2015; There has been treatment or conservative therapy.; pain with range of motion , pain with Obrien testin , pain over her by pass tendon suspecting for labral tear; occupational therapy

MULTI DIRECTIONAL -INSTABILITY  SUPER SPANATIVE INJURY  HOME EXERCISE  HAS HAD INJECTION TO RIGHT SHOULDER POPPING, WEAKNESS, NUMNESS AT NIGHT  NECK PAIN  MEDICATIONS- TYLENOL AND MUSCLE RELAXER AS NEEDED; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthrscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

New Pt. Pt dislocated shoulder when 16, repair @ 18. Pt is having pain.; The requested study is a Shoulder MRI.; The pain is from an old injury.; The request is for shoulder pain.; The physician has not directed conservative treatment for the past 6 weeks.

none; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2/12/2014; There has been treatment or conservative therapy.; Shoulder: r/o RCT, numbness, radiating pain, weakness, pos impingement, xray neg Cervical: pain radiating, evaluate for DJD and radiculopathy, xray neg; Nsaids, PT,

Patient had a fall on 12/12/15 and had her shoulder relocated at MedEx and continues to have pain and popping. She is in a shoulder sling immobilizer. She has weakness on clinical exam. Dr. Ghormley has ordered a MRI to rule out a rotator cuff tear. If MRI; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthrscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

PATIENT HAD AN INJURY WHERE SHE FELL ON HER ARM AND CAUGHT HERSELF ON HER SHOULDER. SHE HAS SEVERE PAIN, HX OF INSTABILITY AND MOVEMENT OF THE SHOULDER INCREASES PAIN. HAS SOME SWELLING ,CAN'T RAISE OVERHEAD WITHOUT PAIN.; The requested study is a Shoulder MRI.; The pain is from a recent injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

Patient has right forearm mass and posterior olecranon mass, painful, both are likely lipoma. MRI to eval masses and to preceded with surgery.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 07/14/2015; There has been treatment or conservative therapy.; worsened pain with multiple masses about the right forearm and elbow.; Mobic, night time bracing

PATIENT IS IN SEVERE PAIN,DR WANTS TO RULE OUT CUFF TEAR, HAS HAD CONSERVATIVE TX.; This study is being ordered for a neurological disorder.; PATIENT SAYS HE HAS HAD PAIN FOR 'SEVERAL YEARS' AND IT JUST KEEPS GETTING WORSE; There has been treatment or conservative therapy.; NECK AND SHOULDER PAIN, OCCASIONAL NUBMNESS DOWN TO HANDS, HE IS UNABLE TOS LEEP AT N IGH. HE HAS POSITIVE NEER AND HAWKINS. PATIENT LIKES TO EXERCISE AND IS UNABLE TO DO WHAT HE NORMALLY DOES.PHYSICAN WANTS TO RULE OUT CUFF TEAR; PATIENT HAS HAD CORTISONE SHOTS ON 10.08.15, HAS TRIED HOME EXERCISES, TAKES ASPRIN positive impingement, supraspinatus weakness; This study is being ordered for trauma or injury.; September 28, 2015; There has been treatment or conservative therapy.; Pain lifting arms away from body or overhead; OTC pain medication and ice. Home exercises.

pt c/o right shoulder pain after a self fell onto her right shoulder. Pain wakes her up at night. Pt has limited range on motion in her right shoulder. Positive impingement syndrome. also tender at her ac joint. Bruising on shoulder after injury. Pt; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

pt had a fall on 11.13.15 still having pain and dec rom, r/o traumatic cuff tear; The requested study is a Shoulder MRI.; The pain is from a recent injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

PT HAS HAD SHOULDER PAIN ABOUT 20 YEARS WITH MULTIPLE DISLOCATIONS; The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; It is not known if the physician has directed conservative treatment for the past 6 weeks.

Right shoulder pain after a fall.; The requested study is a Shoulder MRI.; The pain is from a recent injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

rt shoulder pain x 6 mths; The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

sharp stabbing pain; shoulder popped out of place; lifting and using it makes it worse; The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

She has a positive impingement and positive Hawkins. She has weakness with resisted abduction and is only barely able to hold the arm up against gravity.; The requested study is a Shoulder MRI.; The pain is from a recent injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

She has bilateral shoulder pain. Her pain has increased. She has had rotator cuff repair surgeries on both shoulders.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Right shoulder: 2008; Left shoulder: 2013; There has been treatment or conservative therapy.; bilateral shoulder pain, pain with mobility, pain at night, pain when laying on left side, tingling in the entire right hand.; She has had physical therapy, she has tried ice packs, home exercise program, prescription medication, and taken NSAIDs- Ibuprofen daily.

She has had an MRI 9 years ago showing a full-thickness tear of the right shoulder and a high-grade partial-thickness tear of the left shoulder. She has pain with motion. She also has some rotator cuff weakness. She states the left shoulder hurts worse; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has been treatment or conservative therapy.; Worsening bilateral shoulder pain. ; X-rays of the right and left shoulder show impingement with distal clavicle arthritis.; Meloxicam; Physical Therapy shoulder pain, 6 months getting worse,; The requested study is a Shoulder MRI.; The pain is not from a recent injury, old injury, chronic pain or a mass.; The request is for shoulder pain.

Shoulders: Inspection Right: no swelling and AC prominence exaggerated. Bony Palpation Right: tenderness of the bicipital groove. Soft Tissue Palpation Right: tenderness of the supraspinatus and the lateral cuff insertion. Active Range of Motion Right: li; The requested study is a Shoulder MRI.; The pain is from an old injury.; The request is for shoulder pain.; The physician has not directed conservative treatment for the past 6 weeks.

Tenderness: Tender at the ulnar styloid; Range of Motion: Full. Increased pain with ulnar deviation. ; The patient is a well-developed a well-nourished white female in no apparent distress. Alert and oriented times three with normal mood and affect. ; The pain is from a recent injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; There is a suspicion of tendon or ligament injury.; This request is for a wrist MRI.; This study is requested for evaluation of wrist pain.

The MRI's are medically necessary to treat the pt. He has failed over 6 weeks of conservative care and continues have pain.; This study is being ordered for trauma or injury.; initially started in 2003; There has been treatment or conservative therapy.; persistent radicular pain, paresthesia, muscle weakness, pain in the bilateral neck, right shoulder and right arm; Conservative care to include nonsteroidal anti-inflammatory medication, spinal exercises, and joint injections. patient has failed over 6 weeks of conservative care.

The pain is described as chronic; The member has failed a 4 week course of conservative management in the past 3 months.; This request is for a wrist MRI.; This study is requested for evaluation of wrist pain.

The pain is from a known mass.; The diagnosis of Mass, Tumor, or Cancer has been established.; The study is requested for staging.; This request is for a wrist MRI.; This study is requested for evaluation of wrist pain.

The pain is from a recent injury.; Surgery or arthroscopy is scheduled in the next 4 weeks.; There is a suspicion of tendon or ligament injury.; This is a request for an elbow MRI; The study is requested for evaluation of elbow pain.

The pain is from a recent injury.; There is a suspicion of fracture not adequately determined by x-ray.; Tendon or ligament injury is not suspected.; This request is for a wrist MRI.; This study is requested for evaluation of wrist pain.

The pain is from an old injury.; The member has failed a 4 week course of conservative management in the past 3 months.; This is a request for an elbow MRI; The study is requested for evaluation of elbow pain.

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation.";

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; check for right shoulder impingement versus rotator cuff tear

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; Continuous left shoulder pain. positive obriens test, positive compression test. need to rule out SLAP tear.

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; difficulty lifting arm, pain with overhead activity

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; hx of fall/injury 12/16/15, evaluate AC joint, r/o possible tear, pos tenderness, weakness with resistance, pos impingement test,

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; Injury that happen 2 months ago

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; joint pain, neuralgia, pain and weakness

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; labral lesion left shoulder

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; Pain in right shoulder after hitting overhead, felt shoulder slip at that time. Rested and went through therapy exercises but shoulder is worse. Feels weak and has looseness in her shoulder that is prohibiting sports participation (softball and volleyba

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; Patient had a MVA and recieved a suspected labral tear to right shoulder.

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; PT HAS RIGHT SHOULDER PAIN, WEAKNESS, BURNING, STABBING, GNAWING, DEEP PAIN, POSITIVE EMPTY CAN SIGN. The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; r/o RCT, pos tenderness, weakness, resistance, dec ROM, pos impingement,

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; R/O rotator cuff tear and weakness.

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation."; She continues to have symptoms of impingement and possibly a small cuff tear

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.;

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; . She describes pain with overhead activities. Certain motions cause her a lot of pain and others do not. It bothers her at night. No trauma.&#xOD; &#xOD; Right shoulder strain with impingement syndrome, chronic
The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Decreased abduction, decreased strength LUE. Positive Jobe's ,Neer & Hawkins sign.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Decreased range of motion/ Xrays type 2 acronym

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Examination left shoulder reveals re-creation of her pain with resisted external rotation. She has positive impingement on the left. Passive and active range of motion is painful in the shoulder.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Incomplete rotator cuff tear or rupture of right shoulder
The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Limited range of motion. Yergason test grin test are positive causing pain.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; pain is aching and sharp with no relieving factors. He also has cervical spine discomfort. Pain with rotation in the elevated position. There is some change at the greater tuberosity. Right shoulder pain syndrome with concern regarding degenerative phenom

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Patient has been given a injection for the shoulder pain. he is positive for impingement signs and positive for Hawkins test. Mild degenerative changes are seen @ the AC Joint

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Patient has had problems with the Left shoulder and it was Bone spurs and that is the same feeling he has in the Right shoulder at this time.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Patient has moderate shoulder pain of one year duration. Hurts when lifting or carrying. NSAIDS don't help.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; possible rotator cuff tear

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Positive Neers test, positive Hawkins, abnormal rotation , and limited range of motion

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; pt has had a recent steroid injection in the shoulder that did not help the pain

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; pt has had some shoulder injections and now the provider would like to see if the pt has torn her rotator cuff

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; pt is having pain in the right shoulder, onset in sept 2015

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; pt is having severe shoulder pain and dysfunction since 11/2015

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; pt is having shoulder and arm pain, feels like something is catching or popping.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; Right shoulder is been exacerbated with lifting. He had a repair done 10-12 years ago. Pain is severe, sharp and throbbing in getting worse

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; the patient has problems lifting and using it.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; the pt fell off of a horse and hurt the shoulder, this test is to be done with and arthrogram

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; the pt is having pain in the right shoulder, she has been treated with anti- inflamatories and she has also had injections

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; It is not known if the patient has completed and failed a course of conservative treatment.; unknown

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is an orthopedist.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.;

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; < Enter answer here - or Type In Unknown If No Info Given. >

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; 12.10.15 shoulder injury, rotator cuff sprain

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Continued left shoulder pain after activity modification.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; dislocated shoulder 12/6/15

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Fell off of a horse on 12/20/2015, xrays normal , no sign of fracture on exam has signs of possible rotator cuff tear

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; football injury to L shoulder. Pain, weakness, reduced ROM, reduced strength, swelling, bruising, joint instability and tenderness. Pt stated this is 3rd trauma to L shoulder in past 4 weeks. Increased onset of pain 10/28/15 after latest incident. concern

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; patient had cortisone shot in june 18 2015 and still having pain.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; previous surgery on shoulder

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; pt had a fall on 9.25.15 , hitting his shoulder on concrete floor

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; pt has had surgery to this shoulder before.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; pt is having pain in the shoulder that is severe and waking him up at night

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Pt was in a auto accident on 10/2 (thrown from car) he has normal xray but very small ROM that is very painful

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Shoulder pain / Trauma at football / dislocated shoulder ...Should is swelling and not doing better

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; shoulder pain- weakness with rotator cuff testing

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Trying to R/O liberal tear

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; It is not known if the patient has had recent plain films of the shoulder.;

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; It is not known if the patient has had recent plain films of the shoulder.;; Allan returns with a new complaint of right shoulder injury. He slipped one month ago while coming down some wet steps. As he was falling, he grabbed a spindle behind him. His arm was forcefully extended. He has had pain and limited motion since that

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; It is not known if the patient has had recent plain films of the shoulder.;; The patient fell at bowling alley on 11/28/15 and has severe shoulder pain. Has tried ibuprofen with no relief.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were normal.; It is not known if the patient is experiencing joint locking or instability.; The patient has a documented limited range of motion on physical examination.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were normal.; The patient is experiencing joint locking or instability.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were not normal.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The results of the plain films is not known.; The patient is experiencing joint locking or instability.

The requested study is a Shoulder MRI.; Study being ordered for post-operative evaluation.; The ordering physician is an orthopedist.

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.).";

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; He has previously had an injection which did not help. He describes the pain as sharp, achy pains intermittently moderate in severity. He also complains of pain at night. No numbness and tingling is noted. I gave him an injection back in June that was

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; impingement signs are positive , ac joint pro active test are mild

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; Pain has slowly worsened. He now has a lot of popping and pain. Particularly has pain when reaching overhead in a forward direction. He also has a lot of pain at night. He is taking meloxicam since he was nearly 20 years old. . Patient has had a sub

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is aggravated by reaching, overhead activities, and lifting above shoulder height. There was no accident involved. The patient has had a previous cortisone injection without relief. Furthermore she is taken anti-inflammatory medication without

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is described as achy, dull pain is intermittent and moderate in severity. The pain is worse with overhead activity and lifting and better with rest. He also complains of pain at night. No numbness and tingling is noted. Forward elevation 130,

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is described as sharp, achy pains intermittently and 5 as in severity. The pain is worse with overhead activity and repetitive activity and better with medication. No numbness and tingling is noted. Supraspinatus is mildly weak, Infraspinatus i

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is worse with overhead activity and better with rest. The area that is most painful is the area around his rotator cuff insertion. A.C. Joint provocative tests are negative. Impingement signs are positive. Tenderness to palpation over anterola

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is worse with overhead activity and lifting and better with rest. Occasional numbness and tingling is noted. Supraspinatus is mildly weak, A.C. Joint provocative tests are positive. Impingement signs are positive. 4 views of the left and right

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is worse with overhead activity and reaching behind and better with rest and medications. He has a history of neck surgery and has some associated pain with that as well. He has been taking oxycodone 10 mg. Supraspinatus is weak, Infraspinatus i

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is worse with overhead activity and reaching behind and better with rest and medications. Supraspinatus is weak, Infraspinatus is strong, Subscapularis is strong. No evidence of any joint laxity or crepitus. No obvious atrophy. A.C. Joint pro

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The pain is worse with overhead activity and use of the shoulder and better with moist sheath and anti-inflammatories. No numbness and tingling is noted. She has had one injection which was helpful only for a few days. Her x-rays from outside office sh

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; This began while she was hanging a picture but not a significant injury. This was on October 10. The pain is described as sharp, achy pain that is constant and 7 out of 10 in severity. The pain is worse with overhead activity and motion and better with

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; This pain is significant and has been ongoing for several months. The onset was sudden and has become steadily worse. She rates the pain 7 on a 10 point scale. The pain is aggravated by reaching, overhead activities, and lifting above shoulder height.

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; It is not known if the study is for pre-operative planning.; < Enter answer here - or Type In Unknown If No Info Given. >

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; It is not known if the study is ordered prior to arthroscopic surgery.; It is not known if the study is for pre-operative planning.; She notes that she has had trouble with movement in the shoulder. She self diagnosed herself with a probable rotator cuff tear. Approximately 5 days ago the pain became acutely worse. She has pain with any type of movement. She also notes soreness pai

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.;

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; dislocation on 11-10-15, and now presents with classic symptoms of labral tear. wanting to confirm before surgery the extent of injury

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; His AC joint is unstable and plan is for MRI to plan our surigcal reconstuction of the AC ligaments.&#xOD; misalignment, scapular winging, and AC prominence exaggerated
XRAYS NEGATIVE

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; Left shoulder pain after a fall, rotator cuff tear.

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; n.a

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; none

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; Numbness, popping, clicking and grinding. Tenderness of the sternocostoclavicular joint, tenderness of greater tuberosity, supraspinatus tenderness, subacromial bursa, lateral cuff insertion. Limited ROM. Hawkins, neers and obriens test are positive. Abduction

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; PATIENT HAS A POSSIBLE LABRAL OR ROTATOR CUFF TEAR.

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; patient possibly has a rotator cuff tear. unable to lift arm above head. limited range of motion

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; PATIENT REINJURED SHOULDER ON 12/6/15 DOCTOR MOORE THINKS SHE MAY HAVE RETURN REPAIR

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; Pt had surgery on 9/4/15 b/c of a fracture but then dislocated his shoulder at the end of September, CT scan showed that the shoulder was reduced, now c/o of pain, slight decrease in nerve distribution, has weakness and MDO is suspecting a labral tear.

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; Right shoulder dislocation with Bankart lesion.

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; SUSPECTED LABRAL TEAR

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; Suspected Rotator Cuff Tear

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; tenderness at bicipital groove, tenderness of glenohumeral joint region, active/passive range of motion is limited, empty can test, feed test, anterior apprehension test, load and shift test are all positive

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; Tenderness of the greater tuberosity, tenderness of the glenohumeral region. Limited range of motion. Hawkins test and Neer's test, anterior apprehension test is positive. Abduction is 3/5 and flexion is 3/5

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; TENDERNESS, LESSER TUBEROSITY, HUMERUS JOINT REGION, PECTORALIS MAJOR INSERTION SUBSCAPULAR PAIN, INTERNAL ROTATION IS 4/5. CATCHING LOCKING POPPING GRINDING IN SHOULDER

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; The patient fell off of a ladder on 12/24/15 falling at least 8 feet. He landed on his right shoulder. His symptoms are consistent with a greater tuberosity fracture. Possible rotator cuff tear. An MRI is ordered to evaluate the right shoulder for a great

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; The patient has a dull aching pain with weakness. Tenderness and lateral cuff insertion with limited range of motion, passive/active, external rotation at 0 deg of abduction, X rays from 11/16/2015 shows no abnormalities

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is being ordered prior to arthroscopic surgery.; the patient is a 31-year-old female previously treated with subacromial injection for impingement and bursitis. She notes approximately four weeks of relief following the injection, but the pain has recurred in a similar manner. She complains of pain wi

The requested study is a Shoulder MRI.; Study being ordered for pre-operative evaluation; This study is not being ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."

The requested study is a Shoulder MRI.; Study being ordered for suspicious mass/tumor/metastasis.; The patient has had recent plain films of the shoulder.; The plain films were not normal.

The requested study is a Shoulder MRI.; Study being ordered for suspicious mass/tumor/metastasis.; There are physical findings (palpable mass) of a suspicious mass or known primary site of cancer.; The patient has not had a recent bone scan.; The patient has had recent plain films of the shoulder.; The plain films were normal.; The patient has not had a recent CT of the shoulder.

The requested study is a Shoulder MRI.; Study is being ordered for known/suspected joint infection.; The plain films were not normal.

The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient received joint injection(s).

The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The requested study is a Shoulder MRI.; The pain is described as chronic.; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient received joint injection(s).

The requested study is a Shoulder MRI.; The pain is from a recent injury.; Surgery or arthroscopy is scheduled in the next 4 weeks.; The request is for shoulder pain.; There is a suspicion of tendon, ligament, rotator cuff injury or labral tear.

The requested study is a Shoulder MRI.; The pain is from an old injury.; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient received joint injection(s).

The requested study is a Shoulder MRI.; The pain is from an old injury.; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

This nice lady is having some soreness in her left proximal humerus. I have followed her since she was an adolescent with a sessile osteochondroma of the left proximal humerus. She is starting to note paresthesias into her arm when she bumps the osteoch; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This patient has been seen by her primary care doctor for ongoing shoulder pain she has had oral steroid treatment as well as a home exercise program. She comes to us today with weakness in the right shoulder. The X-rays were negative. Worried she has a rotator cuff tear; The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has not directed conservative treatment for the past 6 weeks.

Trying to rule out neurological disorder vs brachial plexus injury; This study is being ordered for a neurological disorder.; 6-7 months; There has been treatment or conservative therapy.; Marked weakness LUE; hemiplegia; Muscle relaxers & NSAIDs

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; unknown; It is not known if there has been any treatment or conservative therapy.; unknown

Unknown; This study is being ordered for trauma or injury.; 11/15/2015; There has not been any treatment or conservative therapy.; Can't raise his arm or do anything with it.

; This study is being ordered for Inflammatory/ Infectious Disease.; 3/31/14; There has been treatment or conservative therapy.; Severe pain and weakness. Wears knee brace.; Physical therapy, medications including NSAIDs and oxycodone. Also had knee injections.

; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.; ;

patient has dysplasia & marked deformity left hip secondary to osteotomy; This study is being ordered for Congenital Anomaly.; birth; There has been treatment or conservative therapy.; pain; anti-inflammatories, altered activities, used cane

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient does not have a documented limitation of their range of motion.

This is a request for a hip CT.; This study is being ordered in conjunction with a pelvic CT.; There is not a suspected infection of the hip.; The patient has been treated with and failed a course of supervised physical therapy.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a request for a hip CT.; This study is not being ordered in conjunction with a pelvic CT.; There is not a suspected infection of the hip.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a request for a hip CT.; This study is not being ordered in conjunction with a pelvic CT.; There is not a suspected infection of the hip.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient has a documented limitation of their range of motion.

This is a request for a hip CT.; This study is not being ordered in conjunction with a pelvic CT.; There is not a suspected infection of the hip.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has a documented limitation of their range of motion.

This is a request for a hip CT.; This study is not being ordered in conjunction with a pelvic CT.; There is not a suspected infection of the hip.; The patient has been treated with and failed a course of supervised physical therapy.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a request for a Lower Extremity CT.; This is a preoperative or recent postoperative evaluation.

This is a request for a Lower Extremity CT.; This is not a preoperative or recent postoperative evaluation.; There is no suspicion of a lower extremity neoplasm, tumor or metastasis.; There is no suspicion of lower extremity bone or joint infection.; There is a history of lower extremity joint or long bone trauma or injury.

This is a request for a Lower Extremity CT.; This is not a preoperative or recent postoperative evaluation.; There is no suspicion of a lower extremity neoplasm, tumor or metastasis.; There is no suspicion of lower extremity bone or joint infection.; There is not a history of lower extremity joint or long bone trauma or injury.

This is a request for a Lower Extremity CT.; This is not a preoperative or recent postoperative evaluation.; There is no suspicion of a lower extremity neoplasm, tumor or metastasis.; There is suspicion of lower extremity bone or joint infection.

This is a request for an ankle CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

This is a request for an ankle CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

This is a request for an ankle CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; There is not a suspected tarsal coalition.; The patient does not have a documented limitation of their range of motion.

This is a request for an ankle CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

Yes, this is a request for CT Angiography of the lower extremity.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; It is not known if the patient has been treated with medication.; It is not known if the patient has completed 6 weeks or more of Chiropractic care.; It is not known if the physician has directed a home exercise program for at least 6 weeks.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is not from a recent injury, old injury, chronic pain or a mass.

