single study

The study is being ordered for suspected CAD.;
The patient is presenting with symptoms of
atypical chest pain and/or shortness of breath.;
There are no documented clinical findings of
hyperlipidemia.; There are documented clinical
findings of hypertension.; The patient has not
had a recent non-nuclear stress test.; "Patient is
not clinically obese, nor has an emphysematous
chest configuration."; The patient's age is
between 45 and 64.; The patient has not had a
stress echocardiogram within the past eight
weeks.; This is a request for Myocardial
Perfusion Imaging (Nuclear Cardiology Study).;
The patient has a physical limitation to exercise.