. Diagnosis: Left knee mild osteoarthritis with possible internal derangement; Left Talus osteophyte and ankle osteoarthritis with possible internal derangement; Continued pain with failure of conservative treatment.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 06/2015; There has been treatment or conservative therapy.; Ankle Pain that goes up into her knee and medial knee pain. Pain with weightbearing during sports.; Mobic, Naproxen, Depo-Medrol injection for the ankle, instructed in home exercises for both ankle and knee. ; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days

; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; It is not known if surgery or arthroscopy is scheduled in the next 4 weeks.

; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

; This is a request for an Ankle MRI.; It is not known if surgery or arthroscopy is scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

; This study is being ordered for a neurological disorder.; Unknown; There has been treatment or conservative therapy.; parasthesis Both Extrimities, Stiffness in Neck,Popping and pain, for Knee Effussion, pain, and Medial Joint line tenderness.; Mobic

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for trauma or injury.; July 2015; There has been treatment or conservative therapy.; Pain, mechanical symptoms, both knees are buckling, flection, injury while playing; Anti inflammatory medication and oral steroids

; This study is being ordered for trauma or injury.; September 23.2015; There has been treatment or conservative therapy.; STEPPED OUT OF TRUCK AND FELT A PULL OR POP INT HE KNEES. SWELLING, HAS HAD ONGOING PAIN SINCE. PAIN INCREASED WITH STANDING OR WALKING. HAS MEDIAL AND LATERAL JOINT LINE TENDERNESS. POSITIVE MCMURRAYS ON THE LATERAL SIDE. XR REVEAL MILD DJD.; hehas been on mobic, and has a knee support. he has tried injections and used rest and ice.

46-year-old female with bilateral knee pain. She has failed to improve with conservative measures. At this point, I feel that advanced imaging is warranted. I ordered MRI of both knees. She'll follow-up after the MRIs.; This study is being ordered for trauma or injury.; 06/28/2015; There has been treatment or conservative therapy.; Swelling in knees, painful knees, pain with McMurray's, effusion; Physical therapy, anti-inflammatories, topical medication

Bilateral knees: Skin is pink warm, and intact. There is no swelling or effusion. There is a well-healed incision to the anterior left knee and well-healed portals to the right knee. There is tenderness along the medial joint line on the left with no ten; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 09/01/2015; There has been treatment or conservative therapy.; Bilateral knee pain and tricompartmental arthritis; Tylenol

BIOMET PROTOCOL (OXFORD) - LEFT KNEE; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; This study is not being ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

Enter answer here - or Type In Unknown If No Info Given PATIENT WITH BILATERAL KNEE PAIN HAVING DIFFICULTY WALKING; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; It is not known if there has been any treatment or conservative therapy.;

Fell off Ladder and landed Directly on Left Shoulder and Left Knee. Immediate pain after falling.; This study is being ordered for trauma or injury.; 12/25/2015; There has not been any treatment or conservative therapy.; Pain and swelling in Left Shoulder and Left Knee

had injury in Dec 2014, eval for ACL tear, plan for surgical intervention; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

his patient comes in today for evaluation. She resumed her activity and continues with significant pain in her foot and ankle. The grinding appears to involve the extensor hallucis longus and may just be coincidental. Her pain is over the anterior ankle; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; May 2015; There has been treatment or conservative therapy.; It interferes with her activity. She's had a grinding sensation which is palpable and audible for this length of time. No history of any injury; I plan to put her in a boot walker and on a Medrol Dosepak. We will see her back in a week. Knee pain and subluxation-Failed conservative treatment.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

knee pain for several years with locking and instability. exam finds tenderness, effusion, patella crepitance, positive McMurray; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

Left Knee Examination Brief Exam; Skin: There are no abrasions, contusions, or erythema. ; Gait: Antalgic gait pattern. ; Inspection: Inspection of the knee reveals no swelling, ecchymosis or deformity. ; Palpation: There is moderate tenderness along the m; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

LITTLE RELIEF FROM THERAPY; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 10/12/2013; There has been treatment or conservative therapy.; PAIN; PT OTC MEDICATION

Ms. Carter is a 24-year-old Caucasian female who presents today after having experienced a dislocation of her patella. She was seen in the ER and they recommended a brace as well as crutches and they provided her with some pain medication. She describes; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.

No evidence of fracture or pathology on x-ray, and doctor is looking for a meniscal pathology on the right knee and a ligament on the left knee.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Unknown; There has been treatment or conservative therapy.; Significant swelling in both knees, left knee has tendency to hyperextend, mechanical symptoms in right knee, has peroneal nerve palsy in left leg and instability in left knee, tender to palpitation in right knee, walks with a cane, wears a left AFO.; AFO, cane, NSAIDs.

On going ankle pain for 4 plus months, limited ROM, swelling, she has failed therapy and steroid injections as well as anti inflammatories.; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury. osteoarthritis, left knee pain constant effusion possible derangement; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is not from a recent injury, old injury, chronic pain or a mass.

PAIN IN FOOT THAT STARTED END OF AUGUST . HAS BEEN IN BOOTWALKER , NSAIDS, ICE, HOME EXERCISES. NOTHING HAS HELPED PAIN . STARTED AFTER SHE HAD HER BABY AND STARTED RUNNING AGAIN .; This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for acute pain. pain in right thigh, and steroid injection, had an ice pack emergency room do to pain, limited range of motion, tenderness, unexplained server pain, medication given still in pain; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

pain in the knee for 10 months Ibuprofen 800 was taken.stairs and squatting makes it worse.; This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The results of the plain films is not known.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days; Yes, patient has completed and failed a course of conservative treatment.; There is conservative treatment other than physical Therapy, physician directed course of non-steroidal medications, Immobilization or Physical directed exercise. patella instability r/o meniscal tear  internal derangement; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

Patient got hit by a car when she was 10 years old and the left leg is longer than the right. Patient has 92 pins in leg.; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; There is no symptom of locking, Instability, Swelling, Redness, Limited range of motion or pain.

Patient has a formed body in the knee, mass is 3.5 centimeter. Patient has swelling and arrhythmia and tenderness at the lateral patella, has crepitus, pain in range of motion; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a known mass.; The diagnosis of Mass, Tumor, or Cancer has not been established.; The patient has had recent plain films, bone scan or ultrasound of the knee.; The imaging studies were not abnormal

Patient has a suspected medial meniscus tear.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

patient has had knee pain for several weeks, limited range of motion, positive McMurray signs, tenderness, degenerative medial meniscus tear; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has not directed conservative treatment for the past 6 weeks.

Patient has taken Diclofenac for the pain along with Tylenol daily. Xray's show a very large lateral femoral condyle osteophyte that appears to be protruding inferiorly toward the joint line and laterally with mild joint space narrowing.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; It is not known if the physician has directed a home exercise program for at least 6 weeks.; The patient received oral analgesics.

PATIENT PLAYS SPORTS CONSISTENTLY. SINCE THERE IS A MASS THE PHYSICIAN WANTS TO LOOK AT THE THIGH AND HIP, TO HELP DETERMINE WHAT TREATMENT, WHETHER SURGICAL OR NON SURGICAL, TO PURSUE.; This study is being ordered for trauma or injury.; 11/06/2015; There has been treatment or conservative therapy.; POPPING AND BRUISING WHEN HE HAD A HAMSTRING TEAR. ALSO HAS A PALPABLE LUMP AND DEFECT IN THE PROXIMAL THIGH. EXAM OF THE LEFT LEG SHOWS A PALPABLE DEFECT AT THE PROXIMAL HAMSTRING WHEN HE DOES RESISTED KNEE FLEXION. THERE IS A FIRM MASS CONSISTENT WITH A; HE HAS LIMITED ROM AND AT TIMES CANNOT PLAY SPORTS. HAS HAD A PREVIOUS ACL SURGERY IN 2009. HE RUNS, ALSO, AND HAS NOT BEEN ABLE TO DO THAT. HAS TAKEN IBUPROFEN AND USED ICE AND REST.

Patient presents today with left knee pain for the last month. She does not run for a specific history of trauma. She has had no previous symptoms. She complains of pain and mechanical symptoms. Left knee shows no swelling or deformity. She does have a mild; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has not directed conservative treatment for the past 6 weeks.

Possible meniscus tear; 35-year-old male with right knee pain, concern for lateral meniscus tear. I discussed this with the patient. Given his history and clinical exam, I feel that advanced imaging is warranted. I ordered MRI of his right knee to evaluate; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

Possible meniscus tear; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has not directed conservative treatment for the past 6 weeks.

post op surgery in August.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; It is not known if the physician has directed conservative treatment for the past 6 weeks.

posterolateral tenderness at the tibia/fibula joint. Pain present for about 1 month, before that she had occasional knee pain, but not anything severe. She did not have an injury or accident that caused this to flare up. X-ray showed moderated tricompartment; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.

pre-operative planning; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 5/2014; There has been treatment or conservative therapy.; r/o tears; injections and medications

Pt had an accident on his moped and dislocated the pattella; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

pt has 3 previous mri request. but he has NOT had an mri. he has been sent to our ortho and he has requested this study.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

pt has aching and sharp pain in the right knee, no definite injury; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is not from a recent injury, old injury, chronic pain or a mass.

pt has an effusion. positive patella grind test. positive lateral mcmurrays test. positive lateral joint line tenderness. has been thru physical therapy and taking Celebrex. not any better; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

Pt has marked tenderness along the medial joint line and lateral joint line tenderness. Since pt has not responded to conservative measures there could be a meniscus tear medially or/and laterally; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

Pt is a 64 years old Female with RIGHT knee pain for several years. The pain began after no specific injury. The pain is described as sharp, achy pain intermittently at 7 out of 10 in severity. The pain is worse with standing and walking and better with; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

Quality: aching; gnawing; stabbing; throbbing; constant  Severity: moderate  Duration: 3 years; continuous since onset  Timing: gradual  Context: cannot identify; overuse  Alleviating Factors: nothing helps  Aggravating Factors: lifting; carrying; t; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; HER KNEES HAVE BEEN HURTING HER FOR YEARS NOT SPECIFIC DATE! General Radiographic Findings: subchondral cysts medial femoral condyle, subchondral cysts medial tibial plateau, and osteophytes lateral tibial plateau.; There has been treatment or conservative therapy.; pain on initiation of movement and at extreme limited range and crepitus, weakness, joint line tenderness; PHYSICAL THERAPY DIDNT HELP AND REST ICE NSAID DO NOT HELP

questioning bil knee meniscus tears; This study is being ordered for trauma or injury.; 4 years ago twisted her knees; There has been treatment or conservative therapy.; knee pain, swelling, pain with ROM and running and up and down movement; Therapy , injection and anti inflamm medication

right knee subluxation/dislocation 4 times, swelling, pain 7/10. Buckling and a fall 1 week ago. + McMurrays; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

Rule out medial meniscal tear and/or lateral meniscal tear versus other internal derangement for surgical indication.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has not directed conservative treatment for the past 6 weeks.

She states she has been having chronic pain for 2 years. She reports instability about the knee at random times, but mostly at night. She states that her "knee shifts" when she is changing positions. At this time she reports intense 8/10 pain when climbing stairs; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is not from a recent injury, old injury, chronic pain or a mass.

She states that she is still having quite a bit of knee pain. She states that physical therapy has helped some, but she still has a lot of anterior knee pain. She has had pain for several years. She finds that her kneecap popped out of place. The brace; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days

Significant prominence tibial tubercle is noted. X-rays of the right knee show the Osgood-Schlatter problem. There appears to be a free bony ossicle posterior to the tubercle. Osgood Schlatter disease right knee. We need to obtain an MRI scan of the right knee; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient has not completed 6 weeks or more of Chiropractic care.; The physician has not directed a home exercise program for at least 6 weeks.; Ibuprofen; The patient received medication other than joint injections(s) or oral analgesics.

Simple walking three to four days ago, developed sudden medial pain in his left knee with a popping sensation. He has been limping and unable to straighten his knee fully since then. Left knee has trace effusion. It is quite tender along the medial and; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.

tender of joint, Lisfranc fracture, highly suspicious; The patient has not had a recent bone scan.; This is a request for a foot MRI.; The study is being ordered for suspected fracture.; They did not have 2 normal xrays at least 3 weeks apart that did not show a fracture.

The knees are examined in detail. She does have some mild retropatellar crepitus. A midline tracking patella is noted. There is a strong positive medial McMurray's of the bilateral knees and a positive medial Apley's of the bilateral knees. She has a ; This study is being ordered for trauma or injury.; APPROX 08/2015; There has been treatment or conservative therapy.; She describes it as a tearing type sensation and a sharp pain in the medial side of both of her knees. She describes a popping and clicking and sometimes giving way. This has been going on for over two months. She takes some meloxicam and this has not ; HAS BEEN ON MELOXICAM

The problem is the result of a previous surgery. Onset date: 2007. Left knee arthroscopy in 2007 in Texas.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is not from a recent injury, old injury, chronic pain or a mass.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; Surgery or other intervention is planned in the next 4 weeks.; The study is being oordered for infection.; There are physical exam findings, laboratory results, other imaging including bone scan or plain film confirming infection, inflammation and or aseptic necrosis.

This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for chronic pain.; The patient has had foot pain for over 4 weeks.; The patient has been treated with a protective boot for at least 6 weeks.

This is a request for a Knee MRI.; It is not known if the study is ordered prior to arthroscopic surgery.; It is not known if the study is for pre-operative planning.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Instability

This is a request for a Knee MRI.; No, the patient did not have a recent ultrasound of the knee.; The patient has not had a recent bone scan.; The plain films were normal.; There are documented physical or laboratory findings of a joint infection.; KNEE IS SWOLLEN, PUNCTURE WOUND FROM CHICKEN,; Known or Suspected Joint Infection
This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Instability

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Limited range of motion

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Locking

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Swelling greater than 3 days

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Post-operative Evaluation

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Suspected meniscus, tendon, or ligament injury

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; There is no suspected meniscus, pre-op or post-op evaluation, non-acute Chronic Pain, suspected tumor or Aseptic Necrosis; Instability

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; There is no suspected meniscus, pre-op or post-op evaluation, non-acute Chronic Pain, suspected tumor or Aseptic Necrosis; Limited range of motion

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; There is no suspected meniscus,pre-op or post-op evaluation,non-acute Chronic Pain,supsected tumor or Aseptic Necrosis; Swelling greater than 3 days

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Locking; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Instability

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Limited range of motion

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Locking

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Swelling greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; It is not known if the study is ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; The ordering physician is an orthopedist.; There is no suspected meniscus,pre-op or post-op evaluation,non-acute Chronic Pain,supsected tumor or Aseptic Necrosis; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were normal.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; It is not known if there is a known trauma involving the knee.; Pain greater than 3 days; It is not known if the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; This study is not being ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Pain greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The results of the plain films is not known.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days; Yes, patient has completed and failed a course of conservative treatment.; Physician directed course of non-steroidal anti-inflammatory medications

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The results of the plain films is not known.; The ordering physician is an orthopedist.; There is no suspected meniscus,pre-op or post-op evaluation,non-acute Chronic Pain,suspected tumor or Aseptic Necrosis; Pain greater than 3 days; Yes, patient has completed and failed a course of conservative treatment.; Physical Therapy

This is a request for a Knee MRI.; The study is not requested for knee pain.; The study is for a mass, tumor or cancer.; The diagnosis of Mass, Tumor, or Cancer has been established.; The study is requested for staging.

This is a request for a Knee MRI.; The study is not requested for knee pain.; The study is for a mass, tumor or cancer.; The diagnosis of Mass, Tumor, or Cancer has not been established.; The patient has had recent plain films, bone scan or ultrasound of the knee.; The imaging studies were abnormal.

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is scheduled in the next 4 weeks.

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient received joint injection(s).

This is a request for a Knee MRI.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Instability
This is a request for a Knee MRI.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Limited range of motion

This is a request for a Knee MRI.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Locking
This is a request for a Knee MRI.; This study is being ordered prior to arthroscopic surgery.; The ordering physician is an orthopedist.; Pre-operative Evaluation; Swelling greater than 3 days

This is a request for a Knee MRI.; This study is not being ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Limited range of motion

This is a request for a Knee MRI.; This study is not being ordered prior to arthroscopic surgery.; "This study is being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Swelling greater than 3 days

This is a request for a Knee MRI.; This study is not being ordered prior to arthroscopic surgery.; "This study is not being ordered prior to a planned or scheduled open surgery (joint replacement, etc.)."; The ordering physician is an orthopedist.; Pre-operative Evaluation; Instability

This is a request for a lower extremity MRI.; There is a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is a suspicion of an infection.; The patient is not taking antibiotics.; This is a study for a fracture which does not show healing (non-union fracture).

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; There is not a suspected tarsal coalition.; The patient does not have a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient has a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient has a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

Treatment Plan:   Patient is unable to take oral NSAIDs secondary to gastric upset. SHe has seen no improvement with other conservative treatments including rest, HEP, and massage. Patient would be a candidate for arthroscopic surgery depending on the MR; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthrscopy is not scheduled in the next 4 weeks. Tried steroid injections with no relief. stiffness on right knee and knee feels instable intermittl. knee pain worse with weightbearing and started gradually. worsens wth extended activity and is increased by stairs.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is not from a recent injury, old injury, chronic pain or a mass.

unknown; This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The results of the plain films is not known.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Pain greater than 3 days; It is not known if patient has completed and failed a course of conservative treatment.

unknown; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; It is not know if surgery or arthroscopy is scheduled in the next 4 weeks.

Unknown; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; There is a suspicion of a meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.

unknown; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

unknown; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Dec 2, 2013; There has been treatment or conservative therapy.; Chronic knee pain; physical therapy and anti inflammatory meds

; This is a requests for a hip MRI.; The member has not failed a 4 week course of conservative management in the past 3 months.; The hip pain is chronic.; The request is for hip pain.

pain in right thigh, and steroid injection, had an ice pack emergency room do to pain, limited range of motion, tenderness, unexplained server pain, medication given still in pain; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

PATIENT HAS SEVERAL PROBLEMS,INCLUDING HIP AND KNEE PAIN.HIS KNEE PAIN CAUSES HIS DISCOMFORT WHEN HE WORKS, WHICH IS A JOB OF KNEELING ON FLOORS. THE HIP PAIN IS WORSE WITH ROTATION. THE PHYSICIAN WOULD LIKE TO RULE OUT A LABRAL TEAR AND A POSSIBLE MENISC; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; OCTOBER 15,2015; There has been treatment or conservative therapy.; PAIN WHEN KNEELING, WHICH IS WHAT HE DOES IN HIS PRIMARY JOB, HE FEELS A CATCH IN THE KNEE WHERE THE KNEES FEELS HUNG UP. HE ALSO FEELS A POP WHICH HAS BEEN GOING ON FOR SEVERAL MONTHS.HIS HIP PAIN IS WORSE WITH ROTATION, AND HE HAS PAIN WITH ADDUCTION AND; HE TAKES MOBIC,HE KNEELS A LOT DOING FLOORS FOR A LIVING, AND HE HAS HAD TO DEAL WITH THAT. THE PHYSICIAN THINKS THE MECHANICAL SYMPTOMS HE DESCRIBES COULD BE MENISCAL IN ORIGIN.

This is a request for a hip MRI.; The member has failed a 4 week course of conservative management in the past 3 months.; The hip pain is chronic.; The request is for hip pain.

This is a request for a hip MRI.; There is a suspicion of fracture not adequately determined by x-ray.; Tendon or ligament injury is not suspected.; The hip pain is due to a recent injury.; The request is for hip pain.

This is a request for a hip MRI.; This study is being ordered in conjunction with a pelvic MRI.; "There is no history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is receiving long-term steriod therapy (Prednisone or Cortisone).

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.; The patient is receiving long-term steriod therapy (Prednisone or Cortisone).

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is a mass near the hip.; The patient does not have a documented limitation of their range of motion.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is receiving long-term steroid therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient does not have a documented limitation of their range of motion.

This is a request for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is receiving long-term steroid therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

unknown.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 4/2015; It is not known if there has been any treatment or conservative therapy.; In April he developed a problem of severe pain & high fever, an accurate anatomic diagnosis was never made. He has bilateral posterior and lateral hip pain. want to rule out microtrabecular fractures in his femoral heads. X-rays show he does have avascular

x-rays showed avascular necrosis of the hips; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; about a year ago; There has not been any treatment or conservative therapy.; bilateral hip pain

MRI OF THE YEAR SHOWS SMALL EFFUSIONS, GREATER ON THE RIGHT THAN ON THE LEFT. THERE IS MARROW EDEMA IN THE NECK OF THE RIGHT FEMUR AND MILD SUBPERIOSTEAL ELEVATION OR THICKENING SUGGESTED WITH SUBPERIOSTEAL FLUID SUGGESTED OF THE RIGHT FEMUR. MILD BOWING; This study is being ordered for Inflammatory/ Infectious Disease.; 11.15.15 PLAYING BASEBALL; There has been treatment or conservative therapy.; PAIN WHEN PLAYING BASEBALL AND FOOTBALL, PATIENT SAYING ABOUT THE ONLY THING THAT MAKES IT FEEL BETTER IS NO MOVEMENT.; CHANGE IN DAILY ACTIVITIES SUCH AS NOT BEING ABLE TO PLAY SPORTS AS MUCH, ALSO TAKING CELEBREX

PREOPERATIVE WORK FOR SPINE SURGERY; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/9/2015; There has been treatment or conservative therapy.; Scoliosis; Physical therapy and medications

pt is having severe headaches and falling; This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

Chronic Pain, Cervicalgia.; "This is a request for orbit, face, or neck soft tissue MRI.239.8"; The reason for the study is not for trauma, infection, cancer, mass, tumor, pre or post-operative evaluation

Her complaint is pain in the base of her neck, into the periscapular region, with pain down the left arm, across the triceps, and into her hand. She relates it involves all of her fingers equally. Her main pain is at the neck in the trapezial region, but; "This is a request for orbit, face, or neck soft tissue MRI.239.8"; The reason for the study is not for trauma, infection, cancer, mass, tumor, pre or post-operative evaluation

NSAIDS/ numbness/no improvements after medication and therapy; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more then once for these symptoms.; The physician has not directed conservative treatment for the past 6 weeks.

Radiology Services Denied Not Medically Necessary

pain is listed as 8/10; pain with flexion; numbness and tingling in entire right hand; diminished cervical range of motion; spurling to right; xray reveal - grade 1 inertial listhesis at C3 and C4 C7 and C1; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness with grip; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

Radiology Services Denied Not Medically Necessary

Patient has new onset of cervical spine neurological deficits that need to be evaluated.; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; It is not known if the patient has new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.; Patient has developed a pain in the left side of her neck, after receiving her first epidural steroid injection, when she turns her head. Numbness of both legs intermittently and of the hands and distal feet. Neck pain in trapezius. Tenderness of the post

Radiology Services Denied Not Medically Necessary

Patient's x-ray showed loss of cervical four doses, right arm pain.; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

Radiology Services Denied Not Medically Necessary

ruling out nerve root compression syndrome; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; marked stiffness in the cervical spine. she has marked pain and limited motion in the neck. X-rays show reversal of normal lordotic curve and disc space narrowing at multiple levels.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

Radiology Services Denied Not Medically Necessary

Shoulder has full range of motion. She has tenderness in the paracervical region and tenderness in the periscapular region and into the trapezial muscle. Motor, sensory, reflex, and vascular exams are intact, but she complains of pain across the triceps; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Weakness in the neck and going down the arms.; Pain in the base of her neck, into the periscapular region, with pain down the left arm, across the triceps, and into her hand. She relates it involves all of her fingers equally. Her main pain is at the ne; It is not known if the patient has new signs or symptoms of bladder or bowel dysfunction.; It is not known if there is x-ray evidence of a recent cervical spine fracture.

Radiology Services Denied Not Medically Necessary

The MRI's are medically necessary to treat the pt. He has failed over 6 weeks of conservative care and continues have pain.; This study is being ordered for trauma or injury.; initially started in 2003; There has been treatment or conservative therapy.; persistant radicular pain, paresthesia, muscle weakness, pain in the bilateral neck, right shoulder and right arm; Conservative care to include nonsteriodal anti-inflammatory medication, spinal exercises, and joint injections. patient has failed over 6 weeks of conservative care.

Radiology Services Denied Not Medically Necessary

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

Radiology Services Denied Not Medically Necessary

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; It is not known if there has been a supervised trial of conservative management for at least six weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; No, this patient did not have a recent course of supervised physical Therapy.

Radiology Services Denied Not Medically Necessary

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; Neurological deficits; ; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; None of the above; Cervical Spine Examination Brief Exam; Skin: There are no abrasions, contusions, or erythema. ; Gait: ; Inspection: Normal alignment. ; Palpation: No tenderness at the midline. ; Range of Motion: Normal range of motion. ; Strength: Normal motor strength t; No, the patient is not experiencing or presenting new symptoms of upper extremity weakness?; No, the patient is not demonstrating unilateral muscle wasting.; No, the patient is not experiencing or presenting new symptoms of Bowel or bladder dysfunction.; No, the patient is not experiencing new onset of parathesia diagnosed by a neurologist; No, the patient is not experiencing or presenting x-ray evidence of a recent fracture.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; pt is undergoing pt now for her upper back and neck pain

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; patient c/o neck pain, x-rays done show status post C5-C6 fusion with osteophytes anterior to C6-C7 and C4-C5

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.;

Radiology Services Denied Not Medically Necessary

unknown.; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; patient is having weakness in left arm and hand and reflexes are absent in the left upper extremity, tender at ulnar nerve and pain is rated as 8 out of 10 and x rays showed degenerative disease and the c5 and c6 and c7.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

Radiology Services Denied Not Medically Necessary

x rays of the c spine showed narrowing of c4-c6 disk narrowing and arthrosis with canal narrowing. x-rays of the right shoulder were negative. persistent pain and swelling not responding to conservative therapy and persistent pain with radiculopathy.; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; neck flexion decreased.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture. ; This is a request for a thoracic spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has not seen the doctor more then once for these symptoms.

Radiology Services Denied Not Medically Necessary

Mr Schichtl had an injury many years ago. He does have some signs of sciatica and some ischial and trochanteric bursitis. He does have distinct weakness in the a.m. Dr.. I am not sure whether he had abduct sure tendon rupture of some sort. I have discusse; This study is being ordered for trauma or injury.; 25 years ago; There has not been any treatment or conservative therapy.; limp, some pain over the side of his hip region lateral. pain in his ischium. pain that goes down his leg all the way to his foot. some numbness down leg. recently pain preventing him from walking as much. dull aching type pain

Radiology Services Denied Not Medically Necessary

neck pain w bilat arm pain and numbness lbp w bilat leg pain and numbness; This study is being ordered for a neurological disorder.; several months; There has been treatment or conservative therapy.; neck pain w bilat arm pain and numbness lbp w bilat leg pain and numbness; nsaid and activity modification

Radiology Services Denied Not Medically Necessary

Neurological Sensory Testing: Decreased right S1 and bilateral L5  Sitting straight leg raising Positive on the right    X-ray: AP and lateral x-rays lumbar spine was brought down shows mild osteophytes of a lumbar segments except a one has joint s; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; patient is experiencing weakness and numbness in the limbs.The pain radiates down both of her legs with numbness and tingling.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

none; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has not seen the doctor more then once for these symptoms.

Radiology Services Denied Not Medically Necessary

Pain is radiating from back to the lower extremities globally and bilaterally. Activity increases pain; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has not seen the doctor more than once for these symptoms.

Radiology Services Denied Not Medically Necessary

pain is severe and rather constant periods worse with activity. She works in daycare with 3-year-old but she says she cannot really do that right now because her pain is so bad.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

PATIENT BEGAN HAVING PAIN APPROXIMATELY 3-4 WEEKS AGO. IT IS OF INSIDIOUS ONSET, NO TRAUMA. SHE WALKS WITH A LIMP, WALKING AND LYING ON LEFT SIDE MAKES PAIN WORSE, AND ELEVATING LEG MAKES IT BETTER SOMETIMES. SHE TAKES TRAMADOL,NAPRXEN AND ASPRIN FOR PAIN; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has not seen the doctor more than once for these symptoms.

Radiology Services Denied Not Medically Necessary

PATIENT HAS BEEN HAVING PAIN IN BOTH BUTTOCK AREAS ON THE RIGHT. IT EXTENDS DOWN PAST HER KNEES AND SOMETIMES IT IS SEVERE. VERY TENDER OVER THE SCIATIC NERVE, LEFT MORE THAN RIGHT, ALTHOUGH SHE SAYS THE RIGHT WILL EXTEND DOWN HER FOOT AND ANKLE AND SOM; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

Patient is having persistent low back pain d/t injury 4-5 months ago. Pain radiates down left leg with weakness and difficulty with ambulation. Treated with NSAIDs and at home exercise program per Family Physician.; The study requested is a Lumbar Spine MRI.; Trauma or recent injury; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

Patient with chronic low back pain and right lower extremity symptoms. An EMG shows possible nerve root irritation nerve root right side as well as peripheral neuropathy.; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more then once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; It is not known if the patient has completed 6 weeks or more of Chiropractic care.; It is not known if the physician has directed a home exercise program for at least 6 weeks.

Radiology Services Denied Not Medically Necessary

Patient with low back pain but pain radiates down the left lower extremity which she describes as shooting in nature going to the left heel; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; It is not know if the patient has seen the doctor more then once for these symptoms.

Radiology Services Denied Not Medically Necessary

POSSIBLE LUMBAR STENOSIS; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; WEEKNESS AND NUMBNESS AND TINGLING DOWN BOTH LOWER EXTREMITIES. HE CANNOT WALK FOR EXTENDED PERIODS BECAUSE OF IT. IT IS AFFECTING HIS DAILY LIVING ACTIVITIES.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

pt has been sent to PT since the last office visit.; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Radiology Services Denied Not Medically Necessary

MRI OF THE YEAR SHOWS SMALL EFFUSIONS,G REATER ON THE RIGHT THAN ON THE LEFT. THERE IS MARROW EDEMA IN THE NECK OF THE RIGHT FEMUR AND MILD SUBPERIOSTEAL ELEVATION OR THICKENING SUGGESTED WITH SUBPERIOSTEAL FLUID SUGGESTED OF THE RIGHT FEMUR.MILD BOWING ; This study is being ordered for Inflammatory/ Infectious Disease.; 11.15.15 PLAYING BASEBALL; There has been treatment or conservative therapy.; PAIN WHEN PLAYING BASEBALL AND FOOTBALL, PATIENT SAYING ABOUT THE ONLY THING THAT MAKES IT FEEL BETTER IS NO MOVEMENT.; CHANGE IN DAILY ACTIVITIES SUCH AS NOT BEING ABLE TO PLAY SPORTS AS MUCH, ALSO TAKING CELEBREX

Radiology Services Denied Not Medically Necessary

pain in right thigh, and steroid injection, had an ice pack emergency room do to pain, limited range of motion, tenderness, unexplained server pain, medication given still in pain; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Radiology Services Denied Not Medically Necessary

Patient has continued difficulty walking for 4-5 months after injury. Has been treated with NSAIDs and at home exercise program with no relief.; This is a requests for a hip MRI.; Surgery or arthrscopy is not scheduled in the next 4 weeks.; There is a suspicion of tendon or ligament injury.; The hip pain is due to a recent injury.; The request is for hip pain.

PATIENT HAS MANY THINGS GOING ON. POSSIBLY HAS A CAM IMPINGEMENT IN HIS HIP AND PROBABLY LABRAL TEAR. DEFINITELY HAS CHRONIC PREPATELLAR BUTSITIS ON THE LEFT FROM HIS KNEELING ON HARD FLOORS, BUT THE MECHANICAL SYMPTOMS THAT HE DESCRIBED COULD POSSIBLY BE; This study is being ordered for a neurological disorder.; AROUND SEPTEMBER 2015, HE BEGAN HAVING SEVERE HIP AND KNEE PAIN. XR DO REVEAL SOME ABNORMALITIES INCLUDING A CAM SHAPED FEMORAL HEAD ON THE LEFT WITH A SMALL CYST AT THE RIM OF THE ACETABULUM THAT IS LIKELY CONSISTENT WITH INTERNAL IMPINGEMENT OF THE HIP; There has been treatment or conservative therapy.; LEFT HIP PAIN WHEN HE SITS INDIAN STYLE. OCCASIONAL NUMBNESS IN THE LEFT FOOT. HE DOES HAVE PAIN IN THE LEFT HIP WHEN HE SQUATS, AND HE HAS TO STAND ON CONCRETE A LOT. PATIENT DESCRIBES A 'CATCH' IN THE KNEE AND THAT THE KNEE FEELS 'HUNG UP'. HIP PAIN IS W; PATIENT HAS HAD CHANGE IN ACTIVITY, AS SITTING AND KNEELING ON FLOORS CAUSES HIM PAIN. TRIED CELEBREX WITHOUT SUCCESS. CURRENTLY IS ON MOBIC AND HAS TRIED ULTRAM. THE PHYSICIAN WANTS AN MRI ARTHROGRAM TO SEE IF HE HAS A LABRAL TEAR AND AN MRI OF THE LEFT

Radiology Services Denied Not Medically Necessary

Pt has metal on metal joints as well dislocation of the left hip. Patient cannot have any quality of movement or just moving to walk; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; August 2015; There has been treatment or conservative therapy.; Pain in hips radiating down legs. aching and sharp pains exacerbated by bending, lifting, squatting, standing, twisting and pushing. pain is getting worse in both hips; Pt has had several steroid injections in the hips but no permanent relief. Physical therapy did not help and medications temporarily helps but not much

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steriod therapy (Prednisone or Cortisone).; The patient had an abnormal plain film study of the hip other than arthritis.; The patient has a documented limitation of their range of motion.

Radiology Services Denied Not Medically Necessary

patient pain has progressively worsen and tingling in the low back, feel piecing pain in the abdomen and pain to the groing area and has effected urinaition output.; This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is not a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.

Radiology Services Denied Not Medically Necessary

; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Marcus is a 44 year old male with history of moderately severe right groin pain who is being evaluated for that and returns after MR arthrogram and lab for further counseling and therapeutic plans.   Previously whole body scan performed on 8-4-15 did no

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; pt having hip pain, groin pain for several mths. eval left hip flexor strain. pt has had ns aids, PT, and conservative treatment w no improvement.

Radiology Services Denied Not Medically Necessary

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is not experiencing symptoms of radiculopathy for six weeks or more.; There is no neurologic symptoms of bowel or urinary bladder dysfunction.; There is no suspicion of lumbar spine infection.; There is no suspicion of lumbar spine neoplasm or tumor or metastasis.

This is a request for a temporomandibular joint MRI.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

"This request is for face, jaw, mandible CT.239.8"; "There is a history of serious facial bone or skull, trauma or injury.fct"

"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is not a suspicion of neoplasm, tumor or metastasis.fct"; "There is suspicion of bone infection, [osteomyelitis].fct"

"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is suspicion of neoplasm, tumor or metastasis.fct"

infection in mouth/throat; This study is being ordered for Inflammatory/ Infectious Disease.; about a week ago; There has been treatment or conservative therapy.; can't swallow; abx & she went into

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is no suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is a suspicion of an infection or abscess.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 1/1/2015; There has not been any treatment or conservative therapy.; cough, wheezing, chest pain, irregular heartbeat.

Temporal HA , Arm numbness, Pt has HTN and DM; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 1/1/2015; There has not been any treatment or conservative therapy.; cough, wheezing, chest pain, irregular heartbeat. A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

chronic mechanical lbp; neurogenic claudication with rt L5/S1 radiculopathy; has disc degeneration; positive straight leg raise test; positive slump test; lumbar radiculopathy; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness and unsteady gait; falls while walking; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; The patient does have a new foot drop.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality
The pain is from a known mass.; The diagnosis of Mass, Tumor, or Cancer has been established.; The study is requested for staging.; This request is for a wrist MRI.; This study is requested for evaluation of wrist pain.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

As mentioned before, She is having pain in that knee and is not getting better with PT.; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; It is not known if there is a known trauma involving the knee.; Pain greater than 3 days; Yes, the member experience a painful popping, snapping, or giving away of the knee.

knee contusion; This is a request for a Knee MRI.; It is not known if patient had recent plain films of the knee.; It is not known if the ordering physician is an orthopedist.; There is no suspected meniscus,pre-op or post-op evaluation,non-acute Chronic Pain,supsected tumor or Aseptic Necrosis; There is no symptom of locking,Instability, Swelling,Redness,Limited range of motion or pain.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Instability

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; There is no suspected meniscus,pre-op or post-op evaluation,non-acute Chronic Pain,supsected tumor or Aseptic Necrosis; Swelling greater than 3 days

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 1/1/2015; There has not been any treatment or conservative therapy.; cough, wheezing, chest pain, irregular heartbeat.

post op complication; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

This is a request for an abdomen-pelvis CT combination.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement

Previous MRI documented, extensive family history of heart disease, relatives death from massive heart attacks on maternal and paternal sides, sub sternal chest pain, from shoulder left and jaw, took nitro and was relieved. Takes baby aspirin, high blood ; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

infection in mouth/throat; This study is being ordered for Inflammatory/ Infectious Disease.; about a week ago; There has been treatment or conservative therapy.; can't swallow; abx & she went into

"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is not a suspicion of neoplasm, tumor or metastasis.fct"; "There is not a suspicion of bone infection, [osteomyelitis].fct"; This is a preoperative or recent postoperative evaluation.

; This study is not being ordered for trauma, tumor, sinusitis, osteomyelitis, pre operative or a post operative evaluation.; This is a request for a Sinus CT.

48 year old female with history of chronic sinusitis, continuous frontal and facial pressure, night time stuffy nose, excessive purulent PND in the mornings. She has headache with steroid nasal sprays. Swelling and pressure between eyes, ear pain & pressu; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

7 months ago the patient had right-sided Bell's palsy. That has almost completely resolved. She is left with facial pain and tenderness. She has a history of migraine and a history of allergic rhinitis and recurrent acute sinusitis. An MRI scan done 2 mon; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset AND the patient failed a course of antibiotic treatment

levaquin for 10 days; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; It is unknown if the patient is immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Lifelong hx of sinus infections; on antibiotics twice monthly; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; It is unknown if the patient is immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Multiple rounds of ANTI-BIOTICS, STEROIDS, ANTIHISTAMINE, SINUS PAIN AND PRESSURE AS WELL; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

nasal congestion; r facial pain incld cheek; 3 wk course of antibiotics; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

nasal polyps; This study is not being ordered for trauma, tumor, sinusitis, osteomyelitis, pre operative or a post operative evaluation.; This is a request for a Sinus CT.

None; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; It is unknown if the patient is immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Patient is 27 y/o WF with recurrent chronic rhinosinusitis. She has been treated with several antibiotics Amoxil, Augmentin, Zithromax, Doxycycline, Penicillin shot and steroid dose packs.; Has a history of allergies and she took allergy shots in past.; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Patient right recurrent facial swelling facial pain and pressure..post nasal drip and has been on steroid nasal drip; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset

Physician is trying to rule out a tumor.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

promoted maxillary crest, widening of the septum body bilaterally; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset

PT HAS A DEVIATED SEPTUM AND HAS LOSS HIS SENSE OF SMELL; This study is not being ordered for trauma, tumor, sinusitis, osteomyelitis, pre operative or a post operative evaluation.; This is a request for a Sinus CT.

pt is experiencing sinus pain and pressure and been taking amoxicillin for 10 days, steroid injections, flonase nasal spray, and Bactrim for 10 days.; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

spur on the right, unable to pass the 4 mm scope on either side, middle and inferior turbinates are enlarged; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

This study is being ordered for a known or suspected tumor.; This is a request for a Sinus CT.

This study is being ordered for follow-up to trauma.; This is a request for a Sinus CT.

This study is being ordered for post-operative evaluation.; This is a request for a Sinus CT.

This study is being ordered for pre-operative evaluation.; This is a request for a Sinus CT.

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; It is unknown if the patient is immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; It is unknown if the patient is immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is immune-compromised.

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

unable to pass 4 mm scope, widening of the septal body.; 25 year old female presents frontal headache, pain and pressure, orbital pain and pressure. Clear drainage all day, more obstruction on the left side. She has a "bad smell" from nose times 4 1/2 mon; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset unknown; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is immune-compromised.

Unknown; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset AND the patient failed a course of antibiotic treatment

unknown; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for neck soft tissue CT.; The patient has a neck lump or mass.; There is a palpable neck mass or lump.; The size of the neck mass is unknown.; The neck mass has been examined twice at least 30 days apart.; The lump did not get smaller.; A fine needle aspirate was NOT done.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for neck soft tissue CT.; The study is being ordered for something other than Trauma or other injury, Neck lump/mass, Known tumor or metastasis in the neck, suspicious infection/abcess or a pre-operative evaluation.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 09/2015; There has been treatment or conservative therapy.; Neck mass and lymphadenopathy, neck pain; Couple rounds of antibiotics; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

; This is a request for neck soft tissue CT.; The study is being ordered for something other than Trauma or other injury, Neck lump/mass, Known tumor or metastasis in the neck, suspicious infection/abcess or a pre-operative evaluation.

; This study is being ordered for a neurological disorder.; 12-8-2015; There has not been any treatment or conservative therapy.; numbness and tingling of the right arm I neck mass; antibiotics w/some improvment; painful eating and swallowing; This is a request for neck soft tissue CT.; Surgery is NOT scheduled within the next 30 days.; The patient has a suspicious infection or abscess.

oral mass, highly suspicious for malignancy and need to see if this mass extends beyond physical exam and if there are any other masses.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

POSSIBLE TUMOR; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

r/o CA; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This is a request for neck soft tissue CT.; It is unknown if there has been recent trauma or other injury to the neck.; There is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.

This is a request for neck soft tissue CT.; The study is being ordered for Initial Staging.; The patient has a known tumor or metastasis in the neck.

This is a request for neck soft tissue CT.; There has been recent trauma or other injury to the neck.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; It is unknown if there is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is a suspicion of an infection or abscess.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is no suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is a suspicion of an infection or abscess.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is no suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is not a suspicion of an infection or abscess.; This is being ordered by an ENT specialist.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

Unknowwn; This is a request for neck soft tissue CT.; The patient has NOT been diagnosed with cancer.; The patient has a neck lump or mass.; There is a palpable neck mass or lump.; The neck mass is larger than 1 cm.; A fine needle aspirate was done. Yes, this is a request for CT Angiography of the brain. infection of tracheostomy; This study is being ordered for trauma or injury.; NOV 2014; There has been treatment or conservative therapy.; throat hemorrhage reconstruction w/ new bleeding; took meds

"This is a request for orbit,face, or neck soft tissue MRI.239.8"; The study is ordered for suspicion of neoplasm, tumor or metatstasis

"This is a request for orbit,face, or neck soft tissue MRI.239.8"; The study is ordered for the evaluation of lymphadenopathy or mass

There is a suspicion of an infection or abscess.; This is a request for a Face MRI.; There is not a history of orbit or face trauma or injury.

There is a suspicion of an infection or abscess.; This is a request for an Orbit MRI.; There is not a history of orbit or face trauma or injury.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; It is not known if the patient had a normal audiogram.; The patient is experiencing hearing loss.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient is experiencing dizziness.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are not recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 1/1/2015; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; Medication and PT

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

doing the mri to r/o tumor had sudden onset of hearing loss in right ear the test came back as nerve and bone lost; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; It is not known if the tumor is a pituitary tumor or pituitary adenoma.

Grace M. Maddox is referred by Dr. Porter. Her reason for this visit is vertigo. Her problem has been present for 1 week. She describes the problem as moderate to severe. She describes the symptoms as feeling off balance. She has had the followi; This request is for a Brain MRI; It is unknown if the study is being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; Is is not known if the patient has a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.; The doctor does not note on exam that the patient has delirium or acute altered mental status.; The patient does not have a Brain CT showing abscess, brain infection, meningitis or encephalitis.

has acoustic neuroma on right side / vestibular schwannoma/ mile tinnitus; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; A metabolic work up was not done including urinalysis, electrolytes and complete blood count with results completed.; The patient is experiencing loss of smell.

hearing loss; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient had a normal audiogram.; The patient is experiencing hearing loss.

hearing lost; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Patient could not have CT, allergic to Dye.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; The patient does not have a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.); The doctor does not note on exam that the patient has delirium or acute altered mental status.; The patient does not have a Brain CT showing abscess, brain infection, meningitis or encephalitis.

patient has 3 year history of decrease of smell and want to R/O mass; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation, multiple sclerosis, or seizures; A metabolic work up was not done including urinalysis, electrolytes and complete blood count with results completed.; The patient is experiencing loss of smell.

patient is experiencing hearing loss and vertigo; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Pt has had vertigo since Sept and has changed to worse and constant. Is off balance and hearing has decreased since.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; It is not known if the tumor is a pituitary tumor or pituitary adenoma.

sudden onset of hearing loss , left ear , ringing in left ear , dizzy , fatigue; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient is experiencing dizziness.

The patient is a 43 year old female with multiple otolaryngic problems. She has a history of chronic rhinosinusitis and underwent a somewhat limited FESS in November 2011. Patient feels her polyp has returned on the right. She is not using saline irrigati; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation). This is a request for an Internal Auditory Canal MRI.; There is a suspected Acoustic Neuroma or tumor of the inner or middle ear.

This is a request for an Internal Auditory Canal MRI.; There is not a suspected Acoustic Neuroma or tumor of the inner or middle ear.; There is not a suspected cholesteatoma of the ear.; The patient has not had a recent brain CT or MRI within the last 90 days.; There are neurologic symptoms or deficits such as one-sided weakness, speech impairments, vision defects or sudden onset of severe dizziness.

This is a request for an Internal Auditory Canal MRI.; There is not a suspected Acoustic Neuroma or tumor of the inner or middle ear.; There is not a suspected cholesteatoma of the ear.; The patient has not had a recent brain CT or MRI within the last 90 days.; There are no neurologic symptoms or deficits such as one-sided weakness, speech impairments, vision defects or sudden onset of severe dizziness.; This is not a pre-operative evaluation for a known tumor of the middle or inner ear.

This pt has no sense of smell. She cannot smell rubbing alcohol when put under her nose. Dr. Marrero needs to check olfactory nerves/base of brain; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; It is not known if a metabolic work up was done including urinalysis, electrolytes and complete blood count with results completed.; The patient is experiencing loss of smell.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing dizziness.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing fatigue or malaise.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing vertigo

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient did not have a normal audiogram.; The patient is experiencing hearing loss.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; The patient has a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; The patient has hearing loss.; The patient had an audiogram.; The results of the audiogram were abnormal.; It is unknown why this study is being ordered.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for a tumor.

Unknown; This study is being ordered for a neurological disorder.; 10-15-2015; There has not been any treatment or conservative therapy.; Dizziness, vertigo, headache, neck pain, and ear pain

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 09/2015; There has been treatment or conservative therapy.; Neck mass and lymphadenopathy, neck pain; Couple rounds of antibiotics; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.

POSSIBLE TUMOR; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

No Info Given; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; No Info Given; It is not known if there has been any treatment or conservative therapy.; No Info Given

This study is to be part of a Myelogram.; This is a request for a Cervical Spine CT

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 1/1/2015; There has been treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; Medication and PT

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

No Info Given; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; No Info Given; It is not known if there has been any treatment or conservative therapy.; No Info Given

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; The patient is not presenting new symptoms.; The patient has had 3 or fewer follow-up abdomen MRIs.; This study is being ordered for follow-up.; The patient is not undergoing active treatment for cancer.; "The ordering physician is an oncologist, urologist, gastroenterologist, or surgeon."; The past MRI abdomen showed a 1.4 lesion on right lobe of the liver and the radiology report recommended a 3 month follow up to confirm stability and the exclude

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Head/Neck Cancer.; The patient does NOT have Thyroid or Brain cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Melanoma.; This is NOT for evaluation of regional lymph nodes.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; The patient does NOT have Thyroid or Brain cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; The patient does NOT have Thyroid or Brain cancer.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; The patient does NOT have Thyroid or Brain cancer.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Melanoma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 1 PET Scans has already been performed on this patient for this cancer.

dizziness; This study is being ordered for Inflammatory/ Infectious Disease.; 01/2015; There has been treatment or conservative therapy.; facial pain, chronic sinus infection, ringing in left ear, pain in ear;; antibiotics, and nasal spray

Radiology Services Denied Not Medically Necessary

This is a request for an Internal Auditory Canal CT.; There is not a suspected cholesteatoma of the ear.; The patient had a recent abnormal auditory brainstem response.; The patient has not had a recent abnormal brain CT or MRI.; There are neurological symptoms of one-sided hearing loss or sudden onset of ringing in 1 or both ears.; There is not a new and sudden onset of one-sided ear pain not improved by pain medications.; The patient has not had a normal brain CT or MRI.; There is a suspected Acoustic Neuroma or tumor of the inner or middle ear.; This is not a pre-operative evaluation for a known tumor of the middle or inner ear.

Radiology Services Denied Not Medically Necessary

; This study is not being ordered for trauma, tumor, sinusitis, osteomyelitis, pre operative or a post operative evaluation.; This is a request for a Sinus CT.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

dizziness; This study is being ordered for Inflammatory/ Infectious Disease.; 01/2015; There has been treatment or conservative therapy.; facial pain, chronic sinus infection, ringing in left ear, pain in ear,; antibiotics, and nasal spray

Radiology Services Denied Not Medically Necessary

Patient is 31 y/o WF with deviated nasal septum. She has a history of chronic sinusitis and is treated with antibiotics for years. Patient also has several allergies but had an reaction that required epipen and shots were stopped. She takes Benadryl, Clar; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Radiology Services Denied Not Medically Necessary

Pt has chronic recurrent sinusitis requiring 4+ antibiotics per year for the past several years. She get purulent drainage, facial pain and pressure; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

Radiology Services Denied Not Medically Necessary

Sinus Eval The patient is a 36 year old female kindly referred by Dr. Pope. Patient has had lifelong sinus problems that have become recurrent this year. She feels she has had a sinus infection that has not ever resolved. She has bilateral PND, rhinorrhe; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Radiology Services Denied Not Medically Necessary

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

Radiology Services Denied Not Medically Necessary

; This study is being ordered for a neurological disorder.; 05/20/2015; There has been treatment or conservative therapy.; Ear pain; MEDICATIONS

Radiology Services Denied Not Medically Necessary

; This study is being ordered for a neurological disorder.; 05/20/2015; There has been treatment or conservative therapy.; Ear pain; MEDICATIONS

Radiology Services Denied Not Medically Necessary

; This study is being ordered for a neurological disorder.; 12-8-2015; There has not been any treatment or conservative therapy.; numbness and tingling of the right arm
Rule out lower respiratory anomaly or disease verses a mass.; "Caller is NOT SURE if there is evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Radiology Services Denied Not Medically Necessary

infection of tracheostomy; This study is being ordered for trauma or injury.; NOV 2014; There has been treatment or conservative therapy.; throat hemorrhage reconstruction w/ new bleeding; took meds

Radiology Services Denied Not Medically Necessary

Unknown; This study is being ordered for a neurological disorder.; 10-15-2015; There has not been any treatment or conservative therapy.; Dizziness, vertigo, headache, neck pain, and ear pain

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Soft Tissue Sarcoma, Pancreatic or Testicular Cancer.

Radiology Services Denied Not Medically Necessary

glioblastoma, weakness, headache, nausea and vomiting.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

glioblastoma, weakness, headache, nausea and vomiting.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a brain/head CT.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.; chronic headaches; lab work

been having falling episodes and head injury has a shunt; This is a request for a brain/head CT.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

doctor wants to see if baby soft spot is close prematurely did x ray and came that a CT needs to be done; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

Neuro / Psychiatric Aphasia, dizziness, focal weakness, gait disturbance, lightheadedness, loss of consciousness and speech changes. Headache. Neuro Comments: light sensitive and trouble sleeping. pain has been constant now x 6 d, without much help fr; This study is being ordered for a neurological disorder.; 08/12/2015; There has been treatment or conservative therapy.; Reason for Study: Patient has history of Migraines with photophobia and sleep disturbance  1. Headache  Onset: 1 Week. Aggravating factors include bright lights. Pertinent negatives include vomiting. Patient has been having headaches for over ; Medications: 11/06/2015 IMITREX, 11/06/2015 TYLENOL-CODEINE NO.3,MAXALT,

This is a request for a brain/head CT.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.
This is a request for a brain/head CT.; The study is requested for Hydrocephalus or congenital abnormality.

This is a request for a brain/head CT.; The study is requested for known or suspected bleed such as subdural hematoma or subarachnoid bleed.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

This is a request for a brain/head CT.; There is not headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

"This request is for orbit,sella, int. auditory canal,temporal bone, mastoid, CT.239.8";
"There is not suspicion of bone infection, cholesteoma, or inflammatory disease.ostct";
"There is a history of serious head or skull, trauma or injury.ostct"

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.; chronic headaches; lab work

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is immune-compromised.

FOLLOW UP OF POSSIBLE NEUROFIBROMATOSIS TYPE 1; This study is being ordered for Congenital Anomaly.; 9/23/15; There has not been any treatment or conservative therapy.; 102 FEVER, MULTIPLE CAFE-AU-LAIT SPOTS ON BODY, 3-4 CM AREA OF ERYTHEMA ON HE DISTAL TIBIA

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; It is unknown if the study is being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; It is not known if the condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; It is not known if the tumor is a pituitary tumor or pituitary adenoma.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

.....; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; two weeks ago; There has not been any treatment or conservative therapy.; tingling and numbness ...back and r leg r arm

follow up every 3 months,; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

FOLLOW UP OF POSSIBLE NEUROFIBROMATOSIS TYPE 1; This study is being ordered for Congenital Anomaly.; 9/23/15; There has not been any treatment or conservative therapy.; 102 FEVER, MULTIPLE CAFE-AU-LAIT SPOTS ON BODY, 3-4 CM AREA OF ERYTHEMA ON HE DISTAL TIBIA

headaches and vomiting patient had concussion last year; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; It is not known if there is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Headaches, and pain in back of head 3 months.; This request is for a Brain MRI; It is unknown if the study is being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; It is not known if the condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; It is not known if a metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

memory loss; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

night awakenings, daily ha; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

Patient is suffering from severe headache and experiences bilateral arm pain associated with headache; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is not a new and sudden onset of a headache less than 1 week not improved by medications.; It is not known if there is a family history (parent, sibling, or child) of stroke, aneurysm, or AVM (arteriovenous malformation)

Pt has vomiting, headaches last 8 hrs, one side, and increasing severity and numbness.; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are not recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.; There is a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is not presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; This headache is not described as sudden, severe or chronic recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; It is not known if the patient has undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; The patient has a congenital abnormality.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has not undergone treatment for a congenital abnormality (such as hydrocephalus or craniosynostosis).; There are recent neurological symptoms or deficits such as one-sided weakness, speech impairments, or vision defects.; The patient has a congenital abnormality.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is a pituitary tumor or pituitary adenoma.; There are physical findings or laboratory values indicating abnormal pituitary hormone levels.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

unknown; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is not described as a “thunderclap” or the worst headache of the patient’s life.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor. This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

Unknown; This study is being ordered for a work-up of a suspicious mass.; Unknown if there is radiographic or physical evidence of a lung or chest mass.; This is a request for a chest MRI.

; This study is being ordered for trauma or injury.; 10/12/15; There has been treatment or conservative therapy.; Pain that goes to the left home. Pain that goes from the arm to the right leg.; Pain medications, muscle relaxers, and home exercise.

; This study is being ordered for trauma or injury.; 10/12/15; There has been treatment or conservative therapy.; Pain that goes to the left home. Pain that goes from the arm to the right leg.; Pain medications, muscle relaxers, and home exercise.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is experiencing symptoms of radiculopathy for six weeks or more.

.....; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; two weeks ago; There has not been any treatment or conservative therapy.; tingling and numbness ...back and r leg r arm

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >;

The patient does not have any neurological deficits.; The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for a thoracic spine MRI.; It is not known how many follow-up thoracic spine MRIs the patient has had.; There has not been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.; MEMBER WITH CHRONIC MID BACK PAIN FOR THE PAST 5 YEARS, SHE NOTES A KNOT IN HER MIDLINE MIDBACK

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal nerve study involving the lumbar spine Patient had CT abdomen and CT Pelvis was recommended; The patient has painful hematuria.; The patient has not had an IVP.; This study is being ordered due to hematuria.; This is a request for a Pelvis CT.

MRE TO EVALUATE SMALL BOWEL; This study is being ordered for Inflammatory/ Infectious Disease.; 8/17/2010; There has been treatment or conservative therapy.; SEVERE ABDOMINAL PAIN, LOWER QUADRANT BOTH IN THE RIGHT SIDE AND LEFT SIDE, ALSO HAS THE URGE TO STOOL, BUT HAS DIFFICULTY STOOLING,; PREDNISONE, METRONIDAZOLE, RANITIDINE, MERCAPTOPYRINE

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is suspicion of upper extremity bone or soft tissue infection.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered for suspicious mass/tumor/metastasis.; The patient has had recent plain films of the shoulder.; The plain films were not normal.

The requested study is a Shoulder MRI.; Study is being ordered for known/suspected joint infection.; The patient has not had a recent bone scan.; The patient has not had a recent ultrasound of the shoulder.; The plain films were normal.; There are no documented physical or laboratory findings of a joint infection.; PATIENTS PAIN HAS BEEN GOING ON FOR OVER A YEAR. IT IS GETTING UNBEARABLE.; The patient has not had a recent CT of the shoulder.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/10/2015; There has not been any treatment or conservative therapy.; Patient is experiencing pain in left leg and not able to walk, knee inflexion leads to crying.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 8/08/2014; There has not been any treatment or conservative therapy.; none

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Suspected meniscus, tendon, or ligament injury

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Swelling greater than 3 days

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Instability

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is not a mass near the hip.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.

TO LOOK FOR EROSION AND INFLAMMATORY DISEASE PROCESS, PRIOR TO THE CHANGE IN THE BIOLOGICAL MEDICATIONS.; This study is being ordered for Inflammatory/ Infectious Disease.; 03/12/2015; There has been treatment or conservative therapy.; WORSENING STIFFNESS, LIMITATION IN HIPS AND LOW BACK, PAIN.; EMBREL, ANTIBIOTICS,

bypass; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis
This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; Yes, this is a request for follow up to a known tumor or abdominal cancer.

This is a request for an Abdomen CT.; This study is being ordered for an infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; It is not known if the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; <Enter Additional Clinical Information>

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; N&V and upper gastric which shows obstruction and pain. This is a new MD. The other MD showed loss of 4 pounds in the last month. Scope showed delayed gastric emptying.

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases
This is a request for an abdomen-pelvis CT combination.; This request is for follow up to abdominal and/or pelvic trauma ordered by a specialist or PCP on behalf of a specialist who has seen the patient.; Trauma

MRE TO EVALUATE SMALL BOWEL; This study is being ordered for Inflammatory/ Infectious Disease.; 8/17/2010; There has been treatment or conservative therapy.; SEVERE ABDOMINAL PAIN, LOWER QUADRANT BOTH IN THE RIGHT SIDE AND LEFT SIDE, ALSO HAS THE URGE TO STOOL, BUT HAS DIFFICULTY STOOLING,; PREDNISONE, METRONIDAZOLE, RANITIDINE, MERCAPTOPYRINE
This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This is a request for a heart or cardiac MRI

This is a request for Heart CT Congenital Studies.

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are documented clinical findings of hyperlipidemia.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

Headaches, and pain in back of head 3 months.; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

Radiology Services Denied Not Medically Necessary

Neuro / Psychiatric; Aphasia, dizziness, focal weakness, gait disturbance, lightheadedness, loss of consciousness and speech changes.; Headache.; Neuro Comments: light sensitive and trouble sleeping. pain has been constant now x 6 d, without much help fr; This study is being ordered for a neurological disorder.; 08/12/2015; There has been treatment or conservative therapy.; Reason for Study: Patient has history of Migraines with photophobia and sleep disturbance.; 1. Headache ; Onset: 1 Week. Aggravating factors include bright lights. Pertinent negatives include vomiting.; Patient has been having headaches for over ; Medications: 11/06/2015 IMITREX, 11/06/2015 TYLENOL-CODEINE NO.3,MAXALT,

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Radiology Services Denied Not Medically Necessary

; This study is being ordered for trauma or injury.; 10/12/15; There has been treatment or conservative therapy.; Pain that goes to the left home. Pain that goes from the arm to the right leg.; Pain medications, muscle relaxers, and home exercise.

Radiology Services Denied Not Medically Necessary

; This study is being ordered for trauma or injury.; 10/12/15; There has been treatment or conservative therapy.; Pain that goes to the left home. Pain that goes from the arm to the right leg.; Pain medications, muscle relaxers, and home exercise.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

Radiology Services Denied Not Medically Necessary

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Cervical spine x ray that showed degenerative disc disease

Radiology Services Denied Not Medically Necessary

6th lumbar vertebrae; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately one year ago.; There has been treatment or conservative therapy.; Severe back pain that affects normal activity that has persisted for approximately one year.; Xray showing 6 lumbar vertebrae. Negative renal u/s

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for None of the above

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

Radiology Services Denied Not Medically Necessary

6th lumbar vertebrae; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Approximately one year ago.; There has been treatment or conservative therapy.; Severe back pain that affects normal activity that has persisted for approximately one year.; Xray showing 6 lumbar vertebrae. Negative renal u/s

Radiology Services Denied Not Medically Necessary

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Neurologic deficits none; This study is being ordered for Inflammatory/ Infectious Disease.; 11/16/2015; There has been treatment or conservative therapy.; Pt experiencing swelling and pain; RX, steroids

Radiology Services Denied Not Medically Necessary

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 8/08/2014; There has not been any treatment or conservative therapy.; none

Radiology Services Denied Not Medically Necessary

possible fracture not shown on x-ray; This study is being ordered for trauma or injury.; 9/17/15; There has not been any treatment or conservative therapy.; cant walk on foot < Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/10/2015; There has not been any treatment or conservative therapy.; Patient is experiencing pain in left leg and not able to walk, knee inflexion leads to crying.

Radiology Services Denied Not Medically Necessary

This is a request for a heart or cardiac MRI

Radiology Services Denied Not Medically Necessary

This is a request for a brain/head CT.; The study is requested for Hydrocephalus or congenital abnormality.

"This request is for face, jaw, mandible CT.239.8"; "There is a history of serious facial bone or skull, trauma or injury.fct"

"This request is for face, jaw, mandible CT.239.8"; "There is not a history of serious facial bone or skull, trauma or injury.fct"; "There is suspicion of neoplasm, tumor or metastasis.fct"

This study is being ordered for follow-up to trauma.; This is a request for a Sinus CT.
This study is being ordered for pre-operative evaluation.; This is a request for a Sinus CT.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.

evaluate for sacrococcyteal osteomyelitis secondary to pressure ulcer; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

The request is for an upper extremity non-joint MRI.; This is a preoperative or recent postoperative evaluation.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; Yes, this is a confirmed breast cancer.; Yes, the results of this MRI (size and shape of tumor) affect the patient's further management.

This is a request for Breast MRI.; This study is being ordered for a suspected implant rupture.; Yes, this study is being ordered to evaluate a suspected silicone implant rupture.

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

; The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for None of the above

RULE OUT CANCER; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; FOR THE CYST ON ANKLE 6 MONTHS AGO AND BACK 6 MONTHS PLUS; There has been treatment or conservative therapy.; RADICULOPHTY PAIN; INJECTION AND MEDICATIONS

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; This procedure is being requested for Neurologic deficits
The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

chronic pain; This study is being ordered for Inflammatory/ Infectious Disease.; 12/1/2013; There has been treatment or conservative therapy.; ankle pain; orthodox and clinical instruction on stretching and how to use ice

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot CT.; The patient has used a cane or crutches for greater than four weeks.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot CT.; The patient has used a cane or crutches for greater than four weeks.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has a documented limitation of their range of motion.

This is a request for an ankle CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

This is a request for an ankle CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

xrays of foot and ankle show that there is no osseous abnormalities and the hardware from previous surgery is intact. With the patient's symptoms, need to check for non-union of ligaments.; This study is being ordered for trauma or injury.; 04/18/2013; There has been treatment or conservative therapy.; pain and swelling of both the right foot and right ankle, decrease in range of motion of right ankle; patient was given instructions for RICE therapy, over the counter anti-inflammatories. With that not helping, patient was given steroid injections. Patient agreed with surgery back 11/15/2013.; Patient returned recently with pain and swelling, limited ran

"There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a suspected tarsal coalition.; complains of ankle pain and ankles giving out.; This is a request for a bilateral ankle MRI.

"There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; This is a request for bilateral foot MRI.; pain in feet, painful when weight bearing

"There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; pt with hx of chronic bilateral foot and ankle pain and Achilles contractures; This is a request for a bilateral ankle MRI.

"There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This is a request for bilateral foot MRI.; Patient is experiencing severe pain in both feet.

"There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.; This is a request for bilateral foot MRI.; Pt is having heel pain for several years and conservative treatment is not improving pain.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for chronic pain.; The patient has had foot pain for over 4 weeks.; No treatments are underway or completed.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 11/2015; There has been treatment or conservative therapy.; pain; brace

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 12-29-2015; There has not been any treatment or conservative therapy.; Difficulty walking/ soreness

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; sept 29 2015; There has not been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

pain and swelling, bruising in the lateral calcaneus extending proximally to the left lateral ankle joint, including the peroneal tendon complex; This study is being ordered for trauma or injury.; November 21, 2015; There has been treatment or conservative therapy.; Pain and swelling in the achilles tendon area, left; pt has iced area, elevated foot and has worn a walking boot

planned surgery; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 6/12/2013; There has been treatment or conservative therapy.; large open wound; medications

Podiatric evaluation and discussion of patients presenting symptoms. Patient with continued heel, arch and now first MTP joint pain of the right foot. She is taking 1000 mg of ibuprofen a day, I suggested that she take the recommended dose and also cons; This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for plantar fasciitis.; The patient has had foot pain for over 4 weeks.; The patient has been treated with anti-inflammatory medication for at least 6 weeks.

RULE OUT CANCER; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; FOR THE CYST ON ANKLE 6 MONTHS AGO AND BACK 6 MONTHS PLUS; There has been treatment or conservative therapy.; RADICULOPHTY PAIN; INJECTION AND MEDICATIONS severe pain; x-rays done; This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is NOT being ordered for chronic pain, acute pain, rule out tarsal coalition, known or suspected septic arthritis or osteomyelitis, tendonitis, neuroma or plantar fasciitis.

SHE HAS CONTINUED PAIN NOTED OVER THE SINUS TARSII AND LATERAL SIDE OF FOOT L.; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient has an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; The study is being ordered for suspected fracture.; They had 2 normal xrays at least 3 weeks apart that did not show a fracture.; The patient has been treated with a walking cast for at least 4 weeks.

This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for chronic pain.; The patient has had foot pain for over 4 weeks.; The patient has been treated with a protective boot for at least 6 weeks.

This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for chronic pain.; The patient has had foot pain for over 4 weeks.; The patient has been treated with immobilization for at least 6 weeks.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is a suspicion of an infection.; The patient is taking antibiotics.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is a study for a fracture which does not show healing (non-union fracture).; This is a pre-operative study for planned surgery.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; There is not a suspected tarsal coalition.; The patient does not have a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient has a documented limitation of their range of motion.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient does not have an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient has a documented limitation of their range of motion.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; There is not a suspected tarsal coalition.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

UNKNOWN; This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for plantar fasciitis.; The patient has had foot pain for over 4 weeks.; The patient has been treated with orthotics for at least 6 weeks.

Unknown; This study is being ordered for trauma or injury.; September 2015; There has been treatment or conservative therapy.; Pain, burning sensation, pain from metatarsal base into peroneal tendon and up into ankle; Cast boot, xrays

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Weakness to the bottom of the foot due to the burning. Progressive type symptoms when sitting and laying down; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Radiology Services Denied Not Medically Necessary

"There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.; This is a request for bilateral foot MRI.; Patient is experiencing severe pain in both feet.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

"There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.; This is a request for bilateral foot MRI.; foot pain

Radiology Services Denied Not Medically Necessary

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has been treatment or conservative therapy.; ;

Radiology Services Denied Not Medically Necessary

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

Radiology Services Denied Not Medically Necessary

xrays show no abnormalities with bones, patient still has pain swelling and can bear limited weight on it; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for a brain/head CT.; There is a suspected or known brain tumor.; The study is requested for known or suspected brain tumor, mass or cancer.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

unknown; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as (sudden onset of 2 or more symptoms of nasal discharge, blockage or congestion, facial pain, pressure and reduction or loss of sense of smell, which are less than 12 wks in duration); It has been 14 or more days since onset

; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

Unknown; This study is being ordered for sinusitis.; This is a request for a Sinus CT.; It is unknown if the patient is immune-compromised.; The patient's current rhinosinusitis symptoms are unknown.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >; ; This is a request for neck soft tissue CT.; Surgery is NOT scheduled within the next 30 days.; The patient has a suspicious infection or abscess.

This is a request for neck soft tissue CT.; It is unknown if there has been recent trauma or other injury to the neck.; It is unknown if there is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; It is unknown if there is a suspicion of an infection or abscess.; It is unknown if this is being ordered by an ENT specialist.

This is a request for neck soft tissue CT.; There has been recent trauma or other injury to the neck.

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is suspicion of or known tumor, metastasis, lymphadenopathy, or mass.

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were normal; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

"The ordering physician is a surgeon, pulmonologist, or cardiologist."; A Chest/Thorax CT is being ordered.; This study is being ordered for vascular disease other than cardiac.

"The ordering physician IS an oncologist, surgeon, pulmonologist, cardiologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for a pre-operative evaluation.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

"There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is radiologic evidence of a lung abscess or empyema.; There is NO radiologic evidence of non-resolving pneumonia for 6 weeks after antibiotic treatment was prescribed.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

< Enter answer here - or Type In Unknown If No Info Given. >; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.;

< Describe primary symptoms here - or Type In Unknown If No Info Given >;
; "There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; They had a previous Chest x-ray.; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.; body aches, fatigue, chest discomfort, flank/lower abdominal pain,

1 cm noncalcified pulmonary nodule in the right upper lobe; centrally which is 2 mm larger when compared to the 2010 prior study. This could be related to a noncalcified granuloma with size difference; related to image slice thickness acquisition. However, A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

3 month follow up for lung nodule.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above. 3-16-2015; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

35lb weight loss in past 2 months, dyspnea on exertion; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; It is unknown if the patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

7.3 mm in size of this nodule and I think it is too small for PET resolution. A solitary pulmonary lung nodule risk calculator calculates has a malignancy risk of less than 1%. Will repeat a CT; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.

A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient does NOT have signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

Bronchiectasis without complication.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

CT Chest dated 09/10/2015: Centrilobular emphysematous change in the lungs is identified and sharply marginated lobular opacity in the left upper lobe is identified with some calcifications. One of the lobular masses measures 2.7cm x 1.3cm. in the left u; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

CT CHEST8/4/15 SUB CENTIMETER MED LYMPH NODES. 6-7 MM NODULES BILATERALL. SOME OF THEM ARE 3-4 MM.DIFFERENTIALS WAS DISCUSSED. COULD BE EXPOSURE TO FUNGAL INFECTIONS, SARCOIDOSIS IS POSSIBILITY.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

CT dated 05/19/2015: Significant interval improvement in the appearance of the lungs; with a residual 14 mm density in the left upper lobe but all nodules; are much smaller suggesting an infectious or inflammatory etiology. ; Density measured at least 23; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

CT Dated 08/10/2015: Multiple indeterminate bilateral groundglass and semisolid; pulmonary nodules, the largest measuring 1.5 cm. ; The doctor would like to repeat the CT Chest in 3-4 months to follow it radiographically.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Donald Ray Head, a 55 y.o. male is here for evaluation of copd , pt states that he was diagnosed couple of months ago by his pcp,pt states that he is been having SOB for 3 years, which is worse with exertion, humidity and improved with rest, associated w/ wheezing; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Extensive scattered lucencies identified throughout both lungs consistent with moderate emphysema. There is interstitial prominence identified throughout both lungs which has significantly worsened since the prior examinations.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for none of the above.

f/u to a chest nodule found on ct of chest done 7-13-2015; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Follow up CT Scan for Carcinoid tumor. Dr wants to ensure no new abnormalities have developed. Patient requires scan to manage progression of COPD.; "Caller is NOT SURE if there is evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

follow up on COPD three month follow up; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for none of the above.

follow up on pulmonary nodule; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for none of the above.

follow up to abnormal CT 6/2014, 2/2015; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Follow up to R/O metastatic mass as opposed to infection.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

follow up; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Lung nodule, one year follow up; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Lung Nodule; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

lung nodules are small enough to only required frequent every 3-6 month monitoring; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

mbr has nodule on lung Chest CT in 2014-4.7mm; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

mediastinal lymphadenopathy showed on 2 prior CT scans; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

multiple nodules; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

none given; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

none; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

noted solitary lung nodule monitoring 5mm nodule size only requires monitoring; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Patient has a 2mm nodule in their left lung.; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

patient has copd.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Patient has cough, weight loss, and smoking history.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

patient has moderate COPD; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Patient was previously followed for recurring exudative plural effusion, pneumonia, difficile. Reflex, constant.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Problem List Items Addressed This Visit  Cough  - patient's cough is likely due to chronic bronchitis. She has significant smoking history and continues to smoke - we encouraged smoking cessation - PFTs are ordered and agree with this to look ; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Pt is here for evaluation of pulm nodule. RLL 10mm nodule v. Thrombosed AVM.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

pt w/sarcoidosis; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

pulmonary embolism; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

pulmonary fibrosis; There is no radiologic evidence of asbestosis.; "There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is no radiologic evidence of a lung abscess or empyema.; There is no radiologic evidence of pneumoconiosis e.g. black lung disease or silicosis.; There is NO radiologic evidence of non-resolving pneumonia for 6 weeks after antibiotic treatment was prescribed.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

Pulmonary nodule; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Severe restriction noted on full PFT. Screening CT needed.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

She had CT chest 10/25/2014 for chest pain post MVA which showed innumerable small 2-5 mm non-calcified nodules and mediastinal and hilar lymphadenopathy.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

shortness of breath  Initial 10/2014 - Repeat was supposed to be 6 months later. did not have done.  Follow up from initial - monitor mass /check for changes; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Small nodule at the right lung apex in keeping with a calcified  granuloma. Additional granulomatous calcifications. Dated 09/14/15. This is a 3 month follow up scan.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

SOB; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

The patient has had a chest x-ray recently.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for hemoptysis.

The patient is 63 years old. She has a history of lung cancer and had a recent resection St. Bernards. We have been following her radiographically. The last CT Chest was performed in June 2015 and the physician requests to repeat the CT in 6 months whic; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

The patient is a 40-pack-year smoker. She's been smoking a pack a day since age of 9. She reports scough and intermittent wheezing with productive phlegm. She has shortness of breath on exertion. She likely has underlying emphysema/COPD; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

The patient is presenting new signs or symptoms.; "There is radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is NO radiologic evidence of non-resolving pneumonia for 6 weeks after antibiotic treatment was prescribed.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

The patient reports that his saturation in the doctor's office yesterday was 91% and he was referred for pulmonary evaluation. He reports dyspnea on exertion with daily cough and phlegm. He has significant family history of lung cancer his father died of ; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

The visualized upper abdominal structures again demonstrate an enlarged retroperitoneal lymph node measuring approximately 2.2 cm partially included in the study, worrisome for a pathologically enlarged lymph node.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

There is a noncalcified 3 mm right lower lobe nodule.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

There is a right anterior pneumothorax which measures approximately 1.7 cm in size. Pneumomediastinum is seen. Severe emphysema is identified.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

There is not a known inflammatory disease.; There is not a known tumor.; Patient was seen in the office in September 2014 - Report shows a 1.5 cm subcarinal node and possibly a lesion in the right base but difficult to tell because of moderate effusion. Thoracentesis was performed and PET Scan was conducted in October 2014; "The ordering physician is NOT an oncologist, surgeon, pulmonologist, cardiologist or PCP ordering on behalf of a specialist who has seen the patient."; There is no known vascular disease.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for a pre-operative evaluation.

There is radiologic evidence of non-resolving pneumonia for 6 weeks after antibiotic treatment was prescribed.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

Tobacco dependence syndrome - Patient began smoking at the age of 16 until now at 1 PPD for a 45 pack year history. Low Dose CT recommended for lung screening.; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

tobacco use, multiple nodules on lungs, last ct showed slightly irregular soft tissue density; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is 54 years old or younger.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Will obtain CT given his bx of nodule showing honey combing and fibrosis. This probably represent a nidus of fibrosis, but make sure he doesn't have UIP.; There is no radiologic evidence of asbestosis.; "There is no radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; There is no radiologic evidence of a lung abscess or empyema.; There is no radiologic evidence of pneumoconiosis e.g. black lung disease or silicosis.; There is NO radiologic evidence of non-resolving pneumonia for 6 weeks after antibiotic treatment was prescribed.; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

This study is requested to evaluate suspected pulmonary embolus.; Yes, this is a request for a Chest CT Angiography.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has not been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2014; There has not been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.; body aches, fatigue, chest discomfort, flank/lower abdominal pain,

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lung Cancer.

This is a request for a Tumor Imaging PET Scan; A nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; The solitary pulmonary nodule was identified on an imaging study in the last 30 days.; This study is being requested for Lung Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on an imaging study.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Lung Cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lung Cancer.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; The reason for ordering this study is unknown.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; This study is being ordered for evaluation of abnormal symptoms, physical exam findings, or diagnostic studies (chest x-ray or EKG) indicative of heart disease.; There has NOT been a change in clinical status since the last echocardiogram.; This is not for the initial evaluation of abnormal symptoms, physical exam findings, or diagnostic studies (chest x-ray or EKG) indicatvie of heart disease.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Left Ventricular Function.; The patient has a history of hypertensive heart disease.; There is a change in the patient's cardiac symptoms.

UNKNOWN; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 7/2015; There has been treatment or conservative therapy.; COUGH; MEDICATION

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 4 months ago; It is not known if there has been any treatment or conservative therapy.; headaches

evaluation for treatment with biopsy done 10/29/15; rise in PSA at 2.7; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

treatment planning; This is a request for a Pelvis MRI.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; An abnormality was found in the uterus.; The study is being ordered for suspicion of tumor, mass, neoplasm, or metastatic disease.

tumor; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

Assess response to treatment.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

faxing rec; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for Cervical Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Breast Cancer.; This is for evaluation of axillary lymph nodes.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient is experiencing new signs, symptoms indicating a reoccurrence of cancer or a rising CEA.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 1 PET Scans has already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; 2 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lung Cancer.; The patient has been diagnosed with NON small lung cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new sings or symptoms.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

pt has breast cancer and metastatic to the brain and has brain lesions.; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Breast Cancer.; It is unknown if this is for an evaluation of axillary lymph nodes.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

Yes, this is a request for CT Angiography of the Neck.

There is an immediate family history of aneurysm.; This is a request for a Brain MRA.
There is not an immediate family history of aneurysm.; The patient has a known aneurysm.; This is a request for a Brain MRA.

radiation therapy planning; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered due to known or suspected infection.; "The ordering physician is NOT a surgeon, gynecologist, urologist, gastroenterologist, or infectious disease specialist or PCP ordering on behalf of a specialist who has seen the patient."; "There are NO active, clinical findings or endoscopic findings of Crohn's disease, ulcerative colitis, or diverticulitis."; "There are radiographical or ultrasound findings consistent with abnormal fluid collection, pelvic abscess, pelvic inflammation or ascites."; "There are no physical findings or abnormal blood work consistent with peritonitis, pelvic inflammatory disease, or appendicitis."; This is a request for a Pelvis CT.

gludial abcess with abcess drain and bleed; This study is being ordered due to known or suspected infection.; "The ordering physician is NOT a surgeon, gynecologist, urologist, gastroenterologist, or infectious disease specialist or PCP ordering on behalf of a specialist who has seen the patient."; "There are NO active, clinical findings or endoscopic findings of Crohn's disease, ulcerative colitis, or diverticulitis."; "There are radiographical or ultrasound findings consistent with abnormal fluid collection, pelvic abscess, pelvic inflammation or ascites."; "There are no physical findings or abnormal blood work consistent with peritonitis, pelvic inflammatory disease, or appendicitis."; This is a request for a Pelvis CT.

51 yo with symptomatic uterine fibroids previously causing iron deficiency anemia. Her anemia has resolved s/p iron supplementation. She currently mainly complains of severe menorrhagia. Need MRI to assess if fibroids are pedunculated subserosal fibroid ; This is a request for a Pelvis MRI.; The request is not for any of the listed indications. This is a request for a Pelvis MRI.; The request is for evaluation of the pelvis prior to surgery or laparoscopy.

This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; Yes, this is a request for follow up to a known tumor or abdominal cancer.

radiation therapy planning; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There is a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children). This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is a preoperative or recent post-operative evaluation.

right C7 radiculopathy, therapy worsen pt pain,; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; progressing weakness on pt right side; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing or presenting symptoms of abnormal gait.

At this time, pt is not able to find a comfortable area where the pain can ease up.; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.;

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have a new foot drop.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

She is still having worsening right leg pain status post lumbar decompression, postoperative MRI only shows some scar tissue no definite nerve impingement, she still has significant right footdrop, her clinical presentation since symptoms are still class; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Suspected meniscus, tendon, or ligament injury

Radiology Services Denied Not Medically Necessary

Cervicalgia with radiation right arm pain, numbness, tingling, weakness. Previous MRI noted thickening of the C7, C8, and T1 nerve roots bilaterally. Right arm weakness with possible brachial plexus involvement. Previous cervical MRI one year ago. Rec; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; July 2014; There has been treatment or conservative therapy.; Pain in neck on right side radiating to right arm. Tingling, numbness, and weakness in right arm.; 6 weeks of physical therapy, several months of chiropractic care, ns aids and muscle relaxers for over one year.

Radiology Services Denied Not Medically Necessary

; This is a request for cervical spine MRI; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; Neck pain going down the both arms and numbness on both legs; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

This is a request for a brain/head CT.; There is a suspected or known brain tumor.; The study is requested for known or suspected brain tumor, mass or cancer.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

Suspected Scleroderma; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

This study is to be part of a Myelogram.; This is a request for a Cervical Spine CT

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; It is not known if this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; It is not known if the patient demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; Yes, this patient had a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; Trauma or recent injury; Yes, the patient have new or changing neurological signs or symptoms.; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 11/17/2015; There has been treatment or conservative therapy.; Pain in the back radiating down to the bilateral legs, numbness, restless leg syndrome, degenerative disc disease t11-10 t11-12; PT-6 weeks, It is not known if the patient has any neurological deficits.; This is a request for a thoracic spine MRI.; There has been a supervised trial of conservative management for at least 6 weeks.; The study is being ordered due to chronic back pain or suspected degenerative disease.; The patient is experiencing sensory abnormalities such as numbness or tingling.

The patient does have neurological deficits.; This is a request for a thoracic spine MRI.; The study is being ordered due to chronic back pain or suspected degenerative disease.; <Enter Additional Clinical Information>; The patient is experiencing or presenting symptoms of lower extremity weakness documented on physical exam.

This is a request for a thoracic spine MRI.; "The patient has been seen by, or the ordering physician is, a neuro-specialist, orthopedist, or oncologist."; The study is being ordered due to follow-up to surgery or fracture within the last 6 months.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 11/17/2015; There has been treatment or conservative therapy.; Pain in the back radiating down to the bilateral legs, numbness, restless leg syndrome, degenerie disc disease t11-10 t11-12; PT-6 weeks,

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for Inflammatory/ Infectious Disease.; 10-18-15; There has been treatment or conservative therapy.; inflammatory disease  rotator cuff tesr; meds

; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; extremities in weakness; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

n/a; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.; weakness in left lower extmy w/ radipothy; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; The patient does have a new foot drop.

The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; The patient does have a new foot drop.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has completed Treatment with a facet joint or epidural injection in the past 6 weeks

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

Patient is experiencing consistent back pain radiating to left leg, bone scan showed very little; evaluating more in depth with CT.; This study is being ordered for some other reason than the choices given.; This is a request for a Pelvis CT.

This is a request for a Pelvis MRI.; The request is for suspicion of joint or bone infection.

This is a request for a Pelvis MRI.; The request is for suspicion of pelvic inflammatory disease or abscess.

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is not a history of upper extremity joint or long bone trauma or injury.; This is a preoperative or recent postoperative evaluation.

; This study is being ordered for Inflammatory/ Infectious Disease.; ; There has been treatment or conservative therapy.;;

; This study is being ordered for Inflammatory/ Infectious Disease.; 56 year old female with rheumatoid arthritis involving multiple site with positive rheumatoid factor; There has been treatment or conservative therapy.; ; Methotrexate

error in processing; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >;

The request is for an upper extremity non-joint MRI.; This is a preoperative or recent postoperative evaluation.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is no suspicion of upper extremity bone or soft tissue infection.; The ordering physician is not an orthopedist.; There is not a history of upper extremity trauma or injury.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is suspicion of upper extremity bone or soft tissue infection.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is suspicion of upper extremity neoplasm or tumor or metastasis.

This is a 54-year-old Afro-American female who presents today for evaluation and treatment of previous diagnosis of rheumatoid arthritis. She states that she saw rheumatology in Texarkana many years ago who diagnosed her with rheumatoid arthritis and pla; This study is being ordered for Inflammatory/ Infectious Disease.; The patient states she has had pain for many years but did not give specific date.; There has been treatment or conservative therapy.; stiffness, swelling, and pain; ibuprofen, levothyroxine, plaquenil, sulfasalazine, ultram, victoza

This is a pleasant Caucasian man who comes in today for follow-up. He has an elevated anti-CCP though negative rheumatoid factor. He was seen initially with complaints of abnormal lab and worsening symmetrical joint pain and stiffness. Dr. Chi had challenge; This study is being ordered for Inflammatory/ Infectious Disease.; 6/24/15; There has been treatment or conservative therapy.; Pain, stiffness, and swelling; Medications including Percocet, Prednisone, Sulfasalazine, and Trazodone.

This is a very pleasant 15-year-old white female who presents today for evaluation of multiple joint pain. She states that she has pain and swelling in her hands, wrists, feet, and ankles that has been going on for about 6 months. She is a basketball player; This study is being ordered for Inflammatory/ Infectious Disease.; The patient states the symptoms started about 6 months ago which would be April 28, 2015.; It is not known if there has been any treatment or conservative therapy.; Joint pain and swelling in the extremities, muscle aches, and fatigue.

This is a very pleasant 60-year-old white female who presents today for evaluation of multiple joint pain. She says she was diagnosed with rheumatoid arthritis over 10 years ago at Little Rock diagnostic clinic, but never sought formal treatment for this; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Patient states she has been having pain for about 10 years now but has never sought treatment until now.; There has been treatment or conservative therapy.; Pain in bones of hands, feet, elbows, and shoulders.; Medication, ibuprofen, Meloxicam

; This study is being ordered for Inflammatory/ Infectious Disease.; ; There has been treatment or conservative therapy.;

error in processing; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >;

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is an orthopedist.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were normal.; The patient is experiencing joint locking or instability.

The requested study is a Shoulder MRI.; Study is being ordered for known/suspected joint infection.; The plain films were not normal.

Sara Rose is a 27 year old woman with a PMH of atopic dermatitis and bilateral tarsal tunnel syndrome who was referred to us for bilateral foot and ankle pain. She states that she has had foot and ankle pain "her whole life," but that it has gotten worse.; This is a request for a foot MRI.; The study is being ordered for foot pain.; The study is being ordered for chronic pain.; The patient has had foot pain for over 4 weeks.; The patient has been treated with anti-inflammatory medication for at least 6 weeks.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; The patient does not have a documented limitation of their range of motion.

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Non-acute Chronic Pain; Instability

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Post-operative Evaluation

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Limited range of motion; No, the member do not experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Instability

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Limited range of motion

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Swelling greater than 3 days

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.

Rheumatoid arthritis; This is a requests for a hip MRI.; The hip pain is not due to a recent injury, old injury, Chronic Hip Pain or a Mass.; The request is for hip pain.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is a suspicion of AVN.; The patient is receiving long-term steriod therapy (Prednisone or Cortisone).

This is a request for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is receiving long-term steroid therapy (Prednisone or Cortisone).; The patient has a documented limitation of their range of motion.

x-ray showing possible necrosis; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; unknown; There has been treatment or conservative therapy.; Pain ;; Medication

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study.";

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Pulmonary Hypertension.

This is a request for a Stress Echocardiogram.; None of the listed reasons for the study were selected; The member does not have known or suspected coronary artery disease

Yes, this is a request for CT Angiography of the Neck.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing fatigue or malaise.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.

"The ordering physician IS an oncologist, surgeon, pulmonologist, cardiologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for a pre-operative evaluation.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 3 weeks ago; There has not been any treatment or conservative therapy.; antibiotics

; "There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; They had a previous Chest x-ray.; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.;

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.
A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

Breast cancer , mets work up; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Ductile lobular of the right breast. Biopsy on 11/22/2015. Carcinoma.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Pt breast carcinoma, and this is for staging for surgery and then oncologist. Checking to make sure no cancer elsewhere.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

The patient has failed a course of anti-inflammatory medication or steroids.; This is a request for cervical spine MRI; There has been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; No, there is not a documented evidence of extremity weakness on physical examination.; No, there is no evidence of recent development of unilateral muscle wasting.; No, this patient did not have a recent course of supervised physical Therapy.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

This is a request for cervical spine MRI; Neurological deficits; Yes, the patient is experiencing or presenting new symptoms of upper extremity weakness.

This is a request for cervical spine MRI; There has not been a supervised trial of conservative management for at least 6 weeks.; Acute or Chronic neck and/or back pain; No, the patient does not demonstrate neurological deficits.; new onset of symptoms past two months no recent injury pain to neck to finger tips r/o radiculopathy

< Enter answer here - or Type In Unknown If No Info Given. >; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

presented with known trauma, thrown from a Horse on her buttock. Has a large black tissue type or tumor, initiating CT to find out what it is.; The patient is not undergoing active treatment for cancer.; This study is being ordered for known tumor, cancer, mass, or rule-out metastasis.; "The ordering physician is an oncologist, urologist, gynecologist, gastroenterologist or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; The patient has had 3 or fewer pelvis CTs.; This study is not being ordered for initial staging.; The patient is not presenting new signs (e.g. lab findings or imaging) or symptoms.; This is a request for a Pelvis CT.

unknown; This study is being ordered due to known or suspected infection.; "The ordering physician is a surgeon, gynecologist, urologist, gastroenterologist, or infectious disease specialist or PCP ordering on behalf of a specialist who has seen the patient."; This is a request for a Pelvis CT.

4 cm x 2 cm firm, cylindrical raised area palpated in the L groin with overlying ecchymosis; This is a request for a Pelvis MRI.; Surgery is not planned for within 30 days.; The study is being ordered for Evaluation of the pelvis prior to surgery or laparoscopy.

This is a request for a Pelvis MRI.; The request is for evaluation of the pelvis prior to surgery or laparoscopy.

This is a request for a Pelvis MRI.; The request is for suspicion of joint or bone infection.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 07/7/15; There has been treatment or conservative therapy.; left wrist pain and popping with extension; Surgery, OT (since 9 /1/15), medication

possible ligament injury; This study is being ordered for trauma or injury.; 12/9/2015; There has been treatment or conservative therapy.; pain, swelling R wrist aggravated w/use, relieved with rest.; splint

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is a history of upper extremity joint or long bone trauma or injury.

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is not a history of upper extremity joint or long bone trauma or injury.; This is a preoperative or recent postoperative evaluation.

; This study is being ordered for Inflammatory/ Infectious Disease.; ; There has been treatment or conservative therapy.; ;

Assessment-the patient clinical history and Physical examination are consistent with rt. sm. finger DIP joint pain. The differential diagnosis includes an occult mucous cyst.; The patient rt. sm. finger will be evaluated with an MRI scan. He will return t; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; noted 6 months history of pain along the radial border of right finger at the DIP joint. He describes a tender mass which is slowly grown in size.The differential dx. includes an occult mucous cyst.; There has been treatment or conservative therapy.; There is tenderness along the unlar of the DIP joint. Swelling. pain symptoms in the RT. sm. finger are aggravated when bumps the finger. pain along the radial border rt. small finger.; soft padded contraction and wrap with coban RT. sm. finger
The request is for an upper extremity non-joint MRI.; This is a preoperative or recent postoperative evaluation.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is no suspicion of upper extremity bone or soft tissue infection.; The ordering physician is an orthopedist.

The request is for an upper extremity non-joint MRI.; This is not a preoperative or recent postoperative evaluation.; There is not suspicion of upper extremity neoplasm or tumor or metastasis.; There is suspicion of upper extremity bone or soft tissue infection.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

Assessment-the patient clinical history and Physical examination are consistent with rt. sm. finger DIP joint pain. The differential diagnosis includes an occult mucous cyst. The patient rt. sm. finger will be evaluated with an MRI scan. He will return t; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; noted 6 months history of pain along the radial border of right finger at the DIP joint. He describes a tender mass which is slowly grown in size. The differential dx. includes an occult mucous cyst.; There has been treatment or conservative therapy.; There is tenderness along the unlar of the DIP joint. Swelling. pain symptoms in the RT. sm. finger are aggravated when bumps the finger. pain along the radial border rt. small finger.; soft padded contraction and wrap with coban RT. sm. finger possible ligament injury; This study is being ordered for trauma or injury.; 12/9/2015; There has been treatment or conservative therapy.; pain, swelling R wrist aggravated w/use, relieved with rest.; splint

The pain is described as chronic; The member has failed a 4 week course of conservative management in the past 3 months.; This request is for a wrist MRI.; This study is requested for evaluation of wrist pain.

The requested study is a Shoulder MRI.; "The caller indicated the study was not ordered for: Known or Suspicious Mass or Tumor with or without metastasis, Known or suspected Joint Infection, Aseptic Necrosis, Trauma, Chronic Pain, or Pre or Post operative evaluation.";

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient has a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is being ordered by the operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has experienced pain for greater than six weeks.; The patient has been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

This is a request for an upper extremity joint MRI.; The patient does not have documented weakness or partial loss of feeling in the upper extremity.; There is no history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does not have an abnormal plain film study of the joint.; The patient has not been treated with and failed a course of four weeks of supervised physical therapy.; The patient does not have a documented limitation of their range of motion.; The patient has not experienced pain for greater than six weeks.; The patient has not been treated with anti-inflammatory medication in conjunction with this complaint.; This study is not being ordered by an operating surgeon for pre-operative planning.

UNKNOWN; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; YEAR AGO; There has been treatment or conservative therapy.; PAIN AND NUMBNESS; INJECTIONS AND THERAPY

This is a request for a foot CT.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a Lower Extremity CT.; This is a preoperative or recent postoperative evaluation.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient does not have a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Suspected meniscus, tendon, or ligament injury

This is a request for a lower extremity MRI.; There is a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is a pre-operative study for planned surgery.

This is a request for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; There is a mass near the hip.; The patient has not been treated with anti-inflammatory medications in conjunction with this complaint.; This is not for pre-operative planning.; The patient does not have a documented limitation of their range of motion.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis

None; This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is not a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.

This is a request for an Abdomen CT.; This study is being ordered as a pre-op or post op evaluation.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.

This is a request for an Abdomen CT.; This study is being ordered as a pre-op or post op evaluation.; The requested study is for pre-operative evaluation.; The study is requested by a surgeon, specialist or PCP on behalf of a specialist who has seen the patient.

This is a request for an Abdomen CT.; This study is being ordered for organ enlargement.; There is evidence of organ enlargement on ultrasound, plain film, or IVP.

Yes, this is a request for CT Angiography of the abdomen.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; It is not known if a pelvic exam was performed.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 3 weeks ago; There has not been any treatment or conservative therapy.; antibiotics

(L) lower abdominal swelling, size changes-PCP says pt has an abdominal hernia. Discussed need for CT to assess as the clinical exam is uncertain. She has developed pain and swelling in the LLQ of unclear etiology. She states that she sometimes has difficulty; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have an amylase or lipase lab test.
; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.;

Assessment: #x0D; Internal and external hemorrhoids #x0D; RUQ and RLQ abdominal pain #x0D; Blood per rectum; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have an amylase or lipase lab test.
Breast cancer , mets work up; This study is being ordered for a metastatic disease.; There are 2 exams being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Clinical Notes: I would like to obtain a current CT scan to evaluate the anatomy of the recurrent hernia. He has had 2 prior operations in this area. #x0D; He may require a reoperation in this area to identify and repair the defect.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is male.; A rectal exam was not performed.

Ductile lobular of the right breast. Biopsy on 11/22/2015. Carcinoma.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist. hernia; This is a request for an abdomen-pelvis CT combination.; The reason for the study is none of the listed reasons.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.

INITIAL STAGING OF BREAST CANCER; This is a request for an abdomen-pelvis CT combination.; The reason for the study is suspicious mass or suspected tumor or metastasis.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The patient did NOT have an abnormal abdominal Ultrasound, CT or MR study.

Patient with abdominal pain and constipation with trouble passing stool that has caused flare of hemorrhoids. Rectal exam revealed rectal stricture. Area biopsied but appeared benign. Need to evaluate for any mass that may be causing rectal stricture.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is male.; A rectal exam was performed.; The results of the exam were abnormal.

periumbilical pain; This is a request for an abdomen-pelvis CT combination.; It is not known if a urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; It is not known if the pain is acute or chronic.; It is not known if this is the first visit for this complaint.; It is unknown if there has been a physical exam.; It is unknown if the patient had an Amylase or Lipase lab test.

Pt breast carcinoma, and this is for staging for surgery and then oncologist. Checking to make sure no cancer elsewhere.; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Pt has chronic Rt lower quadrant abdominal pain; Pt has had previous surgery. Not sure if it's related to that. This is for further evaluation.; This is a request for an abdomen-pelvis CT combination.; It is not known if a urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; It is not known if the pain is acute or chronic.; This is the first visit for this complaint.; It is unknown if the patient had an Amylase or Lipase lab test.

Pt has had a abdomen ct, hida scan and ultrasound , all normal. test Pt is still complaining of abdominal pain; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were abnormal.

Pt is a 46yo M with recurrent incisional hernia; ; ; Size of fascial defect is stable from previous CT scan. Had long discussion with patient on watchful waiting to see if hernia enlarges any more over the next several months. We will plan to see the pt; This is a request for an abdomen-pelvis CT combination.; The reason for the study is pre-op or post op evaluation.; The study is requested for preoperative evaluation.; Surgery is not planned for within 30 days.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.

Pt referred by PCP for RLQ pain, pt states his pain has been 7 out of 10 pretty constant pain in groin nad testicle area also. History of pt having hernia surgery in April 2015; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is male.; It is not known if a rectal exam was performed.

pt with complaints that ever since her incisional hernia surgery in May 2015, which she had a fall 1 week after surgery, she has had intermittent RUQ & RLQ pain ever since. No mass felt on exam but pt was tender on the right side of old incision; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is a request for initial staging of a known tumor other than prostate.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; The reason for the study is suspicious mass or suspected tumor or metastasis.; The patient is presenting new symptoms.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The patient had an abnormal abdominal Ultrasound, CT or MR study.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; It is not known if the requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation; Post Lap Hand assisted sigmoid colectomy on 11/4/15 with RLQ tenderness

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; The requested study is for pre-operative evaluation.; The study is requested by a surgeon, specialist or PCP on behalf of a specialist who has seen the patient.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are clinical findings or indications of Hematuria.; Other

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other;

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Abdominal pain,

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; chronic abdominal pain, anemia

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; gaul bladder abdominal pain

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; hernia

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; hernia of which they have had two in past

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; hernia.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; lower quad pain

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; PT HAS EPIASTRIC ABD PAIN AND HAS HAD ULTRASOUND THAT WAS NORMAL. ELEVATED AMYLASE AND GASTRITIS AND DIVERTICULSOS ON RECENT EGD/COLONOSCOPY. NO REASON FOR ELEVATED ENZYMES AND NO REASON FOR PAIN.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Pt is having rectal bleeding and abdominal pain. Had a normal colonoscopy on 11.03.15

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; It is not known if there are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is not a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor; Palpable and visual painful abdominal mass on left side of abdomen.

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is a request for initial staging of a known tumor other than prostate.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has been a recent previous abdominal and or pelvis CT scan.; This would be a repeat of a CT of the abdomen and or pelvis within 6 weeks.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.; Patient found to have adrenal mass on previous CT. In need of repeat to re-evaluate the mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Follow up for cancer.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Initial Staging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

unknown; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient had an amylase lab test.; The results of the lab test were normal.

Upper abdominal/ lower chest pain. worrisome mainly because of his high activity level and ability to tolerate discomfort; needs CT of chest abdomen and pelvis to rule out malignant disease, which would have been missed with ultrasound.; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; surveillance

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; transplant evaluation , having rebound tenderness , ultrasound preformed , show abnormal mass , slightly jaundice ,

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.; F/U for diverticulitis

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.; Nonspecific curvilinear hypodensity within segment VII of the liver; which measures 3.7 cm x 0.7 cm in size. This could represent a dilated; intrahepatic biliary duct. Further evaluation can be done with MRI to; evaluate.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; No, this is not a confirmed breast cancer.; No, this patient does not have axillary node adenocarcinoma.; No, there are no anatomic factors (deformity or extreme density) that make a simple mammogram impossible.

atypical lobular hyperplasia of the left breast; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; No, this is not a confirmed breast cancer.; No, this patient does not have axillary node adenocarcinoma.; No, there are no anatomic factors (deformity or extreme density) that make a simple mammogram impossible.

FINAL DIAGNOSIS:  A. LEFT BREAST CORE BIOPSIES: - TYPE OF TUMOR: INFILTRATING DUCTAL CARCINOMA. - DIFFERENTIATION: POORLY DIFFERENTIATED. - GRADE: III OUT OF III (NOTTINGHAM GRADE) TUBULE FORMATION: 3 NUCLEAR PLEOMORPHISM: 3 MITOTIC ACTIVITY: 3 T; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; It is not known if this is an individual who has known breast cancer in the contralateral (other) breast.

Has bilateral breast lesions, pathology is coming back benign but they still feel there is a malignancy.; This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are NOT benign lesions in the breast associated with an increased cancer risk.

This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There are benign lesions in the breast associated with an increased cancer risk.; There is NOT a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; Yes, this is a confirmed breast cancer.; Yes, the results of this MRI (size and shape of tumor) affect the patient's further management.

This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are benign lesions in the breast associated with an increased cancer risk.

UNKNOWN; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; It is not known if this is an individual who has known breast cancer in the contralateral (other) breast.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on something other than a diagnostic test, imaging study or biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being requested for Lymphoma or Myeloma.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Breast Cancer.; It is unknown if this is for an evaluation of axillary lymph nodes.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Lymphoma or Myeloma.; This would be the first PET Scan performed on this patient for this cancer.

; This is a request for MRCP.; There is no reason why the patient cannot have an ERCP.

Abn. cholangiogram- s/p Lap Cholecystectomy RUQ pain; This is a request for MRCP.; There is no reason why the patient cannot have an ERCP.

This is a request for MRCP.; There is a reason why the patient cannot have an ERCP.; The patient has not undergone an unsuccessful ERCP.; The patient has an altered biliary tract anatomy that precludes ERCP.

palpable mass on his neck discovered yesterday while at the dr. for another issue.; This is a request for neck soft tissue CT.; The patient has a neck lump or mass.; There is a palpable neck mass or lump.; The neck mass is 1 cm or smaller.; The neck mass has NOT been examined twice at least 30 days apart.

Yes, this is a request for CT Angiography of the Neck.

< Enter answer here - or Type In Unknown If No Info Given. >; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of stroke or aneurysm; There are not recent neurological symptoms such as one sided weakness, speech impairments, or vision defects.; There is not a family history (parent, sibling or child of the patient) of AVM (arteriovenous malformation).

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; ; There has not been any treatment or conservative therapy.;

for some time (several months) has had intermittent LUQ/left lower rib pain, like a pressure, feels "like when the baby pushes out in pregnancy", lasts 15-20 min, made worse with lifting/bending/pulling; feels better to push in on it and hold pressure; ?m; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 2-3 weeks ago; There has not been any treatment or conservative therapy.; LUQ/Left lower rib pain, pressure, worse with lifting bending and pulling

Known family history of breast cancer; This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are NOT benign lesions in the breast associated with an increased cancer risk.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 01/2015; There has been treatment or conservative therapy.; back pain & rib pain; patient has had surgery ; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

; It is not known if there is radiologic evidence of mediastinal widening.; It is not known if there is physical or radiologic evidence of a chest wall abnormality.; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for follow up trauma.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.
A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

follow up for known lung nodules - seen on CT from 3 months prior to DOS of 01/14/16; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

Unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This study is requested to evaluate suspected pulmonary embolus.; Yes, this is a request for a Chest CT Angiography.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 01/2015; There has been treatment or conservative therapy.; back pain & rib pain; patient has had surgery ; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This is a request for an abdomen-pelvis CT combination.; This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are no new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.; Pt has a confirmed breast cancer. They're checking to see if it has metastasized anywhere.

Unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

; This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There are NOT benign lesions in the breast associated with an increased cancer risk.; There is NOT a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; It is not known if this is an individual who has known breast cancer in the contralateral (other) breast.

; This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; Yes, this is a confirmed breast cancer.; No, the results of this MRI (size and shape of tumor) affect the patient's further management.

This is a request for Breast MRI.; This study is being ordered as a screening examination following genetic testing for breast cancer.; Yes, the patient have a known mutation such as BRCA1, BRCA2, PTEN or TP53.

This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There are benign lesions in the breast associated with an increased cancer risk.; There is NOT a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There is a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children).

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; No, this is not an individual who has known breast cancer in the contralateral (other) breast.; Yes, this is a confirmed breast cancer.; Yes, the results of this MRI (size and shape of tumor) affect the patient's further management.

This is a request for Breast MRI.; This study is being ordered for a known history of breast cancer.; Yes, this is an individual who has known breast cancer in the contralateral (other) breast.

This is a request for Breast MRI.; This study is being ordered for known breast lesions.; There are benign lesions in the breast associated with an increased cancer risk.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for Cervical Cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 1 PET Scans has already been performed on this patient for this cancer.

heterogeneously dense breast tissue, history of atypical lobular hyperplasia/lobular carcinoma in situ. radiology recommends 1year follow MRI.; This is a request for Breast MRI.; This study is being ordered for something other than known breast cancer, known breast lesions, screening for known family history, screening following genetic testing or a suspected implant rupture.

Yes, this is a request for CT Angiography of the Neck.

"The ordering physician IS an oncologist, surgeon, pulmonologist, cardiologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for a pre-operative evaluation.

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor. Post op Coronary artery Bypass graph; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Radiology Services Denied Not Medically Necessary

; This study is being ordered for Vascular Disease.; Unknown; There has been treatment or conservative therapy.; 1 Year Follow Up; Ruptured AAA s/p repair with endograft on 10/15/13, and stable descending thoracic ulceration.

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

; This study is being ordered for Vascular Disease.; Unknown; There has been treatment or conservative therapy.; 1 Year Follow Up; Ruptured AAA s/p repair with endograft on 10/15/13, and stable descending thoracic ulceration.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Colo-rectal Cancer.; The patient completed a course of treatment initiated within the last 8 weeks.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; Yes, the patient demonstrate neurological deficits.; yes, there is a documented evidence of extremity weakness on physical examination.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

Pt is 4 years post aneurysm embolization. there are no CT scans since 2011 to compare to.; This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.

This is a request for a brain/head CT.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for recent head trauma or injury.

This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; The patient has the inability to speak.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; The patient is NOT able to have a Brain MRI for evaluation of these symptoms.

This is a request for a brain/head CT.; The study is NOT being requested for evaluation of a headache.; The patient has the inability to speak.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.; This study is being ordered for trauma or injury.

This is a request for a brain/head CT.; The study is requested for known or suspected bleed such as subdural hematoma or subarachnoid bleed.

This is a request for a brain/head CT.; There is a suspected or known brain tumor.; The study is requested for known or suspected brain tumor, mass or cancer.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

to evaluate his pituitary functions or hypergonad; This is a request for a brain/head CT.; None of the listed reasons for the study have been selected.

"This request is for orbit,sella, int. auditory canal,temporal bone, mastoid, CT.239.8";
"There is not suspicion of bone infection, cholesteoma, or inflammatory disease.ostct";
"There is a history of serious head or skull, trauma or injury.ostct"
This study is being ordered for pre-operative evaluation.; This is a request for a Sinus CT.

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Chronic Rhinosinusitis (episode is greater than 12 weeks)

This study is being ordered for sinusitis.; This is a request for a Sinus CT.; The patient is NOT immune-compromised.; The patient's current rhinosinusitis symptoms are described as Recurrent Acute Rhinosinusitis (4 or more acute episodes per year)

This is a request for neck soft tissue CT.; There has not been recent trauma or other injury to the neck.; There is no suspicion of or known tumor, metastasis, lymphadenopathy, or mass.; There is a suspicion of an infection or abscess.
This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

Yes, this is a request for CT Angiography of the brain.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; < Enter date of initial onset here - or Type In Unknown If No Info Given >; It is not known if there has been any treatment or conservative therapy.; < Describe primary symptoms here - or Type In Unknown If No Info Given >

pt was told headaches due to monthly periods at the age of 13. Has taken several migraine meds and has been placed on meds to assist with menstrual onset before and after with no relief. pt on amerge at this time. does offer some relief but headaches are m; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; since age 13. was noted as being menstrual related. has continued and worsened; There has been treatment or conservative therapy.; headaches lasting over an hour and at least three times weekly. nausea, vomiting, sensitive to light; amerge pills for headaches. has been on several different migraine meds as well as otc meds with no relief

There is an immediate family history of aneurysm.; This is a request for a Brain MRA. There is not an immediate family history of aneurysm.; The patient does not have a known aneurysm.; The patient has not had a recent MRI or CT for these symptoms.; There has not been a stroke or TIA within the past two weeks.; This is a request for a Brain MRA.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for a neurological disorder.; 01/27/2014; There has been treatment or conservative therapy.; mbr has headaches and confusion speak problem and thoracic pain weakness and tingling in left side; medication for headache and PT and injection cervical infusion Medrol dose pack

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 2013; There has been treatment or conservative therapy.; HA, vision issues and loss of consciousness; Meds

; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has not been completed to determine tumor tissue type.; There are not recent neurological symptoms such as one-sided weakness, speech impairments, or vision defects.; There is not a new and sudden onset of headache (less than 1 week) not improved by pain medications.; The tumor is not a pituitary tumor or pituitary adenoma.

; This study is being ordered for a neurological disorder.; Mr. Daggs was not clumsy in childhood and was able to run track in high school. He first noted 5 years ago that he was starting to lose balance, he had to hold on to things more. His first fall was about 3 years ago, initially possibly going up stairs or ; There has been treatment or conservative therapy.; ; Mr. Daggs was not clumsy in childhood and was able to run track in high school. He first noted 5 years ago that he was starting to lose balance, he had to hold on to things more. His first fall was about 3 years ago, initially possibly going up stairs or

; This study is being ordered for Congenital Anomaly.; SEEN IN CLINIC 9/28/15 UNDERGOING THERAPY AT SCHOOL FOR DIFFUSE WEAKNESS IN HANDS, WEAKNESS AND LACK OF ENDURANCE ISSUES. HE WAS DELAYED WALKING AT 17 MONTHS OLD AND WAS 2-3 YEARS BEFORE SPEAKING INTELLIGIBLE WORDS. THIS WAS HIS FIRST VISIT TO HABILITATIO; There has been treatment or conservative therapy.; DECREASED MUSCLE COORDINATION, HYPOTONIA, TREMORS.; PATIENT IS UNDERGOING THERAPY AT SCHOOL BUT HAS HAD NO PREVIOUS MEDICAL STUDIES, MRI, EMGS, NERVE CONDUCTION OR X RAYS.

Abnormal MRI of the brain 5/2014 with one lesion in the left parietal region.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; Pseudo-tumor cerebri initially diagnosed in 1996 during pregnancy for severe headaches. Re-diagnosed in 2011. Abnormal brain MRI, abnormal Lumbar puncture.; It is not known if there has been any treatment or conservative therapy.; Headaches, intermittent episodes of numbness, tingling and weakness of bilateral upper extremities. Hyper-reflexia

Atrophy of pectoralis muscles on the right. Aura of headache blurred vision and decreased vision. Occipital headaches progressing to include his whole head, throbbing.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; History of migraine with aura that started after a fall and skull fracture in 1995. Multiple clavicular surgeries, neck pain, numbness and tingling in the RUE; There has been treatment or conservative therapy.; Headache, chronic neck pain, chronic RUE pain with numbness and tingling of the right hand; topiramate, tramadol

HISTORY OF T CELL LYMPOMA ON TOP OF HEAD , HEADACHES BLURRED VISION STATRED AFTER RADIATION TO HEAD; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

Hypogomadism; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is not associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results was not completed.; The patient is experiencing fatigue or malaise.

N/A; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; N/A; It is not known if there has been any treatment or conservative therapy.; N/A

none; This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of infection or inflammation; The patient does not have a fever, stiff neck AND positive laboratory findings (like elevated WBC or abnormal Lumbar puncture fluid examination that indicate inflammatory disease or an infection.; The doctor does not note on exam that the patient has delirium or acute altered mental status.; The patient does not have a Brain CT showing abscess, brain infection, meningitis or encephalitis.

pt was told headaches due to monthly periods at the age of 13. Has taken several migraine meds and has been placed on meds to assist with menstrual onset before and after with no relief. pt on amerge at this time. does offer some relief but headaches are m; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; since age 13. was noted as being menstrual related. has continued and worsened; There has been treatment or conservative therapy.; headaches lasting over an hour and at least three times weekly. nausea, vomiting, sensitive to light; amerge pills for headaches. has been on several different migraine meds as well as otc meds with no relief
This is a request for an Internal Auditory Canal MRI.; There is a suspected Acoustic Neuroma or tumor of the inner or middle ear.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; It is not known if the headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.; There are recent neurological symptoms or deficits such as one sided weakness, speech impairments, or vision defects.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as chronic or recurring.; The headache is presenting with a sudden change in severity, associated with exertion, or a mental status change.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There are NO recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is described as a “thunderclap” or the worst headache of the patient’s life.

This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; There recent neurological deficits on exam such as one sided weakness, speech impairments or vision defects.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; There is a new and sudden onset of a headache less than 1 week not improved by medications.; The headache is described as a “thunderclap” or the worst headache of the patient’s life.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The patient has Bell's Palsy.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; It is not known if the condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; A metabolic work-up done including urinalysis, electrolytes, and complete blood count with results completed.; The lab results were abnormal; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient does NOT have dizziness, fatigue or malaise, Bell's Palsy, a congenital abnormality, loss of smell, hearing loss or vertigo.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Not requested for evaluation of trauma/injury, tumor, stroke/aneurysm, infection/inflammation,multiple sclerosis, or seizures; The condition is associated with headache, blurred or double vision or a change in sensation noted on exam.; The patient is experiencing dizziness.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of Multiple Sclerosis; The patient has undergone treatment for multiple sclerosis.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has been a previous Brain MRI completed.; The brain MRI was abnormal.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of seizures; There has not been a previous Brain MRI completed.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; This study is being ordered for seizures.; There has been a change in seizure pattern or a new seizure.

WORSENING HA; This request is for a Brain MRI; The study is being requested for evaluation of a headache.; The patient has a chronic or recurring headache.

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

"The ordering physician IS an oncologist, surgeon, pulmonologist, cardiologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for a pre-operative evaluation.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

< Enter answer here - or Type In Unknown If No Info Given. >; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

; A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; It is unknown if the patient has signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor.

A Chest/Thorax CT is being ordered.; This study is being ordered for screening of lung cancer.; The patient is between 55 and 80 years old.; This patient is a smoker or has a history of smoking.; The patient has a 30 pack per year history of smoking.; The patient did NOT quit smoking in the past 15 years.; The patient does NOT have signs or symptoms suggestive of lung cancer such as an unexplained cough, coughing up blood, unexplained weight loss or other condition.; The patient has NOT had a Low Dose CT for Lung Cancer Screening or a Chest CT in the past 11 months.

A Chest/Thorax CT is being ordered.; This study is being ordered for suspected pulmonary Embolus.

follow up nodules; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

N/A; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

Shortness of breath. History of lung disease. Smoker; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

The last chest CT was performed within the last 6 months.; There is no radiologic evidence of non-resolving pneumonia.; Pulmonary cryptococcosis - Asymptomatic but she has multiple nodules on her CT scan. Blood culture negative. Cryptococcal antigen was positive.; The patient is NOT presenting new signs or symptoms.; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; "There is radiologic evidence of sarcoidosis, tuberculosis or fungal infection."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

There is radiologic evidence of non-resolving pneumonia after at least 4 weeks of treatment.; "The ordering physician is NOT a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

Abnormal Chest Xray in our office shows possible infiltrate.; This study is not requested to evaluate suspected pulmonary embolus.; This study will not be performed in conjunction with a Chest CT.; This study is being ordered for another reason besides Known or Suspected Congenital Abnormality, Known or suspected Vascular Disease.; Yes, this is a request for a Chest CT Angiography.

New patient referred by Dr. Wong to eval of afib and to discuss afib Ablation. He is on Coumadin and Amio. Pt reports that he was Dx'd in 2003 with Afib - had AF ablation at CCF 8/2011, says out of rhythm since. Now persistent - tried on sotalol, Tikosyn, a; This study is not requested to evaluate suspected pulmonary embolus.; This study will not be performed in conjunction with a Chest CT.; This study is being ordered for Known Vascular Disease.; It is not known if this is a pre-operative evaluation, post operative evaluation or follow up to a previous angiogram or MR angiogram.; Yes, this is a request for a Chest CT Angiography.

This study is requested to evaluate suspected pulmonary embolus.; Yes, this is a request for a Chest CT Angiography.

The patient does not have any neurological deficits.; This study is not to be part of a Myelogram.; This is a request for a Cervical Spine CT; This study is being ordered due to chronic neck pain or suspected degenerative disease.; There has been a supervised trial of conservative management for at least 6 weeks.; There is a reason why the patient cannot have a Cervical Spine MRI.

degeneration in the disc at L4-5; This study is being ordered for trauma or injury.; 12/2011; There has been treatment or conservative therapy.; radiating pain in the extremities; 02/2015

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is experiencing symptoms of radiculopathy for six weeks or more.

This is a request for a lumbar spine CT.; The patient does not have a history of severe low back trauma or lumbar injury.; This is not a preoperative or recent postoperative evaluation.; This study is not part of a myelogram or discogram.; The patient is not experiencing symptoms of radiculopathy for six weeks or more.; There is no neurologic symptoms of bowel or urinary bladder dysfunction.; There is no suspicion of lumbar spine infection.; There is no suspicion of lumbar spine neoplasm or tumor or metastasis.

This is a request for a lumbar spine CT.; The patient has a history of severe low back trauma or lumbar injury.

< Enter answer here - or Type In Unknown If No Info Given. >; This study is being ordered for trauma or injury.; 2013; There has been treatment or conservative therapy.; HA, vision issues and loss of consciousness; Meds ; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; There is not x-ray evidence of a recent cervical spine fracture.

; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does have new or changing neurologic signs or symptoms.; There is weakness.;
; The patient does not have new signs or symptoms of bladder or bowel dysfunction.;
There is not x-ray evidence of a recent cervical spine fracture.

; This is a request for cervical spine MRI; Acute or Chronic neck and/or back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; It is not known if the physician has directed conservative treatment for the past 6 weeks.

; This study is being ordered for a neurological disorder.; Mr. Daggs was not clumsy in childhood and was able to run track in high school. He first noted 5 years ago that he was starting to lose balance, he had to hold on to things more. His first fall was about 3 years ago, initially possibly going up stairs or ; There has been treatment or conservative therapy.; ; Mr. Daggs was not clumsy in childhood and was able to run track in high school. He first noted 5 years ago that he was starting to lose balance, he had to hold on to things more. His first fall was about 3 years ago, initially possibly going up stairs or

degeneration in the disc at L4-5; This study is being ordered for trauma or injury.; 12/2011; There has been treatment or conservative therapy.; radiating pain in the extremities; 02/2015

Mr. Masters has a lumbar fracture we need to rule out cervical and thoracic spine fractures as well.; This study is being ordered for trauma or injury.; 10/24/15; It is not known if there has been any treatment or conservative therapy.; back pain, neck pain, low back pain

Pain starts in the LS passage and then radiated to the left buttock, post thigh and the left leg and ankle. The left toes tingle. Has done treatment with chiropractor, message therapist, PT, did PT for more than 6 weeks, has steroid IM with no results; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Physical Exam Findings: pt complaining of right middle back pain with right radicular pain into hip has failed chiropractic and physical therapy, back does not seem to be improving. Pain described as stabbing and worsening tender to palpation, decreased ROM; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is no weakness or reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

Pt has had continuous pain for 5 weeks, no relief from Chiropractor. He has neurological symptoms, abnormal reflex, and noted tenderness over the L5-S1 vertebra; The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does have new or changing neurologic signs or symptoms.; There is reflex abnormality.; The patient does not have new signs or symptoms of bladder or bowel dysfunction.; The patient does not have a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.; Pt has been having Low Back Pain x 5 weeks. he has been going to Chiropractor x 4 weeks. He has abnormal reflexes (unable to heel walk on his left foot); decreased range of motion, painful movements, Flexion restricted and painful.; Pt has noted tenderne

Pt is in constant pain, has even had back surgery. This study will help us determine the most effective treatment plan needed for patient's health and well being. .; The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has none of the above

pt is not improving with NSAIDs and physical therapy.; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 07-16-15; There has been treatment or conservative therapy.; She reports back pain. Reports pain is from the thoracic to the Lumbar Spine midline.; 6 weeks of physical therapy and NSAID therapy.

The MRI Lumbar Spine that was requested for dos 10/07/15 was denied and never done. Patient has since completed 6 weeks of physical therapy with Heber Baptist Health. &#xOD; Patient has low back pain radiating to her bilateral legs, worse on the right. Her Xra; The study requested is a Lumbar Spine MRI.; Neurological deficits; The patient does have new or changing neurologic signs or symptoms.; It is not known if there is weakness or reflex abnormality.; It is not known if the patient has new signs or symptoms of bladder or bowel dysfunction.; It is not known if the patient has a new foot drop.; There is not x-ray evidence of a recent lumbar fracture.

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; It is not known if the patient does have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

The study requested is a Lumbar Spine MRI.; Acute or Chronic back pain; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; The physician has directed conservative treatment for the past 6 weeks.; The patient has not completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient was treated with oral analgesics.; The patient has completed 6 weeks or more of Chiropractic care.

The study requested is a Lumbar Spine MRI.; The patient does NOT have acute or chronic back pain.; The patient has Neurological abnormalities; This procedure is being requested for Trauma or recent injury

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has 6 weeks of completed conservative care in the past 3 months or had a spine injection

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has Neurological deficit(s)

He was seen 3 months ago for pain in the right pelvis, groin and testicle. He had hernia repair on that side with similar symptoms. A scrotum ultrasound was ordered which was basically normal, just a trace hydrocele on the right. He was referred to ge; This study is being ordered for some other reason than the choices given.; This is a request for a Pelvis CT.

; This is a request for a Pelvis MRI.; The study is being ordered for something other than suspicion of tumor, mass, neoplasm, metastatic disease, PID, abscess, Evaluation of the pelvis prior to surgery or laparoscopy, Suspicion of joint or bone infect

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?

This is a request for a Pelvis MRI.; The study is being ordered for endometriosis.; A diagnosis of endometriosis been established.; The patient had a previous abnormal Ultrasound.

This is a request for an upper extremity, shoulder, scapula, elbow, hand, or wrist joint CT.; There is a history of upper extremity joint or long bone trauma or injury.

The request is for an upper extremity non-joint MRI.; This is a preoperative or recent postoperative evaluation.

; The requested study is a Shoulder MRI.; The pain is described as chronic; The request is for shoulder pain.; The physician has not directed conservative treatment for the past 6 weeks.

; This study is being ordered for trauma or injury.; ; There has been treatment or conservative therapy.; ;

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is an orthopedist.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; The patient has a documented limited range of motion on physical examination.; There is no documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has completed and failed a course of conservative treatment of at least 4 weeks.; The ordering physician is not an orthopedist.; There is documented findings of severe pain on motion.

The requested study is a Shoulder MRI.; Study being ordered due to non-acute or chronic pain.; The patient has not completed and failed a course of conservative treatment of at least 4 weeks.; Have tried conservative treatment for 10 days and the patient has not had any improvement of symptoms. Tenderness to palpitation and unable to lift laterally . Has been wearing sling and shows no improvement

The requested study is a Shoulder MRI.; Study being ordered due to trauma within past 72 hours.; The patient has had recent plain films of the shoulder.; The plain films were normal.; The patient is experiencing joint locking or instability.

The requested study is a Shoulder MRI.; The pain is from a recent injury.; There is a suspicion of fracture not adequately determined by x-ray.; The request is for shoulder pain.; There is not a suspicion of tendon, ligament, rotator cuff injury or labral tear.

This is a request for an upper extremity joint MRI.; The patient does have documented weakness or partial loss of feeling in the upper extremity.; There has been a history of significant trauma, dislocation or injury to the joint within the past 6 weeks.; The patient does have an abnormal plain film study of the joint.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This is a request for a foot CT.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

; This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The results of the plain films is not known.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Pain greater than 3 days; It is not known if patient has completed and failed a course of conservative treatment.

; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has not directed conservative treatment for the past 6 weeks.

Mid-October began having (l) knee pain. 4 weeks of PT without relief of pain.; This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from a recent injury.; It is not known if there is a suspected meniscus, tendon, or ligament injury.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; It is not known if there is a suspicion of fracture not adequately determined by x-ray.

right achillis tendonitis. right ankle pain due to fall he had on July 2015. xrays showed a calcaneous fracture.; This is a request for an Ankle MRI.; Surgery or arthroscopy is not scheduled in the next 4 weeks.; The study is requested for ankle pain.; There is a suspicion of tendon or ligament injury.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is a suspected tarsal coalition.

This is a request for a foot MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is a history of new onset of severe pain in the foot within the last two weeks.; The patient has a documented limitation of their range of motion.

This is a request for a foot MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the foot."; There is not a suspected tarsal coalition.; There is not a history of new onset of severe pain in the foot within the last two weeks.; The patient does not have an abnormal plain film study of the foot other than arthritis.; The patient has not used a cane or crutches for greater than four weeks.; The patient has not been treated with and failed a course of supervised physical therapy.; The patient has been treated with anti-inflammatory medications in conjunction with this complaint.; This is for pre-operative planning.; The patient has a documented limitation of their range of motion.

This is a request for a Knee MRI.; The ordering physician is an orthopedist.; Suspected meniscus, tendon, or ligament injury

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Locking

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Non-acute Chronic Pain; Swelling greater than 3 days

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; It is not known if there is a known trauma involving the knee.; Limited range of motion; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Swelling greater than 3 days; No, the member do not experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Instability

This is a request for a Knee MRI.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; Yes, there is a known trauma involving the knee.; Swelling greater than 3 days

This is a request for a Knee MRI.; The patient had recent plain films of the knee.; The plain films were not normal.; The ordering physician is not an orthopedist.; Suspected meniscus, tendon, or ligament injury; No, there is no known trauma involving the knee.; Pain greater than 3 days; Yes, the member experience a painful popping, snapping, or giving away of the knee.

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is described as chronic; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; It is not known if the patient has completed 6 weeks of physical therapy?; The patient has been treated with medication.; The patient received joint injection(s).

This is a request for a Knee MRI.; The study is requested for knee pain.; The pain is from an old injury.; The physician has directed conservative treatment for the past 6 weeks.; The patient has completed 6 weeks of physical therapy?

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."

This is a request for a lower extremity MRI.; This is not a pulsatile mass.; "There is no evidence of tumor or mass from a previous exam, plain film, ultrasound, or previous CT or MRI."; There is not a suspicion of an infection.; The patient is not taking antibiotics.; This is not a study for a fracture which does not show healing (non-union fracture).; This is not a pre-operative study for planned surgery.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is not a history of new onset of severe pain in the ankle within the last two weeks.; The patient had an abnormal plain film study of the ankle other than arthritis.; There is not a suspected tarsal coalition.; The patient does not have a documented limitation of their range of motion.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is a suspected tarsal coalition.

This is a request for an Ankle MRI.; "There is not a history (within the past six weeks) of significant trauma, dislocation, or injury to the ankle."; There is a history of new onset of severe pain in the ankle within the last two weeks.; There is not a suspected tarsal coalition.; The patient has a documented limitation of their range of motion.
This is a requests for a hip MRI.; The member has failed a 4 week course of conservative management in the past 3 months.; The hip pain is due to an old injury.; The request is for hip pain.

This is a requests for a hip MRI.; This study is not being ordered in conjunction with a pelvic MRI.; "There is no a history (within the last six months) of significant trauma, dislocation, or injury to the hip."; There is not a suspicion of AVN.; The patient is not receiving long-term steroid therapy (Prednisone or Cortisone).; The patient does not have an abnormal plain film study of the hip other than arthritis.; The patient has used a cane or crutches for greater than four weeks.; The patient has a documented limitation of their range of motion.

; This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; No, this is not a request for follow up to a known tumor or abdominal cancer.; This study being ordered for a palpable, observed or imaged abdominal mass.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

left upper quad pain; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis

see attached clinicals. is post nephrectomy for the cancer..; This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; No, this is not a request for follow up to a known tumor or abdominal cancer.; This study is ordered for something other than staging of a known tumor (not prostate, known prostate CA with PSA > 10, abdominal mass, Retroperitoneal mass or new symptoms including hematuria with known CA or tumor.

Severe Ulcerative colitis, inflamed rectum and colon unable to pass endoscopy, abdominal pain; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc..; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis
This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Follow up treatment for cancer; Imaging studies have not been performed on the member in the past 3 months.

; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have been performed on the member in the past 3 months.

46-year-old female with a history of depression, PTSD, cervical disk disease presents for re-evaluation of abdominal pain. She was initially seen approximately 1 month ago with a 2 week history of right upper quadrant pain radiating to the right lower qua; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were normal.; The patient did not have an Ultrasound.

mild persistent RLQ pain radiates to back, elevated white count x 3 days, low grade temp of 99,WBC-14,00 R/O:APPENDICITIS; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

patient came into office with severe right side back/flank pain and hematuria.; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is male.; A rectal exam was not performed.

Patient is a 35 y.o. female with left groin pain/tenderness referred to clinic for lipoma. No evidence of lipoma on physical exam; however, pt is very tender to palpation. -- Will obtain CT abd/pelvis to assess for possible inguinal hernia -- F/u pending; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have an amylase or lipase lab test.

Pt has hematuria with recurring UTI, bladder pain. Need CT; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were abnormal.

Pt with history of and current Kidney Stones. Has flank pain and back pain; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is male.; A rectal exam was not performed.

Reason for Study: evaluate for patient's ongoing pain and rule out enlarged liver, labs showed positive for hep c, Duration of Symptoms: Start: 08/03/2015 Physical Exam Findings: abdominal distention, nausea, vomiting, abdominal tenderness; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is a known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is no abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There are new signs or symptoms including hematuria, presenting with known cancer or tumor.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; There are abnormal lab results or physical findings on exam such as rebound or guarding that are consistent with peritonitis, abscess, pancreatitis or appendicitis.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; No, the patient has not been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; There are clinical findings or indications of Hematuria.; Other

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other;

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; <Enter Additional Clinical Information>

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; complaining of extreme abdominal pain, moderate tenderness in right and left Lower Quadrant.

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Left kidney is absent on MRI

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; pain llq

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; patient is diabetic and having unexpected pain but not over 75

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; Patient is in a lot of pain. Needing CT to rule out possible UTI/Kidney Stone

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; This is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/oncologist.; The diagnosis of cancer or tumor has not been established.; Other tests such as laboratory or ultrasound or patient symptoms indicate that the cancer may be present or reoccurring.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; NM Hida With EF NM150769947 10/02/2015 9:20 AM Wallace S Hoke, MD   Reason For Exam Nausea, vomiting      Report Final  EXAM: NM HIDA W EF CLINICAL: NAUSEA, VOMITING, Nausea with vomiting, unspecified COMPARISON None. TECHNICAL Patien

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; A liver abnormality was found on a previous CT, MRI or Ultrasound.; There is suspicion of metastasis.

The patient does not have three or more of the following conditions: age over 50, diabetes, history of hypertension, history of LDL cholesterol above 130, history of HDL cholesterol below 35, obesity (BMI above 35), and/or active history of smoking.; This request is for a Coronary CT Angiography study.; No, patient did not have a Nuclear Cardiology study within the past six months.; This study is being ordered for suspected Coronary Artery Disease (CAD) and symptomatic?; No, patient does not have new onset congestive heart failure.; _____ CURRENT DIAGNOSES 1. Nonrheumatic aortic valve disorder, unspecified 2. Dilated cardiomyopathy 3. Supraventricular tachycardia 4. Atrial premature depolarization 5. Palpitations 6. Other chest pain 7. Chest pain; Yes, there is Chronic Chest Pain.

This is a request for Breast MRI.; This study is being ordered as a screening examination for known family history of breast cancer.; There is a pattern of breast cancer history in at least two first-degree relatives (parent, sister, brother, or children). This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

New patient referred by A. Simmons to eval afib. Pt is on ASA for stroke prevention. He reports that he thinks that he has had afib for a while. Pt reports that he feels a "quiver" every once in a while. Occasional dizziness.; The study is being ordered for suspected CAD.; The patient is not presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had a recent non-nuclear stress test.; The patient had a recent abnormal EKG consistent with CAD.; The patient has not had a recent stress echocardiogram.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; The patient is male.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The patient is not diabetic.; The patient is less than 45 years old.; The patient has had a recent exercise treadmill test that was positive.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The study is being ordered for suspected CAD.; The patient is not presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had a recent non-nuclear stress test.; The patient had a recent abnormal EKG consistent with CAD.; The patient has not had a recent stress echocardiogram.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; The patient is female.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; There are no documented clinical findings of hyperlipidemia.; The patient has not had a recent non-nuclear stress test.; This patient is clinically obese or has an emphysematous chest configuration.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has a physical limitation to exercise.

N/A; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; N/A; It is not known if there has been any treatment or conservative therapy.; N/A

This is a request for a Tumor Imaging PET Scan; This study is being ordered for initial treatment (after a diagnosis of Cancer has been made).; This study is being requested for Head/Neck Cancer.; The patient does NOT have Thyroid or Brain cancer.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 4 PET Scans have already been performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Head/Neck Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.; The patient does NOT have Thyroid or Brain cancer.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for another reason; The reason for ordering this study is unknown.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Heart Failure; There has been a change in clinical status since the last echocardiogram.; This is NOT for the initial evaluation of heart failure.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Heart Failure; This is for the initial evaluation of heart failure.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Left Ventricular Function.; The patient does not have a history of a recent heart attack or hypertensive heart disease.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Left Ventricular Function.; The patient has a history of hypertensive heart disease.; There is NOT a change in the patient's cardiac symptoms.; It has NOT been at least 24 months since the last echocardiogram was performed.

This a request for an echocardiogram.; This is a request for a Transthoracic Echocardiogram.; This study is being ordered for Evaluation of Pulmonary Hypertension.

This is a request for a Stress Echocardiogram.; None of the listed reasons for the study were selected; It is not known if the member has known or suspected coronary artery disease.

; This is a request for a brain/head CT.; The study is being requested for evaluation of a headache.; The headache is described as sudden and severe.; The patient has dizziness.; The patient had a recent onset (within the last 4 weeks) of neurologic symptoms.

; This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are no recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

NAUSEA PERIUMBILICAL PAIN EPIGASTRIC PAIN FLATULENCE; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is male.; It is not known if a rectal exam was performed.

Radiology Services Denied Not Medically Necessary

Pt hurts when she coughs and sneezes in umbilical area. She states she has a knot near umbilical area, and it is more pronounced after she eats. She had a Lap. Chole in April 2015. Dr. Nawar could not feel anything, but her abdomen is obese so he needs th; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other;

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement; organ enlargement from physical exam

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement; testicular swelling over 1 week

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; The caller indicated that the study was not ordered for: Known or suspected coronary artery disease, post myocardial infarction evaluation, pre operative or post operative (Cardiac surgery, angioplasty or stent) evaluation.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has 3 or more cardiac risk factors; The study is requested for congestive heart failure.; The study is requested for suspected coronary artery disease.; The member has known or suspected coronary artery disease.; The BMI is 30 to 39

Radiology Services Denied Not Medically Necessary

; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient has not had other testing done to evaluate new or changing symptoms.; The study is not requested for pre op evaluation, cardiac mass, CHF, septal defects, or valve disorders.; There are new or changing cardiac symptoms including atypical chest pain (angina) and/or shortness of breath.; There is known coronary artery disease, history of heart attack (MI), coronary bypass surgery, coronary angioplasty or stent.; The member has known or suspected coronary artery disease.; The BMI is 30 to 39

Radiology Services Denied Not Medically Necessary

chedule Cardiolute stress test, the patient has multiple risk factors for coronary disease including premature family history of coronary disease including CABG in 2 of her brothers, personal history of diabetes/hypertension / dyslipidemia /mild obesity; ; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.

Radiology Services Denied Not Medically Necessary

chest pain on exertion and shortness of breath; The patient is not diabetic.; The patient is less than 45 years old.; The patient has not had a recent exercise treadmill test that was positive.; The patient has NONE of the following: heart transplant, aortic aneurysm, carotid artery narrowing or stenosis, and/ or peripheral vascular disease or narrowed blood vessels in the legs.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

follow up after stints; The study is being ordered for known CAD.; The patient is not presenting new symptoms of chest pain or increasing shortness of breath.; The patient has not had a recent non-nuclear stress test.; The patient had a recent abnormal EKG consistent with CAD.; The patient has not had a recent stress echocardiogram.; This patient had a previous cardiac surgery or angioplasty.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; The patient is male.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Breast Cancer.; The study is NOT being ordered after completing a course of treatment initiated in the last 8 weeks or because they are experiencing new signs or symptoms.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for subsequent treatment.; This study is being requested for Lymphoma or Myeloma.; The patient is experiencing new signs or symptoms indicating a reoccurrence of cancer.; 3 PET Scans have already been performed on this patient for this cancer.

This is a request for a brain/head CT.; There is headache not improved by pain medications.; "There are recent neurological symptoms or deficits such as one-sided weakness, vision defects, speech impairments or sudden onset of severe dizziness."; The study is requested for headache.

This is a request for a brain/head CT.; There is not a suspected or known brain tumor.; The patient currently has cancer.; There is a recurrence or metastasis.; The study is requested for known or suspected brain tumor, mass or cancer.

This request is for a Brain MRI; The study is NOT being requested for evaluation of a headache.; Requested for evaluation of tumor; A biopsy has been completed to determine tumor tissue type.

"The ordering physician IS a surgeon, pulmonologist or PCP ordering on behalf of a specialist who has seen the patient."; A Chest/Thorax CT is being ordered.; This study is being ordered for known or suspected inflammatory disease or pneumonia.

"There IS evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

A Chest/Thorax CT is being ordered.; This study is being ordered for known tumor. INTIAL STAGING FOR PROSTATE CANCER; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

LUNG LESION; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

LUNG NODULE; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

n.a; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Patient has dx of renal cell carcinoma. She had a right nephrectomy in September 2015. Scan is being done for surveillance and is being ordered by a urologist; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Patient was diagnosed with renal cell carcinoma in 2011. He had a nephrectomy at this time but has not been followed for metatstacic disease since; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Patient was recently diagnosed with prostate cancer. Scan is being done for initial staging and is being ordered by a urologist to determine treatment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

patient was recently diagnosed with prostate cancer. Scan is being done to check for metastasis; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Primary malignant neoplasm of bladder - Stage I, grade II transitional cell carcinoma of bladder; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Prostate Cancer / T2A Prostate Niglel at Left Apex/ elevated PSA (4.6) 8/11/2015 / family history Metastatic Prostate Cancer; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

PROSTATE CANCER; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

SURVEILLANCE FOR TESTICULAR CANCER; A Chest/Thorax CT is being ordered.; The study is being ordered for none of the above.; This study is being ordered for non of the above.

The patient has a diagnosis of adenocarcinoma of the right kidney. He underwent a nephrectomy in May 2014. Scan is being ordered by a urologist for periodic surveillance; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

this pt is a known smoker has history of kidney cancer and pulmonary nodules. also this is f/u after tx; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

The study requested is a Lumbar Spine MRI.; It is unknown if the patient has acute or chronic back pain.; This procedure is being requested for Known or suspected tumor with or without metastasis

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal nerve study involving the lumbar spine

The study requested is a Lumbar Spine MRI.; The patient has acute or chronic back pain.; The patient has an Abnormal x-ray indicating a significant abnormality

; The patient is undergoing active treatment for cancer.; This study is being ordered for known tumor, cancer, mass, or rule-out metastasis.; "The ordering physician is an oncologist, urologist, gynecologist, gastroenterologist or surgeon or PCP ordering on behalf of a specialist who has seen the patient."; This study is not being ordered for initial staging.; This is a request for a Pelvis CT.

pt has a groin mass that is not a hernia. He has had a scrotal ultrasound that was negative; This study is being ordered because of a suspicious mass/ tumor.; "The patient has had a pelvic ultrasound, barium, CT, or MR study."; This is a request for a Pelvis CT.; There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor.

pt has bladder pain; This study is being ordered due to known or suspected infection.; "The ordering physician is a surgeon, gynecologist, urologist, gastroenterologist, or infectious disease specialist or PCP ordering on behalf of a specialist who has seen the patient."; This is a request for a Pelvis CT.

; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

1. Malignant Leydig cell tumor of testis; C62.90: Malignant neoplasm of unspecified testis, unspecified whether descended or undescended; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Abnormal CT, and abnormal ultrasound; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

patient has an elevated PSA; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

Prostate cancer; This is a request for a Pelvis MRI.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; An abnormality was found in something other than the bladder, uterus or ovary.; The study is being ordered for suspicion of tumor, mass, neoplasm, or metastatic disease.

pt had prostate bx elevated PSA; This is a request for a Pelvis MRI.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; An abnormality was found in something other than the bladder, uterus or ovary.; The study is being ordered for suspicion of tumor, mass, neoplasm, or metastatic disease.

pt has large mass found on CT in abdomen; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/09/2015; It is not known if there has been any treatment or conservative therapy.; unknown

R/O DISEASE; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This is a request for a Pelvis MRI.; The request is for suspicion of pelvic inflammatory disease or abscess.

This is a request for a Pelvis MRI.; The request is for suspicion of tumor, mass, neoplasm, or metastatic disease?
unknown; This is a request for a Pelvis MRI.; The request is not for any of the listed indications.

history of renal cell cancer , cyst on kidney; This is a request for an Abdomen CT.; This study is being ordered as a pre-op or post op evaluation.; The requested study is for post-operative evaluation.; The requested study is not a first follow up study for a post operative complication.

LIVER LESION; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis

NONE; This is a request for an Abdomen CT.; This study is being ordered for another reason besides Kidney/Ureteral stone,  Known Tumor, Cancer, Mass, or R/O metastases, Suspicious Mass or Tumor, Organ Enlargement,  Known or suspected infection such as pancreatitis, etc.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis
This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; This is a request for initial staging of a known tumor other than prostate.; No, this is not a request for follow up to a known tumor or abdominal cancer.

This is a request for an Abdomen CT.; This study is being ordered for a known tumor, cancer, mass, or rule out metastases.; Yes, this is a request for follow up to a known tumor or abdominal cancer.

This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.

This is a request for an Abdomen CT.; This study is being ordered for a suspicious mass or tumor.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is male.; It is not known if a rectal exam was performed. ; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were normal.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; It is unknown if the patient had an Amylase or Lipase lab test.

56 y.o. female with solid nearly 5 cms adrenal mass, clinically inactive. Pt had nephrolithiasis in June and underwent a CT of abdomen and pelvis where a uterine mass was discovered as an incidental finding. Recent US shows 2 fibroids with the largest me; This is a request for an abdomen-pelvis CT combination.; The reason for the study is suspicious mass or suspected tumor or metastasis.; The patient is not presenting new symptoms.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The last Abdomen/Pelvis CT was performed within the past 10 months.; The patient had an abnormal abdominal Ultrasound, CT or MR study.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.

Benign essential microscopic hematuria (R31.1). negative cystoscopy. Negative hematuria profile. The patient had the following test(s) completed today URINALYSIS 12/02/2015.  Other microscopic hematuria (R31.2). reschedule hematuria CT series. Ret; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

blood in urine, enlarged prostate; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is male.; A rectal exam was not performed.

GROSS HEMATURIA AND RECURRENT UTI; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; The results of the urinalysis were normal.

GROSS HEMATURIA; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; The results of the urinalysis were normal.

kidney stone; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

KIDNEY STONES; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the study is renal calculi, kidney or ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for something other than bilirubin, ketones, nitrites, hematuria/blood, glucose or protein.

left flank pain, rule out stones; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; It is not known if the urinalysis results were normal or abnormal.; The study is being ordered for acute pain.; It is unknown if there has been a physical exam.; The patient did not have a amylase or lipase lab test.

n.a; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

New patient visit evaluation for some left-sided pain for the past week. she has been on antibiotics Levaquin 250 milligrams daily. She has had some improvement. Reportedly with blood in the urine. Urinalysis today is does show red blood cells too numero; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

Patient has dx of renal cell carcinoma. She had a right nephrectomy in September 2015. Scan is being done for surveillance and is being ordered by a urologist; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Patient was diagnosed with renal cell carcinoma in 2011. He had a nephrectomy at this time but has not been followed for metastatic disease since; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

patient was recently diagnosed with prostate cancer. Scan is being done to check for metastasis; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Primary malignant neoplasm of bladder - Stage I, grade II transitional cell carcinoma of bladder; This study is being ordered for a metastatic disease.; There are 3 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Prostate Cancer / T2A Prostate Niglel at Left Apex/ elevated PSA (4.6) 8/11/2015 / family history Metastatic Prostate Cancer; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Pt has cancer; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; It is not known if the urinalysis results were normal or abnormal.

Pt has chronic cystitis, and flank pain and kidney stone seen in previous imaging; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were abnormal.

PT HAS KIDNEY STONE AND FLANK PAIN; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

Pt has kidney stones; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the study is renal calculi, kidney or ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The results of the urinalysis were normal.

pt has known 6mm left distal stone on ct on 08/2015 and we need a follow up ct.; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the study is renal calculi, kidney or ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The results of the urinalysis were normal.

results of the ULTRA found a mass in the kidney; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were normal.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

The patient has a diagnosis of adenocarcinoma of the right kidney. He underwent a nephrectomy in May 2014. Scan is being ordered by a urologist for periodic surveillance; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; It is not know if this study is being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the hematuria is not known.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the study is renal calculi, kidney or ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has not been a physical exam.; The patient did not have a amylase or lipase lab test.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; It is unknown if the patient had an Amylase or Lipase lab test.

This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were abnormal.; The urinalysis was positive for hematuria/blood.; The study is being ordered for chronic pain.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

This is a request for an abdomen-pelvis CT combination.; Infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

This is a request for an abdomen-pelvis CT combination.; It is not known if there is a strong suspicion of kidney or ureteral stones.; This patient is experiencing hematuria.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; It is not known if there is evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement; scrotal pain and swelling. History of bilateral varicocele surgery in 2014 and 2015

This is a request for an abdomen-pelvis CT combination.; It is not known if this is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is a request for initial staging of a known tumor other than prostate.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; The hematuria is due to Renal Calculi/kidney/ ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.

This is a request for an abdomen-pelvis CT combination.; The reason for the study is suspicious mass or suspected tumor or metastasis.; The patient is not presenting new symptoms.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The last Abdomen/Pelvis CT was performed more than 10 months ago.; The patient had an abnormal abdominal Ultrasound, CT or MR study.; The patient has NOT completed a course of chemotherapy or radiation therapy within the past 90 days.

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is not a first follow up study for a post operative complication.; Pre-op or post op evaluation; post robotic right partial nephrectomy for clear cell carcinoma, abdomen pain radiating down her right flank UPJ stone at in part right side urinoma small leak follow following the surgery place a foley for help w/drainage

This is a request for an abdomen-pelvis CT combination.; There are clinical findings or indications of Hematuria.; Other

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; <Enter Additional Clinical Information>

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Abdominal pain

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; BILATERAL HYDRONEPHROSIS

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; patient is diabetic, has unexplained abdominal pain

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient underwent lithotripsy on 9/3/15. He has a followup CT scan on 9/9/15 that showed a right perinephric hematoma with active bleeding. He was admitted to the hospital and underwent surgical intervention. Scan is being ordered to evaluate status of he

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy, weight loss, abdominal pain, diabetic patient with gastroparesis; Other; RECURRENT UTI

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is neither a known nor a strong suspicion of kidney or ureteral stones.; This patient is experiencing hematuria.; Kidney/Ureteral stone

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are new symptoms including hematuria.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is a suspicion of an adrenal mass.; Suspicious Mass or Tumor

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is a request for initial staging of a known tumor other than prostate.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There has not been a recent abdominal and or pelvis CT scan.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; yes, there is a palpable or observed abdominal mass.

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is a known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases

This is a request for an abdomen-pelvis CT combination.; This is not a request for follow up of a known tumor or cancer involving both the abdomen and pelvis or if this patient is undergoing active treatment.; This is not a request for initial staging of a known tumor other than prostate.; There is an abdominal and pelvic or retroperitoneal mass that has been confirmed by previous imaging other than a CT.; There is no known prostate cancer with a PSA greater than 10.; Known Tumor, Cancer, Mass, or R/O metastases; No, there is not a palpable or observed abdominal mass.

this pt is a known smoker has history of kidney cancer and pulmonary nodules. also this is f/u after tx; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is a hematologist/ oncologist.; The diagnosis of cancer or tumor has been established.; Restaging of Cancer; Imaging studies have not been performed on the member in the past 3 months.

Unknown; This is a request for an abdomen-pelvis CT combination.; It is not known if a urinalysis has been completed.; The reason for the hematuria is not known.; It is not known if this study is being requested for abdominal and/or pelvic pain.; The study is requested for hematuria.

unknown; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

urinalysis was positive for leukocytes; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; The reason for the study is renal calculi, kidney or ureteral stone.; This study is not being requested for abdominal and/or pelvic pain.; The study is not requested for hematuria.; The results of the urinalysis were abnormal.; The urinalysis was positive for something other than bilirubin, ketones, nitrites, hematuria/blood, glucose or protein.

1. Malignant Leydig cell tumor of testis; C62.90: Malignant neoplasm of unspecified testis, unspecified whether descended or undescended; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Abnormal CT, and abnormal ultrasound; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

CT 7/1/15 f/u for Renal lesion, left flank pain and tenderness; This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; A kidney abnormality was found on a previous CT, MRI or Ultrasound.; It is unknown if the patient has a renal cyst or tumor.

pt has large mass found on CT in abdomen; This study is being ordered for something other than: known trauma or injury, metastatic disease, a neurological disorder, inflammatory or infectious disease, congenital anomaly, or vascular disease.; 11/09/2015; It is not known if there has been any treatment or conservative therapy.; unknown

R/O DISEASE; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Suspicious Renal Mass.; This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; The patient had previous abnormal imaging including a CT, MRI or Ultrasound.; A kidney abnormality was found on a previous CT, MRI or Ultrasound.; It is unknown if the patient has a renal cyst or tumor.

This request is for an Abdomen MRI.; This study is being ordered for Known Tumor.; It is not known if the study is for follow up or staging.; The patient did NOT have chemotherapy, radiation therapy or surgery in the last 3 months.; They did NOT have an Abdomen MRI in the last 10 months.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; . Cystic disease of kidney - Suspected complex cyst: 32 mm increased from 21 mm in one year.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; . Renal mass - Left, almost 5-6 cm, central-mid suspicious for renal cancer

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; 56 year old male patient with elevated PSA and family hx of prostate cancer.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; further diagnose the mass

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; Lesion of liver -

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; Patient came in to doctors office, the CT spotted something that the doctor wanted to have checked out. They had a large amount of blood in urinalysis. A lesion was spotted on their liver.

This request is for an Abdomen MRI.; This study is being ordered for suspicious mass or suspected tumor/ metastasis.; "There are documented physical findings (painless hematuria, etc.) consistent with an abdominal mass or tumor."; "The patient has had an abdominal ultrasound, CT, or MR study."; Primary malignant neoplasm of bladder - Invasive carcinoma with squamous features C67.9: Malignant neoplasm of bladder, unspecified

This request is for an Abdomen MRI.; This study is not being ordered for known tumor, suspicious mass or suspected tumor/metastasis, organ enlargement, known or suspected vascular disease, hematuria, follow-up trauma, or a pre-operative evaluation.; Unknown by caller.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a biopsy.; This study is being ordered to establish a cancer diagnosis.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on an imaging study.; This study is being ordered to establish a cancer diagnosis.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.; This would be the first PET Scan performed on this patient for this cancer.

58 y/o African American Patient has been diagnosed with prostate cancer. PSA 5.50, Gleason score- 6. Scan to be done for initial staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Radiology Services Denied Not Medically Necessary

he has prostate cancer and needs to do cancer staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

Known kidney cancer, test to see if metastasis to spine; The study requested is a Lumbar Spine MRI.; Known Tumor with or without metastasis; The patient does not have new or changing neurologic signs or symptoms.; The patient has had back pain for over 4 weeks.; The patient has seen the doctor more than once for these symptoms.; It is not known if the physician has directed conservative treatment for the past 6 weeks.; The patient has not been seen by or is not the ordering physician an oncologist, neurologist, neurosurgeon, or orthopedist.

Radiology Services Denied Not Medically Necessary

< Enter answer here - or Type In Unknown If No Info Given. >; This is a request for an abdomen-pelvis CT combination.; A urinalysis has not been completed.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; It is unknown if there has been a physical exam.; It is unknown if the patient had an Amylase or Lipase lab test. ; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for acute pain.; There has been a physical exam.; The patient is female.; A pelvic exam was performed.; The results of the exam were normal.; The patient did not have an Ultrasound.

Radiology Services Denied Not Medically Necessary

; This is a request for an abdomen-pelvis CT combination.; This study is being requested for abdominal and/or pelvic pain.; The study is being ordered for chronic pain.; This is not the first visit for this complaint.; There has been a physical exam.; The patient is female.; A pelvic exam was NOT performed.

Radiology Services Denied Not Medically Necessary

58 y/o African American Patient has been diagnosed with prostate cancer. PSA 5.50, Gleason score- 6. Scan to be done for initial staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

he has prostate cancer and needs to do cancer staging; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Radiology Services Denied Not Medically Necessary

Patient was recently diagnosed with prostate cancer. Scan is being done for initial staging and is being ordered by a urologist to determine treatment; This study is being ordered for a metastatic disease.; There are 2 exams are being ordered.; One of the studies being ordered is NOT a Breast MRI, CT Colonoscopy, EBCT, MRS, PET Scan, or Unlisted CT/MRI.; The ordering physician is not a hematologist/ oncologist.

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; CHRONIC PELVIC PAIN

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; Patient is having recurrent urinary tract infections for over 6 months. Infections are made worse with sexual activity. She has been through several courses of antibiotics with no improvement

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There are no findings of Hematuria, Lymphadenopathy,weight loss,abdominal pain,diabetic patient with gastroparesis; Other; URINARY INCONTINENCE

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is a known or a strong suspicion of kidney or ureteral stones.; Kidney/Ureteral stone

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is a suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; Suspicious Mass or Tumor

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; There is no suspicious mass found using ultrasound, IVP, Endoscopy, colonoscopy, or sigmoidoscopy.; There are no new symptoms including hematuria.; There are no new lab results or other imaging studies including ultrasound, Doppler or plain films findings.; There is not a suspicion of an adrenal mass.; It is not known if this is a request to confirm a suspicious renal mass suggested by physical exam, lab studies, IVP or ultrasound.; Suspicious Mass or Tumor; Patient's kidney has been removed this is for a follow for a previous cancer that was malignant and there is no metastasis in that area

Radiology Services Denied Not Medically Necessary

This is a request for an abdomen-pelvis CT combination.; This is a request for follow up of a known tumor or cancer involving both the abdomen and pelvis and the patient is undergoing active treatment.; Known Tumor, Cancer, Mass, or R/O metastases unknown; This is a request for an abdomen-pelvis CT combination.; A urinalysis has been completed.; This study is being requested for abdominal and/or pelvic pain.; The results of the urinalysis were normal.; It is not known if the pain is acute or chronic.; This is the first visit for this complaint.; The patient did not have a amylase or lipase lab test.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; The suspicion of cancer is based on a diagnostic/lab test.; This study is being ordered to establish a cancer diagnosis.; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is being requested for an other solid tumor.

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; This study is being ordered for something other than Breast CA, Lymphoma, Myeloma, Ovarian CA, Esophageal CA, Lung CA, Colorectal CA, Head/Neck CA, Melanoma, Soft Tissue Sarcoma, Pancreatic CA or Testicular CA.; This study is not being ordered for Cervical CA, Brain Cancer/Tumor or Mass, Thyroid CA or other solid tumor.

Radiology Services Denied Not Medically Necessary

Radiology Services Denied Not Medically Necessary

This is a request for a Tumor Imaging PET Scan; Unknown if a nodule of less than 4 centimeters has been identified on recent imaging; This study is being ordered to evaluate a solitary pulmonary nodule.; This study is being requested for Lung Cancer.

Yes, this is a request for CT Angiography of the Neck.

Repeat CT of chest 10.4 nodule seen on the previous CT 8/5.; "There is NO evidence of a lung, mediastinal or chest mass noted within the last 30 days."; A Chest/Thorax CT is being ordered.; This study is being ordered for work-up for suspicious mass.

follow up to make sure aneurysm has not returned; This study is being ordered for Vascular Disease.; 2/2012; There has not been any treatment or conservative therapy.; asymptomatic

This is a request for an Abdomen CT.; This study is being ordered for an infection such as pancreatitis, appendicitis, abscess, colitis and inflammatory bowel disease.; Yes, the patient has been seen by a specialist or are the studies being requested on behalf of a specialist for an infection.

follow up to make sure aneurysm has not returned; This study is being ordered for Vascular Disease.; 2/2012; There has not been any treatment or conservative therapy.; asymptomatic

This is a request for CT Angiography of the Abdomen and Pelvis.

This is a request for an abdomen-pelvis CT combination.; It is not known if there is evidence of organ enlargement on ultrasound, plain film, or IVP.; Organ Enlargement; BULGING, SEVERE PAIN IN RIGHT UPPER QUADRANT, NAUSEA SENSATION IN THE CENTRAL ABDOMEN, CHRONIC CONSTIPATION, ACCESS FOR HERNIA

This is a request for an abdomen-pelvis CT combination.; The requested study is for post-operative evaluation.; The requested study is a first follow up study for a post operative complication.; Pre-op or post op evaluation

Yes, this is a request for CT Angiography of the abdominal arteries.

The Pt has hypertension, dyspnea on exertion.; The study is being ordered for suspected CAD.; The patient is presenting with symptoms of atypical chest pain and/or shortness of breath.; The patient has not had previous cardiac surgery or angioplasty.; The patient has not had a recent non-nuclear stress test.; The patient's age is between 45 and 64.; The patient has not had a stress echocardiogram within the past eight weeks.; This is a request for Myocardial Perfusion Imaging (Nuclear Cardiology Study).; The patient does not have a physical limitation to exercise.
